THE UNITED STATES INTERNATIONAL TRADE COMMISSION  
In the Matter of: )  
POLYVINYL ALCOHOL FROM ) Investigation Nos.:  
CHINA, JAPAN, AND KOREA ) 731-TA-1014, 1016 and 1017  
(Review)

Tuesday,  
January 29, 2009

Room No. 101  
U.S. International  
Trade Commission  
500 E Street, S.W.  
Washington, D.C.

The hearing commenced, pursuant to notice, at  
9:33 a.m. before the Commissioners of the United States  
International Trade Commission, the Honorable SHARA L.  
ARANOFF, Chairman, presiding.

APPEARANCES:

On behalf of the International Trade Commission:

Commissioners:

SHARA L. ARANOFF, CHAIRMAN  
DANIEL R. PEARSON, VICE CHAIRMAN  
CHARLOTTE R. LANE, COMMISSIONER  
IRVING A. WILLIAMSON, COMMISSIONER  
DEAN A. PINKERT, COMMISSIONER

APPEARANCES: (Cont'd.)

Staff:

MARILYN R. ABBOTT, SECRETARY TO THE COMMISSION  
SHARON BELLAMY, HEARINGS AND MEETINGS ASSISTANT  
ANGELA WISSLER, INVESTIGATOR  
JEFFREY CLARK, INTERNATIONAL TRADE ANALYST  
CATHERINE DeFILIPPO, ECONOMIST  
CHARLES YOST, ACCOUNTANT/AUDITOR  
MARY JANES ALVES, ATTORNEY  
DOUGLAS CORKRAN, SUPERVISORY INVESTIGATOR

In Support of Continuation of Antidumping Duty Orders:

On behalf of Celanese, Ltd. and E.I. DuPont de Nemours  
& Co.

LOU PURVIS, General Manager, Polyvinyl Alcohol  
Business, Celanese, Ltd.  
LAURA KORTE, Vinyls Business Manager, E.I. DuPont  
de Nemours & Co.  
EUGENE BARTOLOMEO, Product Line Manager, Celanese,  
Ltd.  
JEANNE WALKER, Associate General Counsel, Celanese  
International Corporation  
MIRIAM RONCHI, Elvanol Product Manager, E.I.  
DuPont de Nemours & Co.  
ELAINE OLSEN, International Trade Specialist, E.I.  
DuPont de Nemours & Co.

JOHN D. GREENWALD, Esquire  
RONALD I. MELTZER, Esquire  
PATRICK MCLAIN, Esquire  
RAMAN SANTRA, Esquire  
WilmerHale  
Washington, D.C.

APPEARANCES: (Cont'd.)

In Opposition to Continuation of Antidumping Duty  
Orders:

On behalf of Solutia Inc. (Solutia):

MICHAEL BEREZO, Vice President, Global  
Procurement, Solutia  
DAVID McCOOL, Vice President and Deputy General  
Counsel, Solutia  
TIM FEAST, President, Saflex, Solutia  
RICHARD BOLTUCK, Economist, CRA International

MICHAEL T. SHOR, Esquire  
SARAH A. FRIEDMAN, Esquire  
Arnold & Porter LLP  
Washington, D.C.

C O N T E N T S

Confidential Session: 229 through 298

P R O C E E D I N G S

(9:33 a.m.)

CHAIRMAN ARANOFF: Good morning again. On behalf of the U.S. International Trade Commission I welcome you to this hearing on Investigation Nos. 731-TA-1014, 1016 and 1017 (Review) involving Polyvinyl Alcohol From China, Japan and Korea.

The purpose of these five year review investigations is to determine whether revocation of the antidumping duty orders covering polyvinyl alcohol from China, Japan and Korea would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.

Before I begin, I would note that the Commission has granted in part a request from those in opposition to continuation of the orders to hold a portion of this hearing in camera. We will begin with public presentations by Petitioners and by Solutia. We will then have a 10 minute in camera session by Solutia, followed by a 10 minute in camera rebuttal presentation by Petitioners if so desired.

Only signatories to the administrative protective order will be permitted in the hearing room during the in camera sessions. Following the in

1 camera presentations, we will resume with public  
2 rebuttal and closing remarks.

3 Schedules setting forth the presentation of  
4 this hearing, notices of investigation and transcript  
5 order forms are available at the public distribution  
6 table. All prepared testimony should be given to the  
7 Secretary. Please do not place testimony directly on  
8 the public distribution table.

9 All witnesses must be sworn in by the  
10 Secretary before presenting testimony. I understand  
11 that parties are aware of the time allocations. Any  
12 questions regarding time allocations should be  
13 directed to the Secretary.

