## Carbon Steel Wire Rod

At the time the program of steel Voluntary Restraint Agreements (VRAs) was instituted in 1984, imports of carbon steel wire rod represented about 34 percent of domestic apparent consumption. Subsequent to implementation and coincident with rising domestic production, imports fell to 27 percent of domestic apparent consumption.

Although the total quantity of imports has remained relatively constant (about 1.45 million tons) during 1985-88, imports from non-VRA origins rose 40 percent while those from VRA origins fell 20 percent. In 1988, imports from both sources were approximately equal. Several countries, which are not signatories to a VRA have emerged as important sources of carbon steel wire rod:

| Country   | Imports (net tons) |         |
|-----------|--------------------|---------|
|           | 1984               | 1988    |
| Turkey    | 0                  | 126,791 |
| Indonesia | 6,284              | 84,414  |
| Singapore | 29,579             | 81,904  |
| Taiwan    | 9,637              | 16,843  |
| Egypt     | 0                  | 11,114  |

Three VRA-signatory countries, East Germany, Brazil, and Mexico, have also emerged as larger exporters of carbon steel wire rod to the United States during 1985-88. Imports from these three countries rose 52 percent during the period to a total of 133,068 tons in 1988.

Reduced import penetration by VRA countries is a result of mainly two factors: one is that the value of the main European and Japanese currencies has fluctuated to a greater degree than the currencies of the non-VRA countries and have generally appreciated against the U.S. dollar. Another factor has been the shipments of wire rod from VRA countries for processing in non-VRA countries, and the export of the downstream products, drawn wire and fabricated wire products, to the United States as the product of the non-VRA country. Imports due to this latter factor may be reduced because of a recent decision by the Court of International Trade finding that the process of drawing wire from wire rod does not constitute "substantial transformation," thereby requiring that there be no change in the country of origin because of processing in a third country. This would cause the imports of some wire and wire products to be counted against the VRA quota limits on wire rod.

Throughout the period of import restraints, 1985-88, domestic apparent consumption of carbon steel wire rod has risen from about 4.4 million tons to 5.5 million tons, largely as a result of increased highway and building construction, and inventory building. Domestic shipments rose from about 2.9 million tons to almost 4 million tons. Domestic capacity utilization rose from 44 percent to 60 percent during the same time period. The industry has modernized the facilities for the production of wire rod, and several companies have added new production capacity.

## Preface

On April 9, 1986, at the request of the Subcommittee on Trade, Committee on Ways and Means, U.S. House of Representatives, and in accordance with the provisions of section 332(b) of the Tariff Act of 1930 (19 U.S.C. 1332(b)), the United States International Trade Commission instituted investigation No. 332-226, Monthly Reports on the Status of the Steel Industry. The purpose of the reports is to monitor developments in the steel industry through September 1989, which corresponds with the President's program of voluntary restraint arrangements (VRA's) with certain countries and regions which export steel to the United States.

### Background of VRA's

On September 18, 1984, the President determined, under section 202(b)(1) of the Trade Act of 1974, that taking "escape clause" action was not in the national economic interest (49 Federal Register 36813). The decision followed an investigation conducted by the Commission in which imports of certain steel products 1/ were found to be a substantial cause of serious injury, or threat thereof, to certain domestic industries (investigation No. TA-201-51). Instead of taking action under the statute, the President established a nine-point policy to address the concerns of the industry. Under this policy, the President directed the United States Trade Representative to negotiate voluntary restraint arrangements to cover a five year period (from October 1, 1984 through September 30, 1989) with countries whose exports to the United States had increased significantly in recent years due to an unfair surge in imports. These measures were expected to return the share of imports in the U.S. market to a more normal level of approximately 18.5 percent, excluding semifinished steel (which, subsequent Administration statements indicate, would be limited to about 1.7 million tons per year).

### Specialty steel

On July 19, 1983, the President announced his decision to grant import relief to the specialty steel industry for a period of 4 years (53 Federal Register 52897). The relief was scheduled to expire on July 19, 1987. Under the relief, quotas were put on imports of stainless steel bars, stainless steel wire rods, and certain alloy tool steel products; increased duties were imposed on stainless steel plates and stainless steel sheets and strip. On July 16, 1987, the President announced his decision to extend the import relief in the form currently in effect for a period from July 20, 1987 through September 30, 1989. Under the steel VRA's, in return for their agreement to limit exports of stainless steel plates and sheets and strip, the VRA countries were exempted

from having to pay additional duties (with the exception of Finland, whose VRA does not include stainless steel flat-rolled products); quotas were unaffected by the VRA's for all countries except the EC-10, which negotiated limits on rods, bars, and alloy tool steel as part of its VRA, Brazil whose VRA now includes the specialty steel products subject to quotas, and Austria, which included alloy tool steel in its VRA.

In this report trade data are reported in a similar format for all product categories; in the case of stainless steel bars, stainless steel rods, and certain alloy tool steel products, however, it should be noted that, except for the EC-10 and Austria, all countries are bound by quotas (see App. C for a description of the specialty steel relief provisions and implementation of modifications in specialty steel import relief).

#### Current Status of VRA's

To date VRA's have been negotiated with 19 countries and the EC (excluding Portugal and Spain, which negotiated separate agreements). The agreements have taken the form of market share arrangements and quotas, or a combination thereof. The agreements are tailored to each country, with considerable variation in the number of individual product categories subject to limitation. Following is a list of countries subject to the VRA's and estimates of their respective overall limitations on a market share basis.

