**III. Other product information, including uses/applications and source(s) of imports**

The subject products are alginic acid and salts of alginic acid. Alginates are a naturally occurring family of carbohydrates extracted from brown seaweeds. These products are used as thickeners, gels, and dispersion agents, particularly in applications such as bakery creams and dental impressions. Alginic acid and magnesium alginate are also used in anti-reflux suspensions and tablets. The subject products are imported from Norway and the United Kingdom.
