INTRODUCTION

This is the 65th annual report of the U.S. International Trade Commission on domestic production and sales of synthetic organic chemicals and the raw materials from which they are made. The report consists of 15 sections, each covering a specified group (based principally on use) of organic chemicals as follows: Tar and tar crudes; primary products from petroleum and natural gas for chemical conversion; cyclic intermediates; dyes; organic pigments; medicinal chemicals; flavor and perfume materials; plastics and resin materials; rubber-processing chemicals; elastomers; plasticizers; surface-active agents; pesticides and related products; miscellaneous end-use chemicals and chemical products; and miscellaneous cyclic and acyclic chemicals. Data have been supplied by approximately 780 producers.

Each of the 15 sections is headed by a summary of the statistical data. The first table in each section gives statistics on products and groups of products in as great detail as is possible without revealing the operations of individual producers. Statistics for an individual chemical or group of chemicals are given only when there are three or more producers, no one or two of which may be predominant. Moreover, even when there are three or more producers, statistics are not given if there is any possibility that their publication would violate the statutory provisions relating to unlawful disclosure of information accepted in confidence by the Commission. 1

Data are reported by producers for only those items where the volume of production or sales or value of sales exceeds certain minimums. Those minimums for all sections are 5,000 pounds of production or sales or \$5,000 of value of sales with the following exceptions: Plastics and resin materials—50,000 pounds or \$50,000; pigments, medicinal chemicals, flavor and perfume materials, and rubber—processing chemicals—1,000 pounds or \$1,000. They are usually given in terms of undiluted materials; however, products of 95 percent or greater purity are considered to be 100 percent pure. Commercial concentrations are applicable for dyes, certain plastics and resins, and a few solvents; such concentrations are specifically noted.

The statistics given in this report include data from all known domestic producers of the items covered and include the total output of each company's plants, i.e., the quantities produced for consumption within the producing plant, as well as the quantities produced for domestic and foreign sale. The quantities reported as produced, therefore, generally exceed the quantities reported as sold. Some of these differences, however, are attributable to changes in inventory.

The second table in each section lists all items for which data on production or sales have been reported, by primary manufacturers, identified by manufacturers' codes. Each code consists of not more than three capital letters and is assigned on a permanent basis.

The third table in each section is a directory, alphabetized by the codes of the manufacturers reporting in that section.

Table 1 of the Appendix is a directory, alphabetized by the names of the manufacturers reporting in all sections and which includes their general corporate phone numbers and office addresses.

Table 2 of the Appendix summarizes U.S. general imports in 1981 of benzenoid intermediates and finished benzenoid products, entered under schedule 4, parts 1B and 1C, of the Tariff Schedules of the United States.

Table 3 of the Appendix lists synonymous names for cyclic intermediates. Information on synonymous names of the organic chemicals included in this report may be found in the SOCMA Handbook: Commercial Organic Chemical Names, published by the Chemical Abstracts Service of the American Chemical Society, or the Colour Index (Revised Third Edition), published jointly by the Society of Dyes and Colourists and the American Association of Textile Chemists and Colorists.

Data contained in this report are compiled primarily from Commission's questionnaires sent to domestic producers and represent the best data available to the Commission. While the data supplied in the questionnaires are checked against data previously supplied by the submitting firm and with data supplied by other domestic producers, data are not independently verified by direct Commission examination of the books of companies furnishing information. Data contained in this report should not be used for investment and other purposes without independent verification.

As specified in the reporting instructions sent to manufacturers, production and sales (unless otherwise specified) are defined as follows:

PRODUCTION is the total quantity of a commodity made available by ORIGINAL MANUFACTURERS ONLY within the customs territory of the United States (includes the 50 States, the District of Columbia, and Puerto Rico). It covere synthetic organic chemicals, specified crudes from petroleum and coal tar, and certain chemically described natural products, such as, alkaloids, enzymes, and perfume isolates. It is the sum-expressed in terms of 100% active ingredient unless otherwise specified in the reporting instructions—of the quantities:

Produced, separated, and consumed in the same plant or establishment. A commodity is considered separated either when it is isolated from the reactive system or when it is not isolated, but weighed, analymed, or otherwise measured, This includes byproducts and co-products that are not classifiable as waste materials;

INTRODUCTION

Produced and not isolated, but directly converted to a finished or semifinished item not included in this report (e.g., polyester film, polyurethane tires, nylon fiber, bar soap, etc.). (See specific instructions in individual sections);

Produced and transferred to other plants or establishments of the same firm or 100% owned subsidiaries or affiliates;

Produced and sold to, or bartered with, other firms (including less than 100% owned subsidiaries);

Produced for others under toll agreements (see general instructions);

Produced and held in stock.

PRODUCTION EXCLUDES:

Parification of a commodity, which is purchased by, or transferred from within, the company, unless inclusion of such processing is specifically requested in the reporting instructions for individual sections;
Intermediate products which are formed in the manufacturing process, but are not isolated from the reaction system—that is, not weighed, analysed, or otherwise measured; except such products as described above as being produced and not isolated, but directly converted to a finished or semifinished item.

Materials that are used in the process but which are recovered for re-use or sale;
Waste products having no economic significance.

SALES are actual quantities of commodities sold by ORIGINAL

MANUFACTURERS ONLY. Sales include the quantity and value of:

Shipments of a commodity for domestic use or for export, or segregation in a varehouse when title has passed to the purchaser in a bona fide sale;

Shipments of a commodity produced for you by others under toll agreement;

Shipments to subsidiary or affiliated companies, provided the ownership is less than 100%.

SALES EXCLUDES:
All intra-company transfers within a corporate entity;
All shipments to 100% owned subsidiary or affiliated
companies;
All resales of imported or purchased material, including
materials obtained by barter;
All shipments of commodity produced for others under
toll agreements.

VALUE OF SALES is the net dollar receipts of sales f.o.b.

plant or warehouse, or delivered. F.o.b. values are preferred, but if they are not readily available from your
records, delivered values are acceptable.

SUMMARY 3

Combined production of all synthetic organic chemicals, tar, and primary products from petroleum and natural gas in 1981 was 331,147 million pounds—a decrease of 2.5 percent from the output in 1980 (table 1). Sales of these materials in 1981, which totaled 176,272 million pounds, valued at \$63,637 million, were 2.7 percent smaller than in 1980 in terms of quantity and 5.3 percent larger in terms of value. These figures include data on production and sales of chemicals measured at several successive steps in the manufacturing process, and, therefore, they necessarily reflect some duplication.

In 1981, production of all synthetic organic chemicals, including cyclic intermediates and finished products totaled 217,340 million pounds, or 1.0 percent more than the output in 1980. Eight sections showed an increase in production in 1981 over 1980. Organic pigments (76 million pounds) increased by 10.1 percent; plastics and resin materials (40,601 million pounds) increased by 6.3 percent; plasticizers (1,866 million pounds) increased by 4.6 percent; surface-active agents (5,078 million pounds) increased by 4.6 percent; elastomers (4,849 million pounds) increased by 1.7 percent; miscellaneous cyclic and acyclic chemicals (95,039 million pounds) increased by 0.7 percent; cyclic intermediates (45,323 million pounds) increased by 0.6 percent; and medicinal chemicals (245 million pounds) increased by 0.4 percent. The remaining sections showed a decrease in production in 1981 from that in 1980. Dyes (230 million pounds) and miscellaneous end-use chemicals and chemical products (22,158 million pounds) led the decrease with a loss of 6.1 percent; flavor and perfume materials (165 million pounds) decreased 5.7 percent; rubber-processing chemicals (280 million pounds) decreased 3.8 percent; and pesticides and related products (1,430 million pounds) decreased 2.6 percent.

| | : | : | | : | : | : | 1 1 | | : |

Percentages calculated from figures rounded to thousands.

²Because of rounding, figures may not add to the totals shown.

Estimated by using data from the 1981 U.S. Industrial Outlook, p. 179.

^{*}Estimated by using the ratio of sales quantity as compared with production for elastomers in 1979.

*Value was computed by using the average price indexes for 1979 and 1980 which came from the Producers Prices and Prices Indexes for July 1980 and the Producers Prices and Prices Indexes for March 1981, pages 65 and 77, respectively.

GENERAL

In this report, synthetic organic chemicals are classified on the basis of their principal use as follows: cyclic intermediates, dyes, organic pigments, medicinal chemicals, flavor and perfume materials, plastics and resin materials, rubber-processing chemicals, elastomers (synthetic rubber), plasticizers, surface-active agents, pesticides and related products, miscellaneous end-use chemicals and chemical products, and miscellaneous cyclic and acyclic chemicals. Most of these groups are further subdivided either by use or by chemical composition. As intermediates, chemicals are used in the manufacture of finished products, aggregate figures that cover both intermediates and finished products necessarily include considerable duplication.

Total production of synthetic organic chemicals (intermediates and finished products combined) in 1981 was 217,339 million pounds or 3.3 percent more than the output of 210,356 million pounds reported for 1980, and 107.6 percent more than the output of 104,711 million pounds reported in 1967 (see table 2). Sales of synthetic organic chemicals in 1981 amounted to 114,299 million pounds, valued at \$52,713 million, compared with 110,510 million pounds, valued at \$47,518 million, in 1980 and 55,177 million pounds, valued at \$10,438 million, in 1967. Production of all cyclic products (intermediates and finished products combined) in 1981 totaled 70,334 million pounds or 5.2 percent more than the 66,834 million pounds reported for 1980 and 110.1 percent more than the 33,479 million pounds reported for 1967; however, the transfer of eight items, in 1979 from the primary products from petroleum and natural gas section to the section on cyclic intermediates has caused the output of cyclic products to appear much higher in relation to 1967 than would otherwise have resulted. Production of all acyclic products in 1981 totaled 147,006 million pounds, or 2.4 percent more than the 143,523 million pounds reported for 1980 and 106.4 percent more than the 71,232 million pounds reported for 1967.

The following tabulation shows, by chemical groups, the number of companies that reported production in 1981 of one or more of the chemicals included in the groups listed in table 2:

| Chemical group | Number of companies | Chemical group | Number of companies |
|------------------------------|---------------------------|---|---------------------------|
| Cyclic intermediates | 194 | Elastomers (synthetic rubber) | 26 |
| Dyes | 37 | Plasticizers | 52 |
| Organic pigments | 36 | Surface-active agents | 176 |
| Medicinal chemicals | 89 | Pesticides and related products | 85 |
| Flavor and perfume materials | 39 | Miscellaneous end-use chemicals and chemical products | 151 |
| Plastics and resin materials | 264 | | |
| Rubber-processing chemicals | 28 | Miscellaneous cyclic and acyclic chemicals | 282 |

¹Standard reference base period for Federal Government general-purpose index numbers.

²Includes ligninsulfonates.

³Items in these two sections were previously included in the section named miscellaneous chemicals.

STATISTICAL HIGHLIGHTS

Cynthia B. Foreso

TAR

Coal tar is produced chiefly by the steel industry as a byproduct of the manufacture of coke; water-gas tar and oil-gas tar are produced by the fuel-gas industry. Production of coal tar, therefore, depends on the demand for steel; production of water-gas tar and oil-gas tar reflects the consumption of manufactured gas for industrial and household use. Water-gas and oil-gas tars have properties intermediate between those of petroleum asphalts and coal tar. Petroleum asphalts are not usually considered to be raw materials for chemicals.

The quantity of coal tar produced in the United States in 1981 amounted to 472 million gallons (table 1). Production in 1981 was 12 percent less than the 534 million gallons of coal tar produced in 1980. Sales of coal tar in 1981 amounted to 362 million gallons, compared with 325 million gallons in 1980. U.S. production of water-gas and oil-gas tars was not reported to the Commission for 1980 or 1981; production of these tars in 1968 amounted to 21 million gallons, according to trade publications.

TAR CRUDES

Tar crudes are obtained from coke-oven gas and by distilling coal tar, water-gas tar, and oil-gas tar. The most important tar crudes are benzene, toluene, xylene, creosote oil, and pitch of tar. Some of these products are identical with those obtained from petroleum. Data for materials obtained from petroleum are included, for the most part, with the statistics for like materials obtained from coke-oven gas and tars, and are shown in tables 1 and 1B.