14 Finally, if you will be submitting documents  
15 that contain information you wish classified as  
16 business confidential your requests should comply with  
17 Commission Rule 201.6.

18 Madam Secretary, are there any preliminary  
19 matters?

20 MS. ABBOTT: No, Madam Chairman.

21 CHAIRMAN ARANOFF: All right. Welcome to  
22 everyone on this snowy morning.

23 I think this hearing may go fairly late, but  
24 I don't know if anyone's plane will get out of town  
25 tonight anyway, so we're all in this for the duration.

1 Let's please begin with the opening remarks.

2 MS. ABBOTT: Opening remarks in support of  
3 continuation of orders will be by John D. Greenwald of  
4 WilmerHale.

5 CHAIRMAN ARANOFF: Good morning.

6 MR. GREENWALD: Good morning, Madam  
7 Chairman, Commissioners, Commission staff. I am John  
8 Greenwald of Wilmer Cutler Pickering Hale & Dorr. I  
9 am appearing today on behalf of Petitioners, DuPont  
10 and Celanese.

11 It is almost impossible for me to overstate  
12 the harm to the PVA industry in the United States that  
13 revocation of these orders would entail. In today's  
14 economy what's at issue going forward is, frankly,  
15 survival.

16 The condition of the U.S. industry improved,  
17 albeit modestly, when the orders were in effect. That  
18 improvement has always been fragile, and it is -- has  
19 been -- reversible, and in fact the data that you have  
20 before you show that it is already being reversed.

21 The data in the prehearing staff report run  
22 through the third quarter of 2008. Since then, the  
23 bottom has fallen out of the U.S. PVA market. Fourth  
24 quarter 2008 results and first quarter 2009 results  
25 are almost certain to be very grim indeed. At the

1 same time as the bottom has fallen out of PVA demand  
2 not only in the United States, but globally, there has  
3 been an expansion of capacity in the subject  
4 countries.

5 The combination of the postorder improvement  
6 or reduction in subject imports, significant increases  
7 in PVA production capacity in the subject countries,  
8 sharply contracting worldwide demand and relative  
9 attractiveness of the U.S. market in terms of pricing  
10 support only one conclusion, and that is if the orders  
11 were to be revoked subject imports would return  
12 quickly and do so at injurious levels and at injurious  
13 prices.

14 The situation we are facing now is precisely  
15 the same situation that the industry faced when the  
16 orders were first put into effect. At today's  
17 hearing, the opposition to continuation of the orders  
18 will come from one company and we believe one company  
19 only. That is Solutia.

20 Solutia has an interest in access to dumped  
21 imports that is narrow and that is self-serving. In  
22 order to make a case that the revocation of the orders  
23 will not lead quickly to a reoccurrence of material  
24 injury, Solutia has, as we understand their argument,  
25 claimed two things:

1           First, that the orders have not benefitted  
2 the U.S. industry and, second, that because PVA demand  
3 remains strong and in line with global capacity  
4 revocation of the orders would not lead to an increase  
5 in subject imports.

6           Those factual predicates for Solutia's  
7 position are wrong on each and every point. Today's  
8 testimony will confirm that the orders did indeed  
9 benefit the U.S. industry, but for purposes of this  
10 review the more important question is the likely  
11 impact of revocation of the orders going forward in  
12 light of the current situation in both demand and  
13 supply.

14           What we will show you today is that  
15 revocation of these orders will have consequences for  
16 the United States industry that can fairly be called  
17 catastrophic. In an era of severely depressed demand,  
18 and that is what we are in -- make no mistake -- there  
19 is no rational economic basis for assuming that  
20 subject imports would not re-enter the U.S. market in  
21 significant quantities.

22           Solutia's argument, at least as we  
23 understand it, is as if the world stopped in the third  
24 quarter of 2008, and that is simply factually and  
25 legally incorrect.

1           So let me come back to my original point.  
2           Given the condition of Celanese and DuPont's PVA  
3           operations and the prospect of depressed demand not  
4           only for this year, but for the next year, and maybe  
5           two years or more, the likelihood is that the domestic  
6           industry would not survive revocation of these orders  
7           intact.

8           I want to close -- I guess I want to close  
9           right now because my red light is on as I see it, but  
10          I do want you to consider the context in which this  
11          case arises and the economic crisis we are in.

12          Thank you very much.

13          MS. ABBOTT: Opening remarks in opposition  
14          to continuation of orders will be my Michael T. Shor  
15          of Arnold & Porter.

16          CHAIRMAN ARANOFF: You just turned your  
17          microphone off. There you go.

18          MR. SHOR: Good morning, Madam Chairman and  
19          members of the Commission. My name is Michael Shor of  
20          the law firm of Arnold & Porter, and I'm appearing  
21          today on behalf of Solutia.

