U.S. INTERNATIONAL TRADE COMMISSION RELEASES REPORT ON MOTOR VEHICLE TRADE DATA

The United States International Trade Commission today announced its release of an annual statistical report on automotive trade data. This report, entitled Automotive Trade Statistics, 1964-76, Series A: Motor Vehicles: Statistical data relating to U.S. factory sales, imports, exports, apparent consumption, and U.S. trade balances with Canada and all other countries, is the seventh annual compilation of automotive trade statistics.

The material presented in these tables provides information on U.S. factory sales, imports, exports, apparent consumption, and bilateral trade balances for new passenger automobiles, automobile trucks, truck chassis and cabs, motor buses, snowmobiles, miscellaneous motor vehicles, and motor vehicle parts for the years 1964-76. The bilateral trade balances deal primarily with U.S.-Canadian trade, but there are also tables showing aggregate U.S. trade with other countries. In addition, there are a limited number of tables showing the duties collected and the average unit value of certain motor vehicles.

Preface

This is the seventh annual compilation of automotive trade statistics; the first was prepared by the United States International Trade Commission (formerly the United States Tariff Commission) in 1971 in response to an informal request from the Congress.

The material presented in these tables provides information on U.S. factory sales, imports, exports, apparent consumption, and bilateral trade balances for new passenger automobiles, automobile trucks, truck chassis and cabs, motor buses, snowmobiles, miscellaneous motor vehicles, and motor vehicle parts for the years 1964-76. The bilateral trade balances deal primarily with U.S.-Canadian trade, but there are also tables showing aggregate U.S. trade with other countries. In addition, there are a limited number of tables showing the duties collected and the average unit value of certain motor vehicles.

The data presented herein on imports and exports were compiled principally from official statistics of the U.S. Department of Commerce; data relating to U.S. factory sales were provided by the Motor Vehicle Manufacturers Association (automobiles, trucks, and buses) and the International Snowmobile Industry Association. Unless otherwise indicated, all annual data are for calendar years, and dollar amounts are presented in U.S. dollars.

It should be noted that insignificant revisions (not more than 0.01 percent) have been made in the annual data reported in the Commission's report of May 1976 for U.S. exports of new passenger automobiles

(sec. I, tables 1B, 1D, and 1E); such revisions are also reflected in tables appearing in sections VI (tables 6B, 6D, and 6E), VIII (tables 8B, 8D, and 8E), XI (table 11B), and XIV (tables 14B, and 14C).

1/ Virtually all imports from Japan under this category are of chassis cabs and their cargo boxes or flatbeds. A chassis cab consists of a completed truck lacking only the cargo box or flatbed that is installed in a simple operation which takes only a few minutes and which is performed after entry into the United States. The bulk of the other dutiable imports under this category are of the same type of merchandise. The remaining entries, including a substantial quantity of the duty-free imports from Canada, are of a wide variety of truck and bus chassis and bodies.

Source: Official statistics of the U.S. Department of Commerce, except as noted.

Note.--The data shown above for imports under TSUSA items 692.2000 and 692.2100 were obtained by dividing the data officially reported by the U.S. Department of Commerce by 2 in order to account for separate importation of chassis cabs and their cargo boxes or flatbeds.

1/ Virtually all imports from Japan under this category are of chassis cabs and their cargo boxes or flatbeds. A chassis cab consists of a completed truck lacking only the cargo box or flatbed that is installed in a simple operation which takes only a few minutes and which is performed after entry into the United States. The bulk of the other dutiable imports under this category are of the same type of merchandise. The remaining entries, including a substantial quantity of the duty-free imports from Canada, are of a wide variety of truck and bus chassis and cabs.

Source: Calculated from the official statistics of the U.S. Department of Commerce and the prevailing rates of duty applicable to the particular TSUSA items concerned.

Table 2K.--Automobile trucks and truck and bus chassis and bodies: Weighted average unit values of U.S. imports for consumption from Japan, from Canada, and from all other countries, by TSUSA items, 1968-76

1 Virtually all imports from Japan under this category are of chassis cabs and their cargo boxes or flatbeds. A chassis cab consists of a complete truck lacking only the cargo box or flatbed that is installed in a simple operation which takes only a few minutes and which is performed after entry into the United States. The bulk of the other dutiable imports under this category are of the same type of merchandise. The remaining entries, including a substantial quantity of the duty-free imports from Canada, are of a wide variety of truck and bus chassis and bodies.

Source: Official statistics of the U.S. Department of Commerce, except as noted.

Note.--The data shown for imports under TSUSA items 692.2000 and 692.2100 were obtained by dividing the data officially reported by the U.S. Department of Commerce by 2 in order to account for separate importation of chassis cabs and their cargo boxes or flatbeds.