Domestic production of industrial and specification grades of benzene reported by coke-oven operators and petroleum refiners in 1981 amounted to 1,339 million gallons--16 percent less than the 1,585 million gallons reported for 1980. These statistics include data for benzene produced from light oil and petroleum. Sales of benzene by coke-oven operators and petroleum refiners in 1981 amounted to 688 million gallons, compared with 1,147 million gallons in 1980. In 1981, the output of toluene (including material produced for use in blending in aviation fuel) amounted to 856 million gallons--16 percent less than the 1,017 million gallons reported for 1980. Sales of toluene (Nitration grade 1°) in 1981 were 608 million gallons, compared with 677 million gallons in 1980. The output of xylene in 1981 (including that produced for blending in motor fuels) was 882 million gallons, compared with 909 million gallons in 1980. Sales of xylene decreased slightly to 381 million gallons in 1981, compared with 443 million gallons in 1980.

Production of crude naphthalene from coal-tar oils in 1981 amounted to 358 million pounds; however, sales figures could not be published without disclosing the operations of individual companies. Production of petroleum-derived naphthalene in 1981 amounted to 142 million pounds, compared with 103 million pounds in 1980. Production figures on road tar for 1981 cannot be published; in 1972 production amounted to 30 million gallons.

Some of the products obtained from tar and included in the statistics in table 1 are obtained from other products for which data are also included in the table. The statistics, therefore, involve considerable duplication, and for this reason no group totals or grand totals are given.

Data for 1981 tar crudes were supplied by 20 companies and company divisions.

TABLE 1. -- TAR AND TAR CRUDES: U.S. PRODUCTION AND SALES, 1981

[Listed below are all tar crudes for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists separately all products for which data on production and/or sales were reported and identifies the manufacturers of each]

*Data reported by tar distillers are not included because publication would disclose the operations of individual companies. At date of publication, sales values for coke-oven operators were not available.

*Includes data for material produced for use in blending motor fuels. The annual production statistics for petroleum refiners on benzene, toluene, and xylene are not comparable with the combined monthly production figures because of fiscal year revisions.

Benzene, specification grades (1°, 2°).

Note 1 .-- Statistics for materials produced in coke and gas-retort ovens are compiled by the Office of Energy Data and Interpretation, Energy Information Administration, Department of Energy. Statistics for materials produced in tar and petroleum refineries are compiled by the U.S. International Trade Commission.

Note 2 .-- Data for all other tars and tar crudes are not included in the 1981 report because publication would disclose the operation of individual companies. Preliminary coke-oven operators data were obtained from cumulative totals reported in Energy Data Reports, Coke Plant Report, quarterly, October-December, 1981, May 27, 1982.

¹Unit value per gallon, pound, or ton as specified. ²Includes only data for coal tar reported to the Office of Energy Data and Interpretation, Energy Information Administration, Department of Energy (Energy Data Reports, Coke Plant Report, quarterly, October-December, 1981, May 27, 1982). Data on U.S. production of water-gas tar and oil-gas tar are not collected by the U.S. International Trade Commission, but according to trade publications, production of these tars amounted to 21 million gallons in 1968.

Includes soft, medium, and hard pitch of tar, and pitch emulsion.

Standard reference base period for Federal Government general-purpose index numbers.

²Department of Energy data were not available at time of publication.

Reported to the U.S. International Trade Commission. Represents tar purchased from companies operating cokeovens and gas retort plants and distilled by companies operating tar-distillation plants. Statistics also include tar consumed other than by distillation by tar distillers.

² Includes only data for coal tar reported to the Office of Energy Data and Interpretation, Energy Information

Administration, Department of Energy.

**Data reported by tar distillers are not included because publication would disclose the operations of individual companies.

Includes data for material produced for use in blending motor fuels. Statistics are not comparable with mon-

thly figures which include some o-xylene.

Naphthalene solidifying at less than 79° C. Figures include production by tar distillers and coke-oven operators and represent combined data for the commercial grades of naphthalene. Because of conversion between grades, the figures may include some duplication. Statistics on naphthalene refined from domestic crudes are reported in the section on "Cyclic Intermediates."

Statistics cannot be published; to do so would disclose the operations of individual companies.

Includes data for creosote all produced by tar distillers and coke-oven operators and used only in wood preservatives.

TABLE 2.-- Tar crudes for which U.S. production or sales were reported, identified by manufacturers, 1981

[CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED WITH AN ASTERISK (*) CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3]

Note. -- Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

STATISTICAL HIGHLIGHTS

James Raftery

Primary products that are derived from petroleum and natural gas1 are related to the intermediates and finished products made from such primary materials in much the same way that crude products derived from the distillation of coal tar are related to their intermediates and finished products. Many of the primary products derived from petroleum are identical with those derived from coal tar (e.g., benzene, toluene, and xylene). Considerable duplication exists in the statistics on the production and sales of primary petroleum products because some of these primary chemicals are converted to other primary products derived from petroleum and because data on some production and sales are reported at successive stages in the conversion process. The statistics are sufficiently accurate, however, to indicate trends in the industry. Many of the primary products for which data are included in the statistics may be used either as fuel or as basic materials from which other chemicals are derived. In this report every effort has been made to exclude data on materials that are used as fuel; however, data are included on toluene and xylene which are used in blending aviation and motor fuel.

The output of primary products derived from petroleum and natural gas as a group amounted to 109,517 million pounds in 1981. Production in 1980 was 117,137 million pounds. The output of aromatic and naphthenic products from petroleum amounted to 26,261 million pounds in 1981, compared with 29,521 million pounds in 1980. Sales amounted to \$2,758 million in 1981 and \$3,724 million in 1980. In 1981, production of benzene was 9,573 million pounds; production of toluene was 6,140 million pounds; and production of xylene was 6,701 million pounds (table 1).

Production of all aliphatic hydrocarbons and derivatives from petroleum and natural gas was 83,257 million pounds in 1981, compared with 87,615 million pounds in 1980. Sales of these products were valued at \$7,611 million in 1981, compared with \$6,922 million in 1980. Production of ethylene was 29,418 million pounds in 1981. The output of 1,3-butadiene in 1981 was 2,986 million pounds. Production of propylene in 1981 was 13,482 million pounds (table 1).

Data for 1981 primary products from petroleum and natural gas for chemical conversion were supplied by 78 companies or company division.

¹Statistics on chemicals from coal tar are given in Section I (Tar and Tar Crudes) of this report.

TABLE 1.--PRIMARY PRODUCTS FROM PETROLEUM AND NATURAL GAS FOR CHEMICAL CONVERSION: U.S. PRODUCTION AND SALES, 1981

[Listed below are the primary products from petroleum and natural gas for chemical conversion for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists separately all primary products from petroleum and natural gas for chemical conversion for which data on production and/or sales were reported and identifies the manufacturers of each]

1 Calculated from rounded figures.

The chemical raw materials designated as aromatics are in some cases identical with those obtained from the distillation of coal tar; however, the statistics given in the table above relate only to such materials as are derived from petroleum and natural gas. Statistics on production and/or sales of benzene, toluene, and xylene from all sources are given in table 1 and 1B of the report on "Tar and Tar Crudes."

Includes toluene, solvent grade, 90 percent.

Includes toluene and xylene used as solvents; may include that which is blended in aviation and motor gasolines. Includes data for alkyl aromatics, crude cresylic acid, refined cresylic acid, polyethylbenzene, distillates,

solvents and miscellaneous cyclic hydrocarbons.

⁶Production figures on acetylene from calcium carbide for chemical synthesis are collected by the U.S. Bureau

of the Census.

hydrocarbons.

7 Includes data for refinery propylene.

"The statistics represent principally the butene content of crude refinery gases from which butadiene is manufactured.

⁹Includes data for butanes, mixed C, streams, 2-butene, and mixed butylenes.

¹⁰Includes data for isopentane, amylenes, dibutanized aromatic concentrate.

11 Includes sales data only for n-pentane.

12 Includes data for the following molecular weight ranges: C6-C7; C8-C16; C11-C15; C15-C20; and others.

13Includes data for the following chain lenghts: C6-C3; C6-C16; C9-C15; C16-C14; C10-C16; and others.

14Includes production and/or sales data for methane, methyl acetylene propadiene, methylcyclopentadiene, n-heptane, n-octane, di-isobutylene, eicosane, mixtures of C2 and C3, C6 and C7 hydrocarbons, hydrocarbon derivatives, and other

Note. -- Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix.

STATISTICAL HIGHLIGHTS

Edmund Cappuccilli

Cyclic intermediates are synthetic organic chemicals derived principally from petroleum and natural gas and from coal-tar crudes produced by destructive distillation (pyrolysis) of coal. Most cyclic intermediates are used in the manufacture of more advanced synthetic organic chemicals and finished products, such as dyes, medicinal chemicals, elastomers (synthetic rubber), pesticides, and plastics and resin materials. Some intermediates, however, are sold as end products without further processing. For example, refined naphthalene may be used as a raw material in the manufacture of 2-naphthol or of other more advanced intermediates, or may be packaged and sold as a moth repellant or as a deodorant. In 1981, about 42 percent of the total output of cyclic intermediates was sold; the rest was consumed chiefly in the producing plants in the manufacture of more advanced intermediates and finished products.

Total production of cyclic intermediates in 1981 amounted to 45,323 million pounds, an increase of less than one percent from the 45,070 million pounds produced in 1980. Sales of cyclic intermediates in 1981 were 19,202 million pounds, valued at \$7,437 million, compared with 20,060 million pounds, valued at \$7,248 million in 1980.

Intermediates which were produced in excess of 2 billion pounds in 1981 were ethylbenzene (7,813 million pounds), styrene (6,679 million pounds), dimethyl terephthalate (6,235 million pounds), p-xylene (4,532 million pounds), cumene (3,309 million pounds), and phenol (2,578 million pounds). Other large-volume intermediates produced in 1981 were cyclohexane (1,820 million pounds), isocyanates (1,203 million pounds), o-xylene (918 million pounds), nitro-benzene (902 million pounds), phthalic anhydride (870 million pounds), cyclohexanone (766 million pounds), aniline (634 million pounds), bisphenol A (555 million pounds), alkylbenzenes (535 million pounds), monochlorobenzene (285 million pounds), and toluene-2,4-diamine (205 million pounds). The chemicals noted above accounted for 88 percent of the total output of intermediates in 1981.

TABLE 1.--CYCLIC INTERMEDIATES: U.S. PRODUCTION AND SALES, 1981

[Listed below are all cyclic intermediates for which any reported data on production and sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all cyclic intermediates for which data on production and/or sales were reported and identifies the manufacturer of each]

| | | | 1 | | 1 | | 1 | | |

Calculated from unrounded figures.

Does not include data for coke oven and gas-retort ovens, reported to the Office of Energy Data and Inter-pretation, Energy Information Administration, Department of Energy.

*Figures include (o,m,p)-cresol from coal tar, m-cresol, p-cresol, and cresylic acid refined from petroleum and coal tar.

Data for 1981 are correct. Data for several previous years did not include all plants.

The figures for terephthalic acid, dimethyl ester (DMT) include both the acid itself and the dimethyl ester without double counting. The acid production figure was multiplied by the factor 1.16 to convert it to equivalent DMT.

Includes straight-chain dodecylbenzene, tridecylbenzene, and other straight-chain alkylbenzenes. Branchedchain alkylbenzenes are included in "All other cyclic intermediates." Data for 1980, included branch-chained alkylbenzenes.

[CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH AN ASTERISK (*) CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AN "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT]

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix. The above codes identify those of the 194 reporting companies and company divisions for which permission to publish was not restricted.

STATISTICAL HIGHLIGHTS

William Baker

Synthetic dyes are derived in whole or in part from cyclic intermediates. Approximately two-thirds of the dyes consumed in the United States are used by the textile industry to dye natural and synthetic fibers or fabrics; about one-sixth is used for coloring paper; and the rest is used chiefly in the production of organic pigments and in the dyeing of leather and plastics. Of the several thousand different synthetic dyes that are known, more than one thousand are manufactured by domestic producers, collectively. The large number of dyes results from the many different types of materials to which dyes are applied, the different conditions of service for which dyes are required, and the cost that a particular use can bear. Dyes are sold as pastes, powders, lumps, and solutions; concentrations vary from 6 percent to 100 percent. The concentration, form and purity of dye are determined largely by the use for which it is intended.

