PRICE DATA

III-2. (a) **Does your firm sell glycine that is imported to unrelated U.S. firms?**
 No Yes

If yes, please report the quarterly quantity and value data for your commercial shipments to unrelated U.S. firm since 2005 of the products on the following page (III-3a and III-3b). Please note that the total value dollar values for imported glycine sold to unrelated customers should be f.o.b., U.S. point of shipment and should not include U.S.-inland transportation costs to your first U.S. warehouse or storage facility. Total dollar values should reflect the *final net* amount paid to you (i.e., should be net of all deductions for discounts or rebates). See instruction booklet.

(b) **Does your firm import glycine for your own use?**
 No Yes

If yes, please report the quarterly quantity and value data for your imports since 2005 of the products on pages 17-19 (III-3c and III-3d). Please report these values on a delivered basis, (net of returns, discounts, allowances, and rebates), including all ocean freight and U.S.-inland freight costs for delivery to your facility.

PART III.--PRICING AND MARKET FACTORS--Continued

Product 1.-- Pharmaceutical-grade glycine - A white, odorless, crystalline powder with a sweet taste, having an assay (glycine content) of 98.5 percent to 101.5 percent (dry basis), and with no more than 70 ppm chloride, no more than 65 ppm sulfate, and no more than 10 ppm heavy metals.

Product 2.-- USP-grade glycine - A white, odorless, crystalline powder with a sweet taste, having an assay (glycine content) of 98.5 percent to 101.5 percent (dry basis), and with no more than 70 ppm chloride, no more than 65 ppm sulfate, no more than 20 ppm heavy metals, and not otherwise qualifying as pharmaceutical-grade glycine.

Product 3.-- Technical-grade glycine - A white, off-white, or slightly yellow crystalline powder, having an assay (glycine content) of 98.5 percent to 101.5 percent (dry basis), with no more than 200 ppm sulfates, and not otherwise qualifying as USP-grade glycine.

Note.—The pricing product data should reflect the end use for which the glycine in question is sold. The purity requirements listed for each pricing product reflect minimum purity requirements for end users in those markets. Any glycine that could be sold into a higher purity end use but is not should be recorded as a sale to the market into which it is sold. For example, if a producer produces glycine meeting the specifications for use in deodorant applications (USP grade) but sells that product for metal complexing (technical grade), that sale should be recorded as a technical grade sale.
