

## README for the Collective Bargaining Modeling Data

This data release accompanies USITC Publication 4889, *United States-Mexico-Canada Agreement: Likely Impact on the U.S. Economy and on Specific Industry Sectors*, USITC investigation no. TPA 105-003. The data were used to perform the collective bargaining econometric modeling analysis as described in appendix F of the report. All data included in this release come from the National Survey of Occupation and Employment (ENOE).<sup>1</sup> The data provided by ENOE were modified by removing all individuals under the age of 15, all adults who did not work in 2017, and those who did not report their union membership status. Education indicators were created using years of education, as reported by respondents and education levels categories defined for this report. The data cover 114,785 employed individuals in Mexico who report their union membership status. The included variables are listed in table 1 below.