Total domestic production of dyes in 1981 amounted to 230 million pounds, or 6.4 percent less than the 245 million pounds produced in 1980 (table 1). Sales of dyes in 1981 amounted to 219 million pounds, valued at \$773 million, compared with 227 million pounds, valued at \$791 million, in 1980. In terms of quantity, sales of dyes in 1981 were 3.8 percent less than in 1980 and in terms of value, 2.3 percent less. The average unit value of sales of all dyes in 1981 was \$3.53 per pound compared with \$3.48 per pound im 1980.

The production of three classes of dyes increased in 1981, while the remaining six major classes registered slight to moderate declines in their production. Direct dyes increased by 15.3 percent from 31.2 million pounds in 1980 to 36.0 million pounds in 1981; food, drug, and cosmestic colors increased by 9.7 percent from 6.1 million pounds in 1980 to 6.7 million pounds in 1981; flourescent brightening agents increased by 1.2 percent from 37.9 million pounds in 1980 to 38.4 million in 1981.

TABLE 1.--Dyes: U.S. PRODUCTION AND SALES, 1981

[Listed below are all dyes for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all dyes for which data on production and/or sales were reported and identifies the manufacturers of each]

Footnotes

Caluculated from unrounded figures.

²The data include azoic compositions, azoic coupling components, azoic diazo components (bases and salts), fiber-reactive dyes, sulfur dyes, and miscellaneous dyes. Statistics for those groups of dyes may not be published separately because publication would disclose information received in confidence.

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix.

STATISTICAL HIGHLIGHTS

William Baker

Organic pigments are toners and lakes derived in whole or in part from benzenoid chemicals and colors.

Statistics on production and sales of all organic pigments in 1981 are given in table 1. For a few important pigments already reported in table 1, supplemental data on sales by commercial forms are reported in table 1A. Individual toners and lakes are identified in this report by the names used in the third edition of the Colour Index.

Total production of organic pigments in 1981 was 75.8 million pounds—9.3 percent more than the 69.4 million pounds produced in 1980. Total sales of organic pigments in 1981 amounted to 64.1 million pounds, valued at \$415.3 million compared with 60.8 million pounds, valued at \$361.3 million, in 1980. In terms of quantity, sales of organic pigments in 1981 were 5.4 percent higher than in 1980; in terms of value, sales in 1981 were 14.9 percent higher than in 1980.

Production of toners in 1981 amounted to 75.0 million pounds--9.4 percent more than the 68.5 million pounds reported in 1980. Sales in 1981 were 63.5 million pounds, valued at \$412.6 million, compared with 60.2 million pounds, valued at \$358.7 million, in 1980. Sales in 1981 were 5.5 percent higher than those of 1980 in terms of quantity, and 15.0 percent higher in terms of value. The individual toners listed in the report which were produced in the largest quantities in 1981 were Pigment Yellow 12, 11.6 million pounds; Pigment Blue 15:3, beta form, 8.5 million pounds; Pigment Red 49.1; barium toner, 5.8 million pounds; Pigment Red 57:1, calcium toner, 5.4 million pounds; Pigment Red 53:1, barium toner, 4.3 million pounds; and Pigment Yellow 14, 3.7 million pounds.

Production of lakes totaled 815,000 pounds in 1981--1.4 percent less than the 827,000 pounds reported for 1980. Sales of lakes in 1981 amounted to 552,000 pounds, valued at \$2.8 million. In terms of quantity, sales of lakes in 1981 were 5.5 percent less than in 1980; in term of value, sales in 1981 were 6.0 percent higher than in 1980.

For each of 14 selected pigments, or groups of pigments, table 1A gives data on sales by commercial forms. Pigment Yellow 14, Pigment Red 3, Pigment Red 48:2, calcium, Pigment Red 49:1, barium, Pigment Blue 15:1 and 15:2, alpha forms, and Pigment Green 7 were sold principally in the dry full-strength form. Pigment Yellow 12, Pigment Red 53:1, barium, Pigment Red 57:1, calcium and Pigment Blue 15:3, beta form were sold principally in the flushed form.

¹Toners and lakes are essentially the same in their final form; they differ in the method of preparation. A lake is an organic pigment produced by the interaction of a soluble dye, a precipitant, and an absorptive inorganic substrate. A toner is an insoluble dye produced as a powder; some toners are extended by the inclusion of a solid diluent.

²See also table 2 which lists these products and identifies the manufacturers by codes. These codes are listed in table 3.

TABLE 1.--ORGANIC PIGMENTS: U.S. PRODUCTION AND SALES, 1981

[Listed below are all organic pigments for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all organic pigments for which data on production and/or sales were reported and identifies the manufacturers of each]

The value of sales for toners is reported on a dry full-strenght basis and the value of sales for lakes is reported on a dry form basis. All sales value data exclude the additional costs of processing or packaging in commercial forms other than the dry full-strength or dry form.

Calculated from unrounded figures, except "All other."

Quantities for toners are reported as dry full-strength toner content, excluding the weight of any dispersing agent, vehicle, or extender. Quantities for lakes are reported as dry lake content, excluding the weight of any

dispersing agent or vehicle.

Note .-- The C.I. (Colour Index) numbers shown in this report are the identifying number given in the third edition of the Colour Index.

The abbreviation PMA and PTA stand for phosphomolybdic and phosphotungstic (including phosphotungstomolybdic) acids, respectively.

| | | 1 | | : | | | | | | | |

¹Sales quantities and values are identical in tables I and IA.

²Calculated from unrounded figures.

³Quantity of the various commercial forms is given in terms of dry full-strength toner content.

[&]quot;Includes presscake.

⁵Separate data on these commercial forms may not be published without revealing the operations of individual companies.

Note. -- The C.I. (Colour Index) numbers shown in this report are the identifying numbers given in the third edition of the Colour Index.

The abbreviations PMA and PTA stand for phosphomolybdic and phosphotungstic (including phosphotungstomolybdic) acids respectively.

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix. The above codes identify those of the 36 reporting companies and company divisions for which permission to publish was not restricted.

STATISTICAL HIGHLIGHTS

Tedford C. Briggs

Medicinal chemicals include the medicinal and feed grades of all organic chemicals having therapeutic value, whether obtained by chemical synthesis, by fermentation, by extraction from naturally occurring plant or animal substances, or by refining a technical grade product. They include antibiotics and other anti-infective agents, antihistamines, autonomic drugs, cardiovascular agents, central nervous system depressants and stimulants, hormones and synthetic substitutes, vitamins, and other therapeutic agents for human or veterinary use and for animal feed supplements.

The tables shows statistics for production and sales of medicinal chemicals grouped by pharmacological class. The statistics shown are for bulk chemicals only. Finished pharmaceutical preparations and products put up in pills, capsules, tablets, or other measured doses are excluded. The difference between production and sales reflects inventory changes, processing losses, and captive consumption of medicinal chemicals processed into ethical and proprietary pharmaceutical products by the primary manufacturer. In some instances, the difference may also include quantities for medicinal grade products used as intermediates, for example, penicillin G salts used as intermediates in the manufacture of semisynthetic pencillins. All quantities are given in terms of 100-percent content of the pure bulk drug.

Total U.S. production of bulk medicinal chemicals in 1981 amounted to 244.7 million pounds. Total sales of bulk medicinal chemicals in 1981 amounted to 153.4 million pounds, valued at \$1,198.7 million. Beginning in 1980, methionine and other amino acids and their salts are reported in the section on Miscellaneous End-Use Chemicals and Chemical Products. Section totals are not, therefore, comparable with those of previous years.

Production of the larger groups of medicinal chemicals in 1981 was as follows: Antibiotics, 30.6 million pounds, 24.3 percent more than in 1980; anti-infective agents other than antibiotics 31.8 million pounds, 9.5 percent more than in 1980; central nervous system depressants and stimulants, 58.2 million pounds, 3.0 percent less than in 1980; and vitamins, 43.1 million pounds, 1.3 percent more.

¹Complementary statistics on the dollar value of manufacturers' shipments of finished pharmaceutical preparations, except biologicals, are published annually by the U.S. Department of Commerce, Bureau of the Census, in Current Industrial Reports, Series MA-28G. Many pharmaceutical manufacturers that report to the Bureau of the Census are excluded from the U.S. International Trade Commission report because they are not primary producers of medicinal chemicals, that is, they do not themselves produce the bulk drugs which go into their pharmaceutical products, but purchase their drug requirements from domestic or foreign producers.

Production of some of the more important individual products listed in the table was as follows: Choline chloride, 58.9 million pounds, 7.2 percent less than in 1980; aspirin, 29.7 million pounds, 12.1 percent less; acetaminophen, 20.2 million pounds, 17.0 percent more; penicillins (except semisynthetic), 7.4 million pounds, 13.0 percent more; vitamin E, 10.2 million pounds, 40.4 percent more; and tetracyclines, 6.8 million pounds, 4.3 percent more.

TABLE 1.--MEDICINAL CHEMICALS: U.S. PRODUCTION AND SALES, 1981

[Listed below are all synthetic organic medicinal chemicals for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all medicinal chemicals for which data on production and/or sales were reported and identifies the manufacturer of each]

¹The data on production and sales are for bulk medicinal chemicals only. Methionine and other amino acids and their salts are now reported in the action on Miscellaneous End-Use Chemicals and Chemical Products. Section totals are not, therefore, comparable with years prior to 1980. $^{\times}\text{Calculated}$ from rounded figures.

Benzenoid, as used in this report, describes any cyclic medicinal chemical whose molecule contains either a 6-membered carbocyclic ring with conjugated double bonds or a 6-membered heterocyclic ring with 1 or 2 hetero atom and conjugated double bonds, except the pyrimidine ring.

Includes antibiotics of unknown structure.

Includes sales quantity and value of amoxicillin and ampicillin.

*Includes sales quantity and value of penicillin G, potassium.

7 Includes production and sales of antifungal and antituberculer antibiotics; and sales quantity and value of cephalosporins.

"Includes production of arsenic and bismuth compounds.

Does not include production of sulfaguanidine used as an intermediate in the production of anti-infective sulfonamides.

Uncludes sales quantity and value of sulfamethazine.

¹¹Includes sales quantity and value of urinary antiseptics.

12 Includes sales quantity and value of acetaminophen and aspirin.

13 Includes sales quantity and value of tranquilizers. Also includes production and sales of amphetamines, gen-

eral anesthetics, respiratory and cerebral stimulants, and skeletal muscle relaxants.

14 Methionine and its salts are now reported in the section on Miscellaneous End-Use Chemicals and Chemical Products under amino acids.

¹⁵Includes sales quantity and value of synthetic hypoglycemic agents.

16 Includes theophylline derivatives.

¹⁷Includes production and sales of vitamin A, vitamin B, vitamin C, vitamin D, and vitamin K.

18 Includes production and sales of antineoplastic agents, cardiovascular agents, diagnostic agents, and unclassified medicinal chemicals. Also, includes sales quantity and value of hematological agents and smooth muscle relaxants.

TABLE 2.--MEDICINAL CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE REPORTED, IDENTIFIED BY HANUFACTURER, 1981

[CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH AN ASTERISK (*) CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AN "X" SIGNIFIES THAT THE HANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT!

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix.

STATISTICAL HIGHLIGHTS

Eric Land

Flavor and perfume materials are organic chemicals used to impart flavors and aromas to foods, beverages, cosmetics, and soaps. These aroma chemicals are also utilized to neutralize or mask unpleasant odors in industrial processes and products as well as in consumer products.

Total domestic production of flavor and perfume materials in 1981 amounted to 164.6 million pounds. Sales of these materials in 1981 amounted to 118.6 million pounds, valued at \$251.6 million, compared with 129.0 million pounds, valued at \$253.5 million, in 1980. These totals do not include benzyl alcohol, which, before 1973, was included in flavor and perfume materials but is now shown in the miscellaneous cyclic section of this series. U.S. production of flavor and perfume materials in 1981 declined by 5.8 percent from the level in 1980 while the quantity of sales decreased by 8.1 percent.

Production of cyclic flavor and perfume materials in 1981 amounted to 93.1 million pounds; sales amounted to 68.7 million pounds, valued at \$157.7 million. Individual publishable chemicals in the cyclic group produced in the greatest volume in 1981 were α -terpineol, anethole, and benzyl acetate.

U.S. output of acyclic flavor and perfume materials in 1981 amounted to 71.4 million pounds; sales of these materials amounted to 49.9 million pounds, valued at \$93.9 million. Monosodium glutamate was by far the most important of the acyclic chemicals in 1981, although the data are not publishable. Other important acyclic compounds included linally alcohol, citronellol, and linally acetate.