22          This is a pretty straightforward case, and  
23          the Commission should not be distracted by Mr.  
24          Greenwald's hyperbole. First, these orders did not  
25          benefit the domestic industry. The orders did not

1 result in any increase to the domestic industry's  
2 market share, nor did they permit the U.S. industry to  
3 raise prices. Those are the only two benefits that  
4 could accrue.

5 Both on an average unit basis and on a  
6 product specific basis, the domestic industry prices  
7 in the merchant market were flat to declining in the  
8 two years following the imposition of the orders in  
9 2003 and 2004. The orders simply allowed nonsubject  
10 imports, mostly from Taiwan, to flood the market, more  
11 than replacing the market share lost by subject  
12 imports.

13 Second, subject producers have not built up  
14 huge excess capacity over the period that they are  
15 holding ready to unleash on the U.S. market. The  
16 simple truth is that all the capacity increases that  
17 Mr. Greenwald referred to in China and Japan over the  
18 period have not even kept pace with demand increases  
19 in the markets they served.

20 PVA capacity worldwide was tight in 2007 and  
21 2008, as DuPont and Celanese executives repeatedly  
22 reminded Solutia during their contract negotiations at  
23 the end of last year. China, on which Petitioners  
24 focused most of their attention, is not even export  
25 oriented. It is a huge and fast-growing consumer of

1 PVA. New capacity that has been added has both  
2 replaced old capacity and has met demand growth in  
3 China. In fact, China was a net importer of PVA in  
4 2007.

5 Third, to mix a couple of metaphors, the sky  
6 is not falling on the U.S. industry, nor is the bottom  
7 falling out. That argument is predicated on  
8 Petitioners' highly selective comparisons for two  
9 domestic producers of shipment data only for two  
10 quarters for which the Commission does not even have  
11 data, the fourth quarter of 2008 compared to the  
12 fourth quarter of 2007.

13 Let me highlight several problems with that  
14 data. Did Petitioners mention in presenting that data  
15 that DuPont had production problems and had  
16 unilaterally declared force majeure and had customers  
17 on allocation during the fourth quarter of 2008? Did  
18 they highlight how much they were able to increase  
19 prices in the fourth quarter of 2008? Did they tell  
20 you how much their raw material costs had dropped in  
21 the fourth quarter?

22 Come to think of it, if they are predicating  
23 their entire case on the fourth quarter of 2008, why  
24 did they fail to come forward with complete data,  
25 including profitability data? Yes, PVA demand has

1 declined during the recession, but pricing and  
2 profitability have held up remarkably well.

3 In any event, the Commission is tasked with  
4 evaluating competition in the context of the business  
5 cycle, which means considering both the current  
6 downturn and the inevitable upturn.

7 Demand for PVA in the U.S. and worldwide  
8 grew over the period and will return to growth. In  
9 both 2007 and 2008, the supply situation in the U.S.  
10 and worldwide was tight. DuPont and Celanese put  
11 their U.S. customers on allocation while they  
12 continued to export, and DuPont still has Solutia on  
13 allocation today.

14 The domestic industry has proved itself  
15 unable reliably to meet the levels of demand already  
16 reached. Subject producers have no incentive to  
17 increase exports to the U.S. Even if they did, there  
18 would be no adverse impact on U.S. producers. They  
19 would likely displace the nonsubject imports that  
20 displaced them when the orders were entered.

21 The U.S. industry is largely insulated from  
22 price-based competition by virtue of their  
23 extraordinarily high degree of captive consumption,  
24 their high degree of exports and nonprice factors like  
25 product differences, purchaser desire from multiple

1 sourcing, product qualification requirements,  
2 long-term contracts and other factors that limit  
3 direct price-to-price competition.

4 Thank you very much.

5 MS. ABBOTT: Will the first panel in support  
6 of continuation of antidumping duty orders please come  
7 forward?

8 Madam Chairman, all witnesses have been  
9 sworn.

10 (Witnesses sworn.)

11 CHAIRMAN ARANOFF: Madam Secretary, I think  
12 that the microphone on the podium is still on.

13 (Pause.)

14 CHAIRMAN ARANOFF: Whenever you're ready,  
15 Mr. Greenwald. Please proceed.

16 MR. GREENWALD: Thank you, Madam Chairman.  
17 Once again, we thank the Commission for the  
18 opportunity to be heard.

19 One of the pieces of advice I gave the panel  
20 that's appearing here today is this Commission stands  
21 out in the interest it takes in listening to not so  
22 much lawyers, but the business, the witnesses that  
23 come, and that they will be heard and their testimony  
24 will be understood.