### Notes on Product Coverage and Methodology

Data on foreign trade imports and exports and domestic shipments are compiled from official statistics of the U.S. Department of Commerce, and statistics of the American Iron and Steel Institute (AISI), respectively.

The products on which foreign trade data are collected correspond to those covered by the VRA's with the stainless steel wire strand (HS item 7312.10.0500), stainless steel wire rope (HS item 7312.10.5000), and those subject to limitation under separate specialty steel measures. Since the VRA's include certain fabricated products, the data may exceed that compiled by other organizations such as the AISI. The additional tonnage, however, is relatively small. In 1987 AISI reported imports of 20.4 million tons, which compares to the 20.9 million tons indicated in this report. The product categories most affected are structural shapes and units (which includes fabricated structurals in this report) and wire and wire products (which includes wire rope and wire strand).

The term EC in this report does not include Portugal and Spain, which are subject to separate VRA's.

Unit values are calculated using unrounded data. Import values are customs value. Trade data include imports under sections 9802.0060 and 9802.0080 of the Harmonized Tariff Schedules; the 9802.0060 and 9802.0080 provisions apply to U.S. merchandise which is exported, processed, and reimported into the United States.

**Appendix A**

**Definition of Certain Terms, and Description of the Products Subject  
to the Investigation**

DEFINITIONS

1. Steel.--An alloy of iron and carbon which is malleable as first cast and which contains by weight 2 percent or less of carbon. Steel may contain other elements, but iron must predominate, by weight, over each of the other elements.
2. Carbon steel.--Steel , other than chromium, which contains by weight 2 percent or less of carbon, and in which none of the elements listed below meets or exceeds the quantity, by weight, respectively indicated:
  - 1.65 percent of manganese, or
  - 0.25 percent of phosphorus, or
  - 0.35 percent of sulphur, or
  - 0.60 percent of silicon, or.
  - 0.40 percent of copper, or
  - 0.30 percent of aluminum, or
  - 0.30 percent of chromium, or
  - 0.30 percent of cobalt, or
  - 0.40 percent of lead, or
  - 0.30 percent of nickel, or
  - 0.30 percent of tungsten, or
  - 0.10 percent of any other metallic element.
3. Alloy steel.--Steel which contains any of the elements listed in definition 2 (above) in excess of its specified quantity.
  - (i) Stainless steel.--Any alloy steel which contains by weight 1.2 percent or less of carbon and 10.5 percent or more of chromium, with or without other elements.
  - (ii) Tool steel.--Alloy steel which contains the combinations of elements in the quantity, by weight, respectively indicated in Chapter XXII, subchapter III, section (viii) of the Harmonized Tariff Schedule of the United States (HTS). (See appendix B).
4. Galvanized.--Steel which has been coated or plated with zinc.
5. Hot-rolled.--Steel which has been reduced to its final thickness by heating and rolling the product at elevated temperature (usually above 2,200 ° F).
6. Cold-rolled.--Steel which has been reduced to its final thickness by rolling the product without heating it immediately prior to the rolling operation.
7. Continuous casting.--The method of producing semifinished products in which molten steel flows evenly into a caster where it is rapidly cooled, causing it to solidify directly into semifinished products such as slabs and billets.

8. Short ton. - -Two thousand (2,000) pounds.

Unlike the TSUSA system of classification, the HTS do not differentiate by dimension those steel products formerly referred to as blooms and billets, slabs and sheet bars, plate, sheet, and strip. Instead, these products are included in two larger categories: flat rolled and semifinished (described below). However, for purposes of comparability with previous tionally Reports, and in the interest of providing useful information and coverage of the steel industry, this report will continue to designate such product categories (e.g. blooms and billets, slab and sheet bars, plate, hot-rolled and cold rolled sheet, and strip). A partial basis for classification are those definitions found in Federal Register Notice 52897, December 29, 1988 (Appendix C).

9. Semifinished products include:

Continuous cast products of solid section, not presented in coils, whether or not subjected to primary hot-rolling.

Other products of solid section which have not been further worked than subjected to primary hot-rolling or roughly shaped by forging, including blanks, angles, shapes, or sections.

For the purposes of this legislation semi-finished products are classified as follows:

(i) Ingots.--Castings resulting from the solidification of molten steel and having a columnar form suitable for working by rolling or forging. Ingots are included in AISI (American Iron and Steel Institute) product group No. 1A.

(A) Carbon and certain alloy ingots; provided for in items 7206.10.0000, 7206.90.0000, 7224.10.0090 of the Harmonized Tariff Schedules of the United States (HTS).

(ii) Blooms billets. slabs. and sheet bars.--Other continuous cast products solid cross section, which have not been further worked than subjected to primary hot-rolling or roughly shaped by forging including blanks for angles, shapes or sections. These products are not presented in coils and are included in AISI product group No. 18.

(B) Carbon and certain alloy blooms and billets; provided for in items 7207.11.0000, 7207.12.0010, 7207.19.0030, 7207.19.0090, 7207.20.0025, 7207.20.75, 7207.20.0090, 7224.90.0040, 7224.90.0060, of the HTS.

(C) Carbon and certain alloy slabs and sheet bars; provided for in items 7207.12.0050, 7207.20.0045, 7224.90.0050, 7224.90.0070 of the S.