TABLE 1 .-- FLAVOR AND PERFUME MATERIALS: U.S. PRODUCTION AND SALES, 1981

[Listed below are all synthetic organic flavor and perfume materials for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists separately all flavor and perfume materials for which data on production and/or sales were reported and identifies the manufacturers of each]

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix. The above codes identify those of the 34 reporting companies and company divisions for which permission to publish was not restricted.

Edward J. Taylor

Plastics and resin materials are high molecular weight polymers which, at some stage in their manufacture, exist in such physical condition that they can be shaped or otherwise processed by the application of heat and pressure. The terms "plastics," "resin," and "polymers," can be (and often are) used interchangeably by the trade. Depending on the chemical composition, manufacturing process or intended use, the commercial products may contain plasticizers, fillers, extenders, stabilizers, coloring agents, or other additives. There are about 40 to 50 basic plastics and resins which are available commercially. These basic materials are available in literally thousands of individual compounds each with its distinct properties depending on the molecular weight of the resin and the types and amounts of the additives present. Plastics materials may be molded, cast, or extruded into semifinished or finished solid forms. Resin materials may be in the form of solutions, pastes, or emulsions for applications such as protective coatings, adhesives, or paper and textile treatment.

Statistics on U.S. production and sales of synthetic plastics and resin materials for 1981 are given in table 1. U.S. production of plastics and resin materials in 1981 totaled 40,601 million pounds, or 6.3 percent more than the 38,186 million pounds produced in 1980. Sales in 1981 totaled 36,107 million pounds, valued at \$17,092 million, compared with 33,550 million pounds, valued at \$16,011 million, in 1980.

Thermosetting materials are those which harden with a change in composition in the final treatment so that in their final state as finished articles they are substantially infusible and insoluble, that is, they cannot again be softened by heat or solvents. U.S. production of thermosetting materials totaled 7,295 million pounds in 1981, compared with 7,064 million pounds in 1980. Production of the most important products in 1981 included phenolic resins (1,688 million pounds), amino (or urea and melamine) resins (1,495 million pounds), polyester resins, unsaturated (1,132 million pounds), and alkyd resins (717 million pounds).

Thermoplastic materials are those which in their final state as finished articles can be repeatedly softened by heat and hardened by a decrease in temperature. U.S. production of thermoplastic materials totaled 33,306 million pounds in 1981 (or 82.0 percent of the total output for 1981), compared with 31,122 million pounds in 1980. Production of the most important products in 1981 included polyethylene (12,604 million pounds), vinyl resins (6,962 million pounds), and styrene type materials (5,915 million pounds).

TABLE 1.--PLASTICS AND RESIN MATERIALS: U.S. PRODUCTION AND SALES, 1981

[Quantities and values are given in terms of the total weight of the materials (dry basis). Listed below are all plastics and resin materials, urethane type elastomers, and certain precursors for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all products for which data on production and/or sales were reported and identifies the manufacturers of each]

¹Calculated from unrounded figures.

²Dry weight basis unless otherwise specified. Dry weight basis is the total weight of the materials including resin and coloring agents, extenders, fillers, plasticizers, and other additives, but excluding water and other liquid diluents unless they are an integral part of the materials.

Includes benzenoid plastics and resin materials as defined in part 1 of schedule 4 of the Tariff Schedules of the United States (TSUS); also includes urethane type elastomers which are not defined in part 1 of schedule 4 of the TSUS.

^{*}Includes reactive diluents which are an integral part of the resin. Excludes the weight of hardeners sold in association with the resin as part of a two-component system.

Data shown for advanced epoxy resins are that part of the unmodified epoxy resins which is further processed; therefore, the totals in parentheses are not included in the grand total.

[&]quot;Polyester resins are unsaturated alkyd resins, later to be copolymerized with a monomer (such as styrene or methyl methacrylate), and polyallyl resins (such as diallyl phthalate and diglycol carbonate). Data are on an "as sold" basis, including monomer if part of the resin system.

⁷In addition to the polyols, the other principal starting materials used in the production of urethane products are the isocyanic acid derivatives, mainly the 80/20 mixture of toluene-2,4- and 2,6-disocyanate. Statistics for the isocyanic acid derivatives are reported in the "Cyclic Intermediates" section of the Synthetic Organic Chemicals report.

⁸The data on urethane elastomers are believed to be not fully representative of the total urethane market in view of the very large number of urethane elastomer producers.

⁹Includes acetone-formaldehyde resins, alkyl resins, polybutadiene resins, thiourea resins, and certain other thermosetting resins.

¹⁰Does not include production or sales for fiber use.

¹¹Engineering plastics: Includes acetal, polycarbonate, polyimide and amide-imide polymers, polyphenylene oxide, polyphenylene sulfide and polysulfone. Engineering plastics are define in Whittington's Dictionary of Plastics, as "All plastics, with or without fillers or reinforcements, which have mechanical, chemical and thermal properties suitable for use in construction, machine components and chemical processing equipment." The above list of plastics (all of which are thermoplastic) was selected from a larger group in this source. Certain other plastics named in Whittington's Dictionary as engineering plastics, such as ABS resins, acrylic resins, and nylon resins, are not included in the above list as they are published separately.

Footnotes -- Continued

12Statistics for nylon 6 and nylon 6/6 which are used in plastic applications (e.g., molding, etc.) are included here.

13Statistics are included here for polyethylene terephthalate used in plastics applications (e.g., molding, etc.). Statistics also are included here for production only when the starting materials are converted directly to a finished product (i.e., "in-situ" production), polyester film and tape are examples of such a conversion.

14Includes expandable polystyrene beads (EPS).

¹⁵Includes data for styrene-acrylonitrile copolymer (SAN) resins, α-methyl styrene polymers, methyl meth-acrylate-butadiene-styrene (MBS) resins, styrene-divinylbenzene copolymer resins, styrene-maleic anhydride copolymer resins, and styrene-methyl methacrylate copolymer resins.

16 Data are on the basis of dry resin content, excluding the weight of plasticizers, extenders, fillers, col-

oring agents, stabilizers, or impact modifiers, unless otherwise noted.

¹⁷Data for polyvinyl acetate produced and sold in latex form includes the weight of any protective colloids which are used as emulsion stabilizers and form an integral part of the resin system. Production and sales do not include polyvinyl acetate used as a reactive intermediate for polyvinyl alcohol or other vinyl resins.
¹⁸Production and sales do not include polyvinyl alcohol used as a reactive intermediate for polyvinyl buty-

ral or other vinyl resins.

19 Includes polyvinyl alcohol production.

28 Includes cellulose plastics, coumarone-indene resins, polybutylene type resins, polyethylene terephthalate (PET) resins (sales only), polyphenyl aromatic ester resins, and other thermoplastic materials.

Note. -- Data reported to the U.S. International Trade Commission do not necessarily coincide with that reported to the Society of the Plastics Industry (SPI) because of differences in both the reporting instructions and in the coverage of certain resins.

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix. The above codes identify those of the 264 reporting companies and company divisions for which permission to publish was not restricted.

Sharon Kay Thompson

Rubber-processing chemicals are organic compounds that are added to natural and synthetic rubber to give them qualities necessary for their conversion into finished rubber goods. In this report, statistics are given for cyclic and acyclic compounds by use--such as accelerators, antioxidants, blowing agents, and peptizers. Data on production and sales of rubber-processing chemicals in 1981 are given table 1.1

Production of rubber-processing chemicals as a group in 1981 amounted to 280 million pounds, or 4.0 percent less than the 291 million pounds in 1980. Sales of rubber-processing chemicals in 1981 amounted to 182 million pounds, valued at \$298 million, compared with 194 million pounds, valued at \$296 million in 1980.

The production of cyclic rubber-processing chemicals in 1981 amounted to 246 million pounds, or 4.7 percent less than the 258 million pounds in 1980. Sales in 1981 were 158 million pounds, valued at \$271 million, compared with 168 million pounds, valued at \$270 million of cyclic rubber-processing chemicals in 1981, accelerators, activators, and vulcanizing agents accounted for 33.6 percent and antioxidants, antiozonants, and stabilizers for 60.6 percent. Production of antioxidants, antiozonants, and stabilizers, which amounted to 149 million pounds in 1981, included 91 million pounds of amino compounds and 58 million pounds of phenolic and phosphite compounds. Sales of amino antioxidants, antiozonants, and stabilizers in 1981 amounted to 61 million pounds, valued at \$105 million; sales of phenolic and phosphite antioxidants, antiozonants, and stabilizers, were 35 million pounds, valued at \$55 million.

Production of acyclic rubber processing chemicals in 1981 amounted to 33 million pounds, or approximately the same amount as reported for 1980. Sales in 1981 totaled 24 million pounds, valued at \$27 million, compared with 26 million pounds, valued at \$26 million, in 1980, Dithiocarbamic acid derivatives accounted for 28.1 percent of sales (based on quantity) of acyclic rubber-processing chemicals in 1981.

¹See also table 2 which lists these producers and identifies the manufacturers by codes. These codes are given in table 3.

TABLE 1.--RUBBER-PROCESSING CHEMICALS: U.S. PRODUCTION AND SALES, 1981

[Listed below are all rubber-processing chemicals for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists separately all rubber-processing chemicals for which data on production and/or sales were reported and identifies the manufacturers of each]

¹ Calculated from unrounded figures.

²Includes guanidines, dithiocarbamates, and other uses not separately shown.

Includes blowing agents, peptizers, and other uses not separately shown.

³Data on dithiocarbamates included in this table are for materials used chiefly in the processing of natural and synthetic rubber. Data on dithiocarbamates which are used chiefly as fungicides are included in the report on "Pesticides and Related Products."

[&]quot;Includes aldehyde- and acetone-amine reactions products.

[&]quot;Includes "other" conditioning and lubricating agents, polymerization regulators, shortstops, and other uses not separately shown.

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix. The above codes identify those of the 28 reporting companies and company divisions for which permission to publish was not restricted.

Sharon Kay Thompson

Elastomers (synthetic rubber) are high polymeric materials with properties similar to those of natural rubber. The term "elastomers" as used in this report, means a substance, whether in bale, crumb, powder, latex, and other crude form, which can be vulcanized or similarly processed into a material that can be stretched to at least twice its original length and, after having been so stretched and the stress removed, will return with force to approximately its original length. U.S. production and sales of elastomers in 1981 are shown in table 1.1

Total U.S. production² of synthetic rubber in 1981 amounted to 4,849 million pounds, an increase of 1.7 percent from that produced in 1980.³ Total sales² of elastomers in 1981 amounted to 3,256 million pounds, approximately the same as that sold in 1980.³

Styrene-butadiene rubber (SBR, or S-type rubber) in 1981 continued to be the elastomer produced in the greatest quantity as it has been for more than a quarter of a century. U.S. production of S-type rubber, including 21 million pounds of its vinylpyridine sub-type, amounted to 2,268 million pounds in 1981. Solution polymerized butadiene rubber, a stereo type elastomer, was produced domestically in 1981 in the next largest amount--767 million pounds. Other principal types of synthetic elastomers for which U.S. production data are reported separately are ethylene-propylene rubber, production of which was 401 million pounds in 1981; acrylonitrile-butadiene (N-type) rubber, production of which was 127 million pounds; and silicone type elastomers, production of which was 106 million pounds.

Sales of S-type rubber by U.S. producers in 1981 (excluding its vinyl-pyridine sub-type) amounted to 1,326 million pounds. Sales of solution polymerized butadiene rubber amounted to 418 million pounds, and those of ethylene-propylene rubber to 292 million pounds. Sales of N-type rubber in 1981 amounted to 105 million pounds.

¹See also table 2 which lists these products and indicates the manufacturers of each by code. The codes are identified by company name in table 3.

²Does not include urethane type elastomers.

³ Calculated by using the estimated figures for production and sales in 1980.

Data for 1980 are not available.

TABLE 1 .-- ELASTOMERS (SYNTHETIC RUBBER): U.S. PRODUCTION AND SALES, 1981

[Listed below are all elastomers (synthetic rubber) for which reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all elastomers for which data on production and/or sales were reported and identifies the manufacturers of each]

¹The term "elastomers" is defined as substance in bale, crumb, powder, latex, and other crude forms which can be vulcanized or similarly processed into materials that can be stretched at 68° F. to at least twice their original length and, after having been stretched and the stress removed, will return with force to approximately their original length.

Includes oil content of oil-extended elastomers.

Calculated from unrounded figures.
"Included in "All other elastomers."

⁵Includes production and/or sales data for acrylic ester, butyl, chloroprene, epichlorohydrin, fluorinsted, isobutylene, isoprenes, polysulfide, and silicone-type elastomers, certain solution elastomers, chlorinsted rubber, chlorosulfonated polyethylene, thermoplastic rubber, and miscellaneous elastomers.

Note .-- Data on production and sales of urethane elastomers are now reported in the section "Plastics and Resin Materials" with urethane plastics and polyols.

J. Lawrence Johnson

Plasticizers are organic chemicals that are added to synthetic plastics and resin materials to (1) improve workability during fabrication, (2) extend or modify the natural properties of these materials, or (3) develop new improved properties not present in the original material. Table 1 presents statistics on U.S. production and sales of plasticizers in as great a detail as is possible without revealing the operations of individual producers.

U.S. production of plasticizers totaled 1,866 million pounds in 1981, an increase of 4.5 percent from the 1,784 million pounds reported for 1980. Sales of plasticizers totaled 1,567 million pounds, valued at \$894 million, in 1981, compared with 1,574 million pounds, valued at \$858 million, in 1980.

Production of cyclic plasticizers in 1981, which consisted chiefly of the esters of phthalic anhydride, phosphoric acid, and trimellitic acid, amounted to 1,458 million pounds, an increase of 5.0 percent from the 1,389 million pounds reported for 1980. Sales of cyclic plasticizers in 1981 totaled 1,209 million pounds, valued at \$622 million, compared with 1,220 million pounds, valued at \$608 million, in 1980. The most important cyclic plasticizers were the dioctyl phthalates, with production of 304 million pounds, in 1981.

Production of acyclic plasticizers in 1981 totaled 407 million pounds, an increase of 3.0 percent from the 396 million pounds reported for 1980. Sales of acyclic plasticizers totaled 358 million pounds, valued at \$271 million, in 1981, compared with 354 million pounds, valued at \$250 million, in 1980. Epoxidized soya oils were the most important acyclic plasticizer in 1981 with production of 83 million pounds.

TABLE 1.--PLASTICIZERS:1 U.S. PRODUCTION AND SALES, 1981

[Listed below are plasticizers for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists separately all plasticizer chemicals for which data on production and/or sales were reported and identifies the manufacturers of each]

Includes data for compounds used principally (but not exclusively) as primary plasticizers. Does not include clearly defined extenders or secondary plasticizers.

²Calculated from unrounded figures.

Includes benzenoid products as defined in part 1, schedule 4, of the Tariff Schedules of the United States

"Includes data for cresyl diphenyl phosphate, dibutyl phenyl phosphate, diphenyl octyl phosphate, tricresyl phosphate, triphenyl phosphate, and other cyclic phosphoric acid esters.

The difference between the production reported here and that shown on the Preliminary Report on U.S. Production of Selected Organic Chemicals (including Synthetic Plastics and Resin Materials), 1981, results from a combination of incorrect reporting by some companies, end-of-year inventory adjustments, and rounding.

⁶Includes data for glycol dibenzoates, toluenesulfonamides, tetrahydrofurfuryl oleate, and other cyclic plas-

ticizers.

7 Includes data for azelaic acid esters, citric and acetylcitric acid esters, myristic acid esters except isopropyl myristate, pelargonic acid esters, ricinoleic and acetylricinoleic acid esters, glyceryl and glycol esters, phosphoric acid esters, sebacic acid esters and other acyclic plasticizers.

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix. The above codes identify those of the 52 reporting companies and company divisions for which permission to publish was not restricted.

STATISTICAL HIGHLIGHTS

Eric Land

The surface-active agents included in this report are organic chemicals that reduce the surface tension of water or other solvents and are used chiefly as detergents, dispersing agents, emulsifiers, foaming agents, or wetting agents in either aqueous or nonaqueous systems. Waxes and products used chiefly as plasticizers are excluded. Surface-active agents are produced from natural fats and oils, from silvichemicals such as lignin, rosin, and tall oil, and from chemical intermediates derived from coal tar and petroleum. A major part of the output of the bulk chemicals shown in this report is consumed in the form of packaged soaps and detergents for household and industrial use. The remainder is used in the processing of textiles and leather, in ore flotation and oil-drilling operations, and in the manufacture of agricultural sprays, cosmetics, elastomers, foods, lubricants, paint, pharmaceuticals, and many other products.

The statistics for production and sales of surface-active agents are grouped by ionic class and by chemical class and subclass. All quantities are reported in terms of 100-percent organic surface-active ingredient and thus exclude all inorganic salts, water, and other diluents. Sales statistics reflect sales of bulk surface-active agents only; sales of formulated products are excluded.

Total U.S. production of surface-active agents in 1981 amounted to 5,078 million pounds, or 4.6 percent greater than the 4,853 million pounds reported for 1980. Sales of bulk surface-active agents in 1981 amounted to 3,104 million pounds, valued at \$1,477 million, compared with sales in 1980 of 2,928 million pounds, valued at \$1,296 million. In terms of quantity, sales in 1981 were 6.0 percent greater than in 1980.

Production of anionic surface-active agents in 1981 amounted to 3,353 million pounds, or 66.0 percent of the total surfactant output reported for 1981. Sales of anionics in 1981 amounted to 1,655 million pounds, valued at \$541 million.

Production of cationic surface-active agents in 1981 amounted to 337 million pounds, 8.5 percent more than the 311 million pounds reported in 1980. Production of nonionic surface-active agents amounted to 1,369 million pounds in 1981, 3.7 percent more than the 1,320 million pounds reported in 1980. Sales of cationic surface-active agents in 1981 increased by 7.8 percent in terms of quantity and increased by 14.3 percent in terms of value when compared with sales in 1980. Sales of nonionics in 1981 increased by 10.0 percent in terms of quantity and increased by 14.3 percent in terms of value when compared with sales in 1980.

The difference between production and sales reflects inventory changes and captive consumption of surface-active agents by synthetic rubber producers, and by manufacturers of cosmetics, packaged detergents, bar soaps, and other formulated consumer products. In some instances the difference may also reflect quantities of surface-active agents used as chemical intermediates, e.g., nonionic alcohol and alkylphenol ethoxylates which may be converted to anionic surface-active agents by phosphation or sulfation.

TABLE 1.--Surface-active agents: U.S. production and sales, 1981

[Listed below are all surface-active agents for which reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all surface-active agents for which data on production and/or sales were reported and identifies the manufacturers of each]

| ther nonionic surface-active agents: | 38,527: | 11,001: | 8,785: | .80 |
| | t | 1 | | |

All quantities are given in terms of 100-percent organic surface-active ingredient.

2 Sales include products sold as bulk surface-active agents only.

3 Calculated from unrounded figures.

4 The term "benzenoid" used in this report, describes any surface-active agents, except lignin derivatives, whose molecular structure includes 1 or more 6-membered carbocyclic or heterocyclic rings with conjugated double bonds (e.g., the benzene ring or the pyridine ring).

5 Includes aligninulfonates.

6 Torludes all other natural fats and oils sulfated.

^{*}Includes all other natural fats and oils, sulfated.

⁷Includes quaternary ammonium salts, containing oxygen.

TABLE 2.--SURFACE-ACTIVE AGENTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE REPORTED, IDENTIFIED BY MANUFACTURER, 1981

[CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH AN ASTERISK (*) CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AN "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT]

   N-Lauroylsarcosine, sodium salt- - - - - - - : HMP, ONX.
   N-Oleoylpolypeptide, sodium salt - - - - - - : LMI.
   N-Oleoylsarcosine- - - - - - - - - - - - : HMP.
   N-Oleoylsarcosine, sodium salt - - - - - - - : GAF.
   Tridecyloxypoly(ethyleneoxy)acetic acid, sodium :
     salt - - - - - : BRD, STC.
   Carboxylic acids with amide, ester or ether :
     linkage, other - - - - - - - - - - - : CHP, HMP, S, STC, STP.
 POTASSIUM AND SODIUM SALTS OF FATTY, ROSIN, AND
     TALL OIL ACIDS:
   Castor oil acids, potassium salt - - - - - - : NTL, SEA.
   Castor oil acids, sodium salt- - - - - - - - : HEW.
  *Coconut oil acids, potassium salt----: AES, CON, CYL, DYS, ESS, HEW, HIP, HMT, LUR, NMC, PEK, PG, PMX, SOP, X.
  *Coconut oil acids, sodium salt - - - - - - - : AGP, BSW, CON, CP, HEW, JRG, LEV, NMC, NPR, PG, SOP.
   Corn oil acids, potassium salt - - - - - - - : HNT, NMC.
   Fish oil acids, sodium salt- - - - - - - - : PG.
   Mixed vegetable fatty acids, potassium salt- - - : AES, DYS, GRL, QCP.
  *Oleic acid, potassium salt - - - - - - - - : AES, DA, HAL, HNT, USR, WBG, X. Oleic acid, sodium salt - - - - - - - - - : BSW, USR, WBG, WTC.
   Olive oil acids, sodium salt - - - - - - - - : HNT.
   Palm oil acids, sodium salt- - - - - - - - - : BSW, HEW.
   Rosin acids, potassium salt- - - - - - - - - : HPC, PEK.

AMINES, NOT CONTAINING OXYGEN (AND SALTS THEREOF) -- CONTINUED
 DIAMINES AND FOLYAMINES -- CONTINUED
   N-(Mixed alkyl)polyethylenepolyamine - - - - - : CCW.
   N-(9-Octadecenyl)trimethylenediamine - - - - - : ARC, JTO, SCP, SHX.
   N-(Soybean oil alkyl)trinethylenediamine - - - - : ENO.
   N-(Tallow - alkyl)dipropylenetriamine- - - - - : ARC, JOR, JTO.
   N-(Tallow alkyl) trimethylenediamine- - - - - - - ARC, JTO, NCW, SHX.
   Diamines and polyamines, all other - - - - - - : ARC, ENO, ICI, JOR, NCW, STC, X, X.
 PRIMARY MONOAMINES:
   (Coconut oil alkyl)amine - - - - - - - - - : ARC, ENO, JTO, SHX.
   (Docosyl and eicosyl)amine - - - - - - - - : ENO.
   Dodecylamine - - - - - - - - - - - - - : ARC, SHX.
   Hexadecylamine - - - - - - - - - - - - - : ARC. ENO.
   (Hydrogenated tallow alkyl)amine - - - - - - - : ARC, ENO, JTO, SHX.
  #9-Octadecenylamine - - - - - - - - - - : ARC. ENG. JTO, SHX.
  *Octadecylamine - - - - - - - - - - - - : ARC, ENO, SHX.
   (Soybean oil alkyl)amine - - - - - - - - - : ARC. ENO. JTO.
   (Tall oil alkyl)amine- - - - - - - - - - - : NCW. SHX.
  *(Tallow alkyl)amine- - - - - - - - - - - : ARC. ENO. JTO. SHX.
   Primary monoamines, all other - - - - - - - : ARC, ENO.
 SECONDARY AND TERTIARY MONOAMINES:
   Bis(coconut oil alkyl)amine- - - - - - - - - : ARC.
   Bis(hydrogenated tallow alkyl)amine- - - - - - : ARC, SHX.
  *N.N-Dimethyl(coconut oil alkyl)amine - - - - - : AAC, ARC, BRD, ENO.
   N.N-Dimethyldodecylamine - - - - - - - - - : ARC, BRD.
  *N.N-Dimethylhexadecylamine - - - - - - - - : ARC, BRD, SHX.
   N.N-Dimethyl(hydrogenated tallow alkyl)amine - - - : ARC.
   N.M-Dimethyl(mixed alkyl)amine - - - - - - - : ONX, TNA.
   N.N-Dimethyl-9-octadecenylamine- - - - - - - : ENO.
   *N.N-Dimethyloctadecylamine - - - - - - - - : ARC. BRD. ENO. SHX.
   N.N-Dimethyl(soybean oil alkyl)amine - - - - - : ARC, ENO.
   N.N-Dimethyltetradecylamine- - - - - - - - : ARC.
   N-Methylbis(coconut oil alkyl)amine- - - - - - : ARC, SHX.
   N-Methylbis(hydrogenated tallow alkyl)amine- - - : ARC, ENO, SHX.
   Triisodecylamine - - - - - - - - - - - - - : SCP.
   Trilaurylamine - - - - - - - - - - - - - : SCP.
   Trioctylamine- - - - - - - - - - - - - - : SCP.
   Secondary and tertiary monoamines, all other - - - : ARC, AZS, BRD, ENO, JTO, PEL.
OXYGEN-CONTAINING QUATERNARY AMMONIUM SALTS:
  Benzyl(coconut oil alkyl)bis(2-hydroxyethyl)-
   ammonium chloride- - - - - - - - - - - - - : X.
 Benzyl(coconut oil alkyl,ethoxylated)-
```

dinethylanmonium chloride- - - - - - - - - : DUP, SCP.

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix. The above codes identify those of the 176 reporting companies and company divisions for which permission to publish was not restricted.

STATISTICAL HIGHLIGHTS

Edmund Cappuccilli

Pesticides and related products include fungicides, herbicides, insecticides, rodenticides, and related products such as plant growth regulators, seed disinfectants, soil conditioners, soil fumigants, and synergists. The data are given in terms of 100 percent active materials; they exclude such materials as diluents, emulsifiers, and wetting agents.

U.S. production of pesticides and related products in 1981 amounted to 1,430 million pounds--2.6 percent less than the 1,468 million pounds reported for 1980 (table 1). Sales in 1981 were 1,291 million pounds, a decline of 8.2 percent, as compared with 1,406 million pounds reported in 1980; the value of sales was \$4,652 million in 1981, compared with \$4,078 million in 1980--an increase of 14.1 percent.

The output of cyclic pesticides and related products amounted to 1,012 million pounds in 1981--4.0 percent less than the 1,054 million pounds produced in 1980. Sales in 1981 were 907 million pounds, valued at \$3,504 million, compared with 1,017 million pounds, valued at \$3,080 million in 1980. Production of acyclic pesticides and related products in 1981 amounted to 418 million pounds, compared with 414 million pounds reported for 1980. Sales in 1981 were 383 million pounds compared with 389 million pounds reported in 1980; the value of sales were 1,148 million in 1981, compared with \$999 million in 1980--an increase of 15.0 percent.

¹See also table 2 which lists these products and identifies the manufacturers by codes. These codes are given in table 3.

TABLE 1.--PESTICIDES AND RELATED PRODUCTS: U.S. PRODUCTION AND SALES, 1981

[Listed below are all pesticides and related products for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all pesticides and related products for which data on production and/or sales were reported and identifies the manufacturers of each]

| | | | | |

¹ Calculated from unrounded figures.

²Includes benomyl, captafol, captan, chlorothalonil, dinocap, DMTT, folpet, PCNB, PCP, PMA, sodium pentachlorophenate, and others.

³Includes alachlor, atrazine, benefin, bensulide, other 2,4-D esters and salts, 2,4-DB, dicamba, dinitrophenol compounds, diuron, isopropyl phenylcarbamates (IPC and CIPC), MCPA, molinate, NPA, picloram, propanil, triazines, trifluralin, uracils, plant growth regulators, and others.

[&]quot;Includes carbophenothion, diazinon, dioxathion, methyl parathion, and other phosphorothioates and phosphorodithioates.

⁵Includes carbaryl, carbofuran, chlorinated insecticides (chlordan, chlorobenzilate, DDT, heptachlor, toxaphene, and others), insect attractants, DEET and other insect repellents, small amounts of rodenticides, and others.

⁶Includes maneb, nabam, and zineb, plus the remaining dithiocarbamates which are used chiefly as fungicides.

⁷Includes butylate, dalapon, EPTC, methanearsonic acid salts, thiocarbamates, and organophosphorus herbicides, and others.

Footnotes -- Continued

⁶Includes acephate, DDVP, disulfoton, ethion, malathion, phorate, and other organophosphorus insect-

icides. 9 Includes methomyl, methyl bromide, soil conditioners and fumigants, aldicarb, small quantities of rodenticides, and others.

Note.--Does not include data for the insect fumigant, p-dichlorobenzene nor the fungicide, o-phenylphenol. These data are included in the section on "Cyclic Intermediates." It also does not include data for the fungicides, dimethyldithiocarbamic acid, sodium salt and dimethyldithiocarbamic acid, zinc salt (i.e., ziram). These data are included in the section on "Rubber-Processing Chemicals." The data for ethylene dibromide, a fumigant, are included in the "Miscellaneous End-Use Chemicals and Chemical Products" section.

TABLE 2 .-- PESTICIDES AND RELATED PRODUCTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE REPORTED, IDENTIFIED BY MANUFACTURER, 1981

[CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH AN ASTERISK (*) CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AN "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT]

SECTION XIV -- MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS

STATISTICAL HIGHLIGHTS

David G. Michels

This section incorporates those end-use groups which are not readily classifiable within the prior sections of this report. Both cyclic and acyclic chemicals fall within this section. With the exception of methionine and its salts, photographic chemicals, water soluble polymers, and tanning materials, both production and sales of all other end-use groups contained within this section decreased from 1980 levels.

In 1981, the production of miscellaneous end-use chemicals exceeded 22.1 billion pounds, a decrease of 6.1 percent from the more than 23.6 billion pounds of production reported for 1980. Sales in 1981 totaled 12.9 billion pounds, valued at \$3.9 billion. The sales quantity decreased 8.0 percent from that of 1980 with the value of sales increasing by 14 percent. Polymers for fibers and urea collectively accounted for 83 percent of the 1981 production of these miscellaneous end-use chemicals. Urea accounted for 73 percent of the 1981 sales quantity of these chemicals.

In 1981, the production of lubricating oil and grease additives totaled 1.5 billion pounds, a decrease of 10 percent, compared with 1980. Total sales quantity for 1981 was 1.1 billion pounds, 7 percent less than the 1980 sales quantity of 1.2 billion pounds, while the value of sales increased 2.4 percent to \$895 million.

Production of fuel additives for 1981 totaled 1.4 billion pounds, a decrease of 5.2 percent from the previous year. Total sales quantity for 1981 was 1.1 billion pounds, down 14 percent from the 1980 sales quantity of 1.3 billion pounds, with the sales value decreasing 4 percent to \$669 million.

TABLE 1.--MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS: U.S. PRODUCTION AND SALES, 1981

[Listed below are all miscellaneous end-use chemicals and chemical products for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all miscellaneous end-use chemicals and chemical products for which data on production and/or sales were reported and identifies the manufacturers of each]

¹ Calculated from unrounded figures.

Not available.

Statistics exclude production and sales of tricresyl phosphate. Statistics on tricresyl phosphate are given with the section on "Plasticizers."

^{*}Quantities are given on the basis of solid naphthenate.

*Statistics exclude production and sales of copper naphthenate. Statistics for copper naphthenate are given in the section on "Pesticides and Related Products."

Includes all other items listed in table 2 which are not individually publishable or publishable as groups.

*ENZYMES -- CONTINUED
 *HYDROLYTIC ENZYMES -- CONTINUED
   *AMYLASES -- CONTINUED
     Glucoanylase - - - - - - - - - - - - - : CRN.
      Anylases, all other------- GBF, PFZ, RH.
      Bromelain- - - - - - - - - - - - - - - : DOL.
      Papain - - - - - - GBF, PFZ.
      Pepsin - - - - - - - - - - - - - - - : CHH, SPR.
      Protease (bacterial) - - - - - - - - - : GBF. MLS.
      Rennet (microbial) - - - - - - - - - - - : GBF. PFZ.
     *Rennin - - - - : CHH. GBF. MLS. PFZ.
      Proteases, all other - - - - - - - - - : PIC, PMP, SPR.
    Pectinase- - - - - - - - - - - - - - - - - : GBF.
    Hydrolytic enzymes including pectic enzymes and
     lipase. all other - - - - - - - - - - : BCK, JFR, MLS, RH, WBC.
HYDROLYTIC ENZYMES:
  NON-HYDROLYTIC ENZYMES:
    Cholesterol oxidase- - - - - - - - - - : BCK. UPJ.
    Glucose oxidase- - - - - - - - - - - - - - : BCK.
    Glucose-6-phosphate dehydrogenase- - - - - - - : BCK.
    Glycerol kinase- - - - - - - - - - - - - : BCK.
    Nonhydrolytic enzymes- - - - - - - - - - - - : OMS, PLB.
*FLOTATION REAGENTS:
  PHOSPHORODITHIOATES (DITHIOPHOSPHATES):
    Dicresylphosphorodithioic acid - - - - - - - - : ACY.
    Dicresylphosphorodithioic acid, ammonium salt- - - : ACY.
    Dicresylphosphorodithioic acid, sodium salt- - - - : KCU.
    Phosphorodithioates used as floatation reagents,
      all other- - - - - - - - - - - - - - : ESX.
  OTHER FLOTATION REAGENTS:
    Allyl n-butyl trithiocarbonate - - - - - - - - : PLC.
    Rosin amines - - - - - - - - - - - - - - - : HPC
    Thiocarbanilide (Diphenylthiourea) - - - - - : ACY.
    Xanthates and sulfides - - - - - - - - - - : PFZ.
    Flotation reagents, all other- - - - - - - - : KCU.
"FUEL ADDITIVES:
  N.N'-Di-sec-butyl-p-phenylenediamine - - - - - - - USR.
   Diesel fuel additives- - - - - - - - - - - : DUP, TNA.
  N.N'-Diisopropyl-p-phenylenediamine- - - - - - - : DUP, USR.
  *N.S'-Disalicylidene-1,2-propanediamine - - - - - : DUP, FER, GCM, SM, TX.
  *Ethylene dibromide - - - - - - - - - - - : DOW, GTL, PPG. TNA.
  Hexyl mitrate- - - - - - - - - - - - - - : TNA.
  *Methyl-t-butyl ether - - - - - - - - - - - - : ATR, ENJ, PTT, X.
```

Methylcyclopentadienylmanganese tricarbonyl- - - - - : TNA.

Note.—Complete names, telephone numbers, and addresses of the above reporting companies are listed in table 1 of the appendix. The above codes identify those of the 152 reporting companies and company divisions for which permission to publish was not restricted.

STATISTICAL HIGHLIGHTS

Kenneth J. Conant, III and David G. Michels

The term miscellaneous chemicals as it is used here comprises those synthetic organic products that are not included in the use groups covered by sections I-XIV of this report. They include products that are employed in a great variety of uses. The number of chemicals used extensively for only one purpose is not large. Among the products covered are those used for refrigerants, aerosols, solvents, and a wide range of chemical intermediates.

U.S. production of miscellaneous cyclic and acyclic chemicals in 1981 amounted to 95.0 billion pounds, an increase of 0.7 percent, compared with production in 1980. U.S. sales for 1981 totaled 36.1 billion pounds, valued at \$11.7 billion. Compared with 1980, sales quantity decreased 0.2 percent, while sales value increased by 0.6 percent. Production of miscellaneous cyclic chemicals comprised only 2.5 percent of this section's total production.

The group among miscellaneous acyclic chemicals with the greatest volume of production and sales is the halogenated hydrocarbons. Production of chlorinated hydrocarbons (not otherwise halogenated), the largest segment of this group, decreased from 22.9 billion pounds in 1980 to 22.0 billion pounds in 1981, or by 4.3 percent. Sales of chlorinated hydrocarbons declined from 7.5 billion pounds in 1980 to 7.0 billion pounds in 1981, or by 7.0 percent. Production of fluorinated hydrocarbons increased in 1981.

TABLE 1.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS: U.S. PRODUCTION AND SALES, 1981

[Listed below are all miscellaneous cyclic and acyclic chemicals for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all miscellaneous cyclic and acyclic chemicals for which data on production and/or sales were reported and identifies the manufacturers of each]

¹Calculated from rounded figures.

²Statistics exclude production and sales of fatty amines. Statistics on fatty amines are included in the section "Surface-Active Agents."

³Statistics exclude production and sales of potassium and sodium stearates. Statistics on these stearates are included in the section "Surface-Active Agents."

*Statistics for production of specially denatured alcohol, 209,852,956 wine gallons, and completely denatured alcohol, 20,442,774 wine gallons, for calendar year 1981 are compiled from data supplied by the Bureau of Alcohol, Tobacco, and Firearms. Production of ethyl alcohol for fuel use is estimated to have been 700 million gallons in

⁵The production data for 1980 were overstated.

"Some polyols which are used as intermediates for urethanes have been included in the section "Plastics and Resin Materials."

71981 production of glycerol, both natural and synthetic, was 280 million pounds, as reported by the U.S. Department of Commerce.

                                                        (ACCORDING TO LIST IN TABLE 3)
               CYCLIC--CONTINUED
  4-Methoxyphenol- - - - - - - - - - - - - : ASL, EKT.
  Methylaziridine----: ARS.
  2.2'-Methylenebis[4-chlorophenol] (Dichlorophene) : GIV.
  2,2'-Methylenebis-(4-methyl-6-tert-butylphenol)- - - : SW.
  2.2'-Methylenebis[3.4.6-trichlorophenol] :
    (Hexachlorophene)- - - - - - - - - - - - - GIV.
  4-Methylmorpholine - - - - - - - - - - - - : TX.
  1-Methyl-2-pyrolidone.monomer- - - - - - - - - - : GAF.
  5-Methyl resorcinol (Orcinol) - - - - - - - - - : PD.
  Methyltetrahydrophthalic anhydride - - - - - - - : MIL.
  Morpholine - - - - - - - - - - - - - - - - : DOW, TX.
  Morpholine salt of p-toluene sulfonic acid - - - - - : AMB.
  Neopentyl glycol dibenzoate- - - - - - - - - - : VEL.
  Octabromodiphenyl oxide- - - - - - - - - - - - : GTL.
  Oxalyl bis(benzylidene hydrazide)- - - - - - - - : EKT.
  Pentaerythritol tribenzoate- - - - - - - - - - VEL
  Phenothiazine----: WAG.
  2-Phenoxyethanol (Ethylene glycol monophenyl ether) : DOW, TCH. 2-(2-Phenoxyethoxy)ethanol (Diethylene glycol phenyl :
   ether) - - - - - - - - - - - - - - - - : DOW.
  3-Phenyl-7-(1'-diazo-2'-naphthylamine)-coumarin- - - : S.
  Phenyl glycidyl ether- - - - - - - - - - - - : WLN.
  Phenyl hydrogen phosphate- - - - - - - - - - - : SM.
  Phenyl mercuric borate - - - - - - - - - - - 1 FER.
  Phthalic acid, lead salt, (Dibasic) - - - - - - - - ALI.
  Picramic acid, sodium salt - - - - - - - - - - : SDC.
  Pinane - - - - - : SCM.
  Pinane hydroperoxide - - - - - - - - - - - - - : SCM.
  2-Pinanol (cis and trans)- - - - - - - - - - : SCM.
 *6-Pinene - - - - - - - - - - - - - - - : ARZ, HPC, NCI, RCI, SCM.
  Pinene, sulfate----: ARZ, HPC.
  Pinene, wood - - - - - - - - - - - - - : HPC.
  Poly-4-(2-acryloxyethoxy)-2-hydroxybenzophenone- - - : ACY.
  Poly(dibromophenylene oxide) - - - - - - - - - - : GTL, VEL.
  Polyethylene glycol, a-nonylphenyl ether - - - - - : BAK.
  Polypropylene glycol glycerol triether and
    epichlorohydrin bisphenol epoxy resin- - - - - - : BAK.
  Propyl gallate - - - - - - - - - - - - - - : EKT.
  Resorcinol diglycidyl ether- - - - - - - - - : WLN.
  Resorcinol monobenzoate- - - - - - - - - - - - : EKT.
```

TABLE 2 .-- MISCELLANEOUS CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE REPORTED, IDENTIFIED BY MANUFACTURER. 1981--CONTINUED

MISCELLANEOUS CHEMICALS MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3) ACYCLIC -- CONTINUED *HALOGENATED HYDROCARBONS -- CONTINUED *FLUORINATED (INCLUDING OTHER FLUOROHALOGENATED) HYDROCARBONS -- CONTINUED 1,1-Difluoroethane - - - - - - - - - - : DUP. Hexafluoropropylene, monomer- - - - - - - - : DUP. 1-Iodoperfluorohexane- - - - - - - - - - : DUP. Polytetrafluoroethylene ethyl iodine - - - - - : DUP. Tetrafluoroethylene, monomer - - - - - - - - : DUP, ICI, SCM. Tetrafluoromethane - - - - - - - - - - : DUP. *Trichlorofluoromethane (F-11)-----: ACS, DUP, KAI, PAS, RCN. Trichlorotrifluoroethane - - - - - - - - - - : ACS, DUP. Trifluoroethyl trichloromethane sulfonate - - - : OMC. Vinyl fluoride, monomer- - - - - - - - - - DUP. Vinylidene fluoride, monomer - - - - - - - : PAS. Fluorinated (Including other fluorohalogenated) : hydrocarbons, all other----- bup, ICI. *IODINATED (NOT OTHERWISE HALOGENATED) HYDROCARBONS: : Diiodomethane (Methylene iodide) - - - - - - : NTB, RSA. Iodoethane (Ethyl iodide), non-medical- - - - : COC, FMT, RSA. Iodoform (Triiodomethane) - - - - - - - - : NTB. Iodomethane (Methyl iodide) - - - - - - - : COC. DPW. FMT. RSA. Iodinated (Not otherwise halogenated) hydrocarbons, all other - - - - - - - - : ALD, COC, RSA. Halogenated hydrocarbons, all other- - - - - - : PEL. *OTHER MISCELLANEOUS ACYCLIC CHEMICALS: Acetyl peroxide- - - - - - - - - - - - - - : WTL. Aluminum isopropoxide (Aluminum isopropylate) - - - : CHT, KCH. tert-Butyl peroxide (Di-tert-butyl peroxide) - - - : AZT, SHC, WTL. *Carbon disulfide - - - - - - - - - - - - - : FMB, PAS, PPG, SFI.
Decanoyl peroxide - - - - - - - - - - - : WTC, WTL. 2,3-Dibromopropanol- - - - - - - - - - - : GTL. Diethylphosphorous chloride- - - - - - - - - : TNA. 2.5-Dimethyl-2.5-bis(2-ethyl-1-hexanoyl peroxy) : hexane - - - - - - - - - - - - - - - - : WTL. 2,5-Dimethyl-2,5-di(tert-butylperoxy)hexane- - - - : WTL. 2,5-Dimethyl-2,5-di(tert-butylperoxy)hexyne-3- - - : WTL. *EPOXIDES, ETHERS, AND ACETALS: Alkyl glycidyl ethers. C:1-C:4 - - - - - - - : NIN.

Alkyl glycidyl ethers. Ca-Cto- - - - - - - - : WIN. 1-(Allyloxy)-2,3-epoxypropane (Allyl glycidyl :

Bis(2-chloroethoxy)methane (Dichloroethylformal) : TKL.

ether) - - - - - - - - - - - - - - : AAC, BLM, CPS.

U.S. IMPORTS OF BENZENOID CHEMICALS AND PRODUCTS

U.S. general imports of benzenoid chemicals and products entered under the Tariff Schedules of the United States (TSUS), schedule 4, part 1, subparts B and C are analyzed by the U.S. International Trade Commission annually and published in detail in a separate report. General imports of benzenoid items entered in parts 1B and 1C totaled 6,581 million pounds with an entered value of \$1,205.9 million in 1981 compared with 5,591 million pounds with a foreign invoice value of \$1,075.6 million in 1980. Details are shown in table 2.

Industrial organic chemicals that are entered under part 1B consist chiefly of benzenoid intermediates and small quantities of acyclic compounds which are derived in whole or in part from benzenoid compounds. Also included are mixtures and small quantities of finished products not specially provided for in part 1C (e.g., rubber-processing chemicals). In terms of value, 27.9 percent of all the benzenoid imports under part 1B in 1981 came from West Germany; 23.2 percent, from Japan; 9.8 percent, from the United Kingdom; and 7.1 percent, from Switzerland.

Finished organic chemical products entered under part 1C include dyes, pigments, medicinals, flavor and perfume materials, pesticides, plastics materials, and certain other specified products. In terms of value 21.7 percent of all finished benzenoid imports under part 1C in 1981 came from West Germany; 19.9 percent, from Japan; 15.1 percent, from the United Kingdom; and 13.4 percent, from Switzerland.

¹Imports of Benzenoid Chemicals and Products, 1981, USITC Publication 1272, July 1982.

²Entered value and foreign invoice value are comparable for 1980-81.

TABLE 2.--BENZENOID CHEMICALS AND PRODUCTS: SUMMARY OF U.S. GENERAL IMPORTS ENTERED UNDER SCHEDULE 4,
PARTS 1B AND 1C, OF THE TSUS, 1981

| Part | QUANTITY | PERCENT OF TOTAL QUANTITY | ENTERED VALUE | PERCENT OF ENTERED VALUE | UNIT ENTERED VALUE |
|--|------------------------|------------------------------------|------------------|-----------------------------------|--------------------------|
| | <u>1,000</u> pounds | : | 1,000 pounds | | Per pound |
| Schedule 4, Part 1B and: 1C, total: | 658,076 | : : 100.0 | : :1,205,910: | 100.0 | \$1.83 |
| Schedule 4, Part 1B-: | 378,576 | : : 57.5 | : 437,266: | 36.3 | 1.16 |
| Schedule 4, Part 1C-: | 279,500 | : 42.5 | : 768,644: | 63.7 | 2.75 |
| | | | : : | | |

Source: Compiled by the U.S. International Trade Commission from records of the U.S. Customs Service.

Note--The totals shown in this table differ from those given in the official statistics of the U.S. Department of Commerce chiefly because of differences in coverage and in the methods used in compiling the data.

TABLE 3.--Cyclic Intermediates: Glossary of synonymous names

| | STANDARD (CHEMICAL ABSTRACTS) NAME |
|--------------------------------|--|
| | |
| A Acid | : 3,5-Dihydroxy-2,7-naphthalenedisulfonic acid. |
| Acetyl-p-phenylenediamine | : 4'-Aminoacetanilide. |
| 1,2,4-Acid | : 4-Amino-3-hydroxy-1-naphthalenesulfonic acid (1-Amino-2- |
| Acid yellow 9 | : naphthol-4-sulfonic acid). |
| Acid yellow 9 | : b-Amino-3,4'-azodibenzenesulfonic acid. |
| p-Aminobenzenesulfonic acid | : Sulfanilic acid and sait. |
| M-Aminobenzoyi J acid | : 4-Hydroxy-7-(m-aminobenzamido)-2-naphthalenesulfonic acid. |
| Amino G acid | : 6-Amino-1,6-naphthalenedisulfonds acid. |
| Amino J acid | : /-Amino-i,3-naphthalenedisulfonic acid. |
| Amino R salt | 3 Amino-1, 3-naphthalenedisulfonic acid |
| Aniline oil | Anilina |
| Anthraflavic acid | 2.6-Dihydroxyanthraguinone |
| Anthrarufin | 1.5-Dihydroxyanthraquinone. |
| Armstrong & Wynne's acid | : 4-Hydroxy-2-naphthalenesulfonic acid. |
| | |
| B Acid | 5-Amino-4-hydroxy-1,7-naphthalenedisulfonic acid. |
| 2B Acid | : 6-Amino-4-chloro-m-toluenesulfonic acid. |
| 48 Acid | : 6-Amino-m-toluenesulfonic acid. |
| Benzal chloride | a.a-Dichlorotoluene. |
| Benzanthrone | : 7H-Benz[de]anthracen-7-one. |
| Benzotrichloride | a.a.a-Trichlorotoluene. |
| Bisphenol A | : 4.4'-Isopropylidenediphenol. |
| B.O.N | : 3-Hydroxy-2-naphthoic acid. |
| Broenner's acid | 6-Amino-2-naphthalenesulfonic acid. |
| Bromamine acid | : 1-Amino-4-bromo-2-anthraguinonesulfonic acid. |
| Bromobenzanthrone | : 3-Bromo-7H-benz[de]anthracen-7-one |
| | |
| C Acid (Cassella acid) | : 3-Amino-1,5-naphthalenedisulfonic acid. |
| C.A. Acid | : 3-Amino-6-chloro-4-sulfobenzoic acid. |
| C-Amine (Lake Red C acid) | : 2-Amino-5-chloro-p-toluenesulfonic acid. |
| Chicago Acid (SS acid) | 4-Amino-5-hydroxy-1,3-naphthalenedisulfonic acid. |
| Chlorobenzanthrone | |
| Chromotropic acid | 4,5-Dihydroxy-2,7-naphthalenedisulfonic acid. |
| Chrysazin | : 1,8-Dihydroxyanthraquinone. |
| 1,7-Cleve's acid | S-Amino-2-naphthalenesuifonic acid. |
| Crocein acid | 7-Hudrowy-1-maphthalanosulfonic acid |
| 2-Cyanopyridine | |
| 3-Cyanopyridine | Nicotinonitrile. |
| Cyanuric chloride | 2.4.6-Trichloro-s-triazine. |
| oyallar 20 ollar 200 | 21717 |
| D Acid | 6-Amino-1-naphthalenesulfonic acid. |
| DADT | : Dianisidine diisocvanate |
| DDB | p-Dibutoxybenzene. |
| Decacyclene | Diacenaphtho[1,2-j:1',2'-2]fluoranthene. |
| Dehydrothio-p-toluidine | 2-(p-Aminophenyl)-6-methylbenzothiazole. |
| Developer Z | 3-Methyl-1-phenyl-2-pyrazolin-5-one. |
| o-Dianisidine | 3,3'-Dimethoxybenzidine. |
| 1,1'-Dianthrimide | : 1,1'-Iminodianthraquinone. |
| Dibenzanthrone | : Violanthrone. |
| Dichlone | : 2,3-Dichloro-1,4-naphthoquinone. |
| 4,4'-Dihydroxydiphenylsulfone | |
| Dimethyl POPOP | : 1,4-Bis[2-(4-methy1-5-phenyloxazoly1)]benzene. |
| 4,5-Dinitrochrysazin | : 1,8-Dihydroxy-4,5-dinitroanthraquinone. |
| Dioxy S acid | : 4,5-Dihydroxy-1-naphthalenesulfonic acid. |
| Diphenyl Epsilon Acid | : 6,8-Dianilino-l-haphthalenesulfonic acid. |
| Durene | : 1,2,4,5-Tetramethylbenzene. |
| | 8-Hydroxy-1.6-naphthalenedisulfonic acid. |
| Epsilon Acid (Andresen's acid) | - Warry - I - me |
| . T | |
| F Acid | : 7-Hydroxy-2-naphthalenesulfonic scid. |
| F Acid | : : 7-Hydroxy-2-naphthalenesulfonic acid. : 2-Nitro-p-toluidine [NH:=1]. |
| F Acid | : 7-Hydroxy-2-naphthalenesulfonic acid. : 2-Nitro-p-toluidine [NH2=1]. : 5-Nitro-o-anisidine [NH4=1]. |
| F Acid | : 7-Hydroxy-2-naphthalenesulfonic acid. : 2-Nitro-p-toluidine [NH ₂ =1]. : 5-Nitro-o-anisidine [NH ₂ =1]. : 1,3,3-Trimethy1-δ ² ,α-indolineacetaldehyde. |

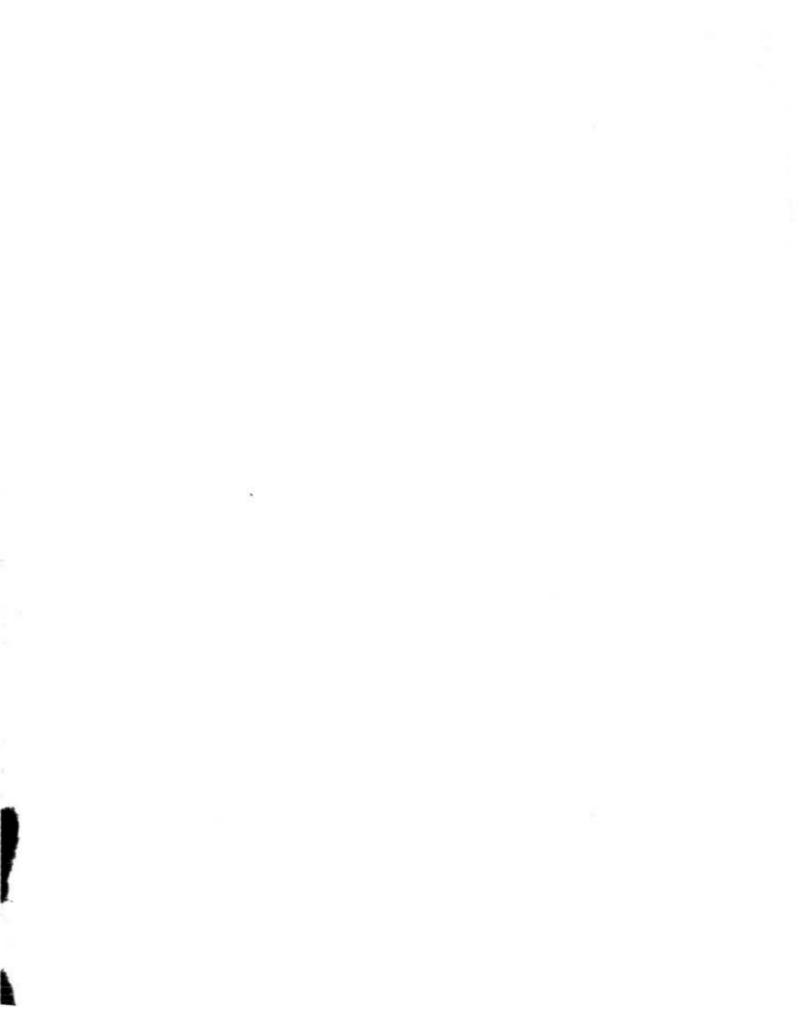

TABLE 3,--Cyclic Intermediates: GLOSSARY OF SYNONYMOUS NAMES--CONTINUED

| saltamma acid | + 6-Amino-4-hydroxy-2-nanhthalenesulfonic acid sodium salt |
|--|--|
| | : 9,10-Dihydro-9,10-dioxo-1-anthracenesulfonic acid and salt. |
| | : 4-Amino-5-hydroxy-2,7-naphthalenedisulfonic acid, : (8-Amino-1-naphthol-3,6-disulfonic acid). |
| ellimellitene | |
| ndoxylsodurene | : 3(2H)-Indolone. : 1,2,3,5-Tetramethylbenzene. |
| AcidAcid Urea | : 7-Amino-4-hydroxy-2-naphthalenesulfonic acid, sodium salt. : 7,7'-Ureylenebis[4-hydroxy-2-naphthalenesulfonic acid]. |
| Acid | : 4-Amino-5-hydroxy-1.7-naphthalenedisulfonic acid. |
| och's Acid | : 8-Amino-1,3,6-naphthalenetrisulfonic acid. |
| Acid | : 5-Hydroxy-1-naphthalenesulfonic acid. |
| ake Red C amineaurent's acid | : 5-Amino-1-naphthalenesulfonic acid. |
| Acid | : : 8-Amino-4-hydroxy-2-naphthalenesulfonic acid. : 5-Ethyl-2-picoline (2-Methyl-5-ethylpyridine). |
| esitylene | : 3-Ethyi-2-picoline (2-Methyi-3-ethyipyridine). |
| ethane base | : 4.4'-Methylenebis[N.N-dimethylaniline]. |
| ichler's hydrol | : 4,4'-Bis[dimethylamino]benzhydrol; |
| ichler's ketone | : 4.4'-Bis[dimethylamino]benzophenone. |
| OCA | : 3,3'-Dichloro-4,4'-diaminodiphenylmethane |
| VP | : 5-Vinyl-2-picoline. |
| aphthionic acid | : 4-Amino-l-naphthalenesulfonic acid. |
| -Naphthionic acid | : 1-Amino-2-naphthalenesulfonic acid. |
| -Naphthol | : 2-Naphthol, tech. |
| aphthol AS | : 3-Hydroxy-2-naphthanilide. |
| -Naphthylamineeville 5 Winther's acid | : 1-Naphthylamine. |
| -Nitrobenzoyl J acid | : 4-Hydroxy-1-naphthalenesulfonic acid. : 4-Hydroxy-7-(m-nitrobenzamido)-2-naphthalenesulfonic acid. |
| xy Koch's acid | : 1-Naphthol-3,6,8-trisulfonic scid. |
| entaanthrimide | : 1,4,5,8-Tetrakis(1-anthraquinonylamino)anthraquinone. |
| eri Acid | : 8-Amino-1-naphthalenesulfonic acid. |
| henylbiphenyl | : Terphenyl. |
| -Phenyldiethanolamine | : 2,2'-[(Phenyl)imino]diethanol. |
| henyl Gamma acid | : 6-Anilino-4-hydroxy-2-naphthalenesulfonic acid. |
| henyl J acid | : 7-Anilino-4-hydroxy-2-naphthalenesulfonic acid. |
| henyl peri acidicric acid | : 8-Anilino-l-naphthalenesulfonic acid. |
| OPOP | : 2,4,6-irinitrophenoi. |
| seudocumene | 1 2 4-Trimathulhanzone |
| yrazoleanthrone | : Anthra[1.9-cd]pyrazol-6(2H)-one. |
| yrazoleanthrone yellow | : [3,3'-Bianthra[1,9-cd]pyrazole]-6,6'-(2H,2'H)dione. |
| yrazolone T | : 5-Oxo-1-(p-sulfophenyl)-2-pyrazoline-3-carboxylic acid. |
| uinizarin | : 1,4-Dihydroxyanthraquinone. |
| -Quinizarinsulfonic aciduinoline yellow base | : 9,10-Dihydro-1,4-dihydroxy-9,10-dioxo-2-anthracenesulfonic aci: Quinophthalone. |
| salt | : 3-Hydroxy-2,7-naphthalenedisulfonic acid, disodium salt. |
| G Acid (Violet acid) | : 4-Hydroxy-2.7-naphthalenedisulfonic scid. |
| hoduline acid (J Acid Imide) | : 7.7'-Iminobis[4-hydroxy-2-naphthalenesulfonic acid]. |
| R acid | : 3-Amino-5-hydroxy-2,7-naphthalenedisulfonic acid. |
| Acid | 4-Amino-5-hydroxy-1-naphthalenesulfonic acid. |
| chaffer's acid | : 6-Hydroxy-2-naphthalenesulfonic acid. |
| ilver salt | : 9,10-Dihydro-9,10-dioxo-2-anthracenesulfonic acid and salt. |
| olvent Yellow 1 | : p-Phenylazoaniline and hydrochloride. |
| olvent Yellow 3 | : 4-(o-Tolylazo)-o-toluidine. |
| s Acid (Chicago acid) | : 4-Amino-5-hydroxy-1,3-naphthalenedisulfonic acid. |
| ulfanilic acid | : p-aminobenzenesuitonic acid. |
| -Sulfobenzaldehyde | : o-Formylbenzenesulfonic acid. |

TABLE 3.--CYCLIC INTERMEDIATES: GLOSSARY OF SYNONYMOUS NAMES--CONTINUED

| COMMON NAME : | STANDARD (CHEMICAL ABSTRACTS) NAME | | |
|----------------------------|---|--|--|
| Tetralin: | 1.2.3.4-Tetrahydronaphthalene. | | |
| Thioindoxyl: | 3(2H)-Thianaphthenone. | | |
| Thiosalicylic acid | | | |
| Tobias Acid:: | 2-Amino-1-naphthalenesulfonic acid. | | |
| TODI | Bitolylene diisocyanate. | | |
| o-Tolidine:: | 3,3'-Dimethylbenzidine. | | |
| n-Toluic acid:: | Phenylacetic acid. | | |
| a-Tolunitrile: | Phenylacetonitrile. | | |
| 4-m-Tolylenediamine:: | Toluene-2,4-dismine. | | |
| Trimellitic anhydride:: | 1,2,4-Benzenetricarboxylic acid, 1,2-anhydride. | | |
| Trimethyl base:: | | | |
| Trinitrophenol:: | Picric scid. | | |
| | | | |
| Urea J Acid (J Acid Urea): | 7,7'-Ureylenebis[4-hydroxy-2-naphthalenesulfonic acid]. | | |
| | | | |
| Veratraldehyde | 3,4-Dimethoxybenzaldehyde | | |
| Veratrole:: | | | |
| Vinyltoluene: | | | |
| Violet acid (RG Acid): | 4-Hydroxy-2,7-naphthalenedisulfonic acid. | | |