25 We are going to begin our testimony with the

Heritage Reporting Corporation  
(202) 628-4888

1 managers of respectively Celanese's and DuPont's PVA  
2 businesses. They are going to talk to you about PVA  
3 and its uses, the economics of PVA production, U.S.  
4 and global PVA demand and supply and the likely  
5 consequences to their businesses if the orders were to  
6 be revoked.

7 After that, my colleagues and I from  
8 WilmerHale will address, and do so very briefly, legal  
9 issues of potential concern, including like product  
10 definition, cumulation, captive consumption and the  
11 application of the Bratsk doctrine to this review.

12 One last point before we turn it over to the  
13 people you really want to hear from. Imports of PVA  
14 from Taiwan, which were mentioned by counsel for  
15 Solutia, are the subject of a separate antidumping  
16 proceeding.

17 You know very well that Celanese and DuPont  
18 have different views on the effects of imports from  
19 Taiwan on the domestic industry as a standalone  
20 proposition and will express those differences in any  
21 hearing or other exchange that occurs in the  
22 antidumping proceeding on imports from Taiwan.

23 The point here is that both of these  
24 companies agree that whatever the impact of imports  
25 from Taiwan may be, if the orders were to be revoked

1 or occurrence of material injury by reason of PVA  
2 imports from the three subject countries here today or  
3 of interest today is a certainty.

4 With that, let me turn the microphone over  
5 to Lou Purvis of Celanese.

6 MR. PURVIS: Good morning. My name is Lou  
7 Purvis. I'm the general manager of the PVA business  
8 at Celanese Chemicals.

9 As the largest domestic manufacturer of PVA,  
10 obviously we're here in support of continuation of  
11 these orders, which have been critical to the  
12 viability of our production assets in Calvert City,  
13 Kentucky, and in Pasadena, Texas.

14 These orders have had a dramatic and  
15 positive impact on our business in a number of ways.  
16 First of all, it's allowed us to regain market share  
17 in the domestic industry. We'll talk in a minute as  
18 we get through this presentation about why market  
19 share is important as we try to fully utilize our  
20 production assets.

21 The orders have allowed us to gradually  
22 increase prices and expand our margins to the point  
23 where our business is marginally profitable. It's  
24 important for us to note here that we have taken great  
25 caution not to abuse the protection that's been

1       afforded to us under these orders.

2               The health and viability of the domestic  
3       consumer base is critical to our own viability, and we  
4       have seen in the last decade a dramatic exodus of  
5       demand for PVA from our shores. The textile industry,  
6       which was once one of the largest consumers of PVA in  
7       the U.S., is a dramatic example of that. We have  
8       taken great care to increase our prices into the  
9       marketplace at a pace at which the market and  
10      consumers could handle.

11              Thirdly, it's important to note this order  
12      has given us the confidence and the long-term  
13      viability of our business necessary for us to make  
14      reinvestments, reinvestments in R&D to develop new  
15      applications, reinvestments in our process technology  
16      to improve energy efficiency, investments to improve  
17      the safety and reliability of our operations. We have  
18      a demonstrable track record of success in these areas.

19              Folks, this dumping order is now more  
20      important to our business than ever for a couple of  
21      reasons. We have seen through a typical chemical  
22      reinvestment cycle a dramatic build, a dramatic  
23      increase in production capacity of PVA, particularly  
24      in subject countries, driven by growth in those  
25      marketplaces.

1           I think we've shared a lot of details on the  
2           specifics of this production capacity that's coming  
3           onstream today and coming onstream in an environment  
4           where we've seen an absolute market collapse. We  
5           shared with you some specific data from our Q-4, from  
6           the fourth quarter in our business, that will show you  
7           a very dramatic dropoff in demand to the point that  
8           all of our production assets in Q-4 were idled for a  
9           significant portion of the quarter.

10           If you look toward the next quarter the  
11           situation is not improving. It's actually getting  
12           worse. We'll share with you in our posthearing briefs  
13           details about our operation, our production facilities  
14           in the U.S. and the status of demand.

15           I thought it would be relevant to talk a  
16           little bit about some specific applications for our  
17           chemistry perhaps to help you relate to why demand is  
18           so weak for our products. Several applications we've  
19           listed in our brief as critical to our business.  
20           Principally our chemistry is used in applications that  
21           are related to adhesive compounding, emulsion  
22           polymerization, textiles, paper. Let me give you some  
23           examples of those.

24           Probably the largest market space for us  
25           certainly in the U.S. and one we depend most heavily

1 on is the adhesive space. Our chemistry is used in a  
2 host of applications. If you were to lay tile on a  
3 floor today you would use a PVA-based adhesive to glue  
4 those tiles down. A manufacturer of furniture like  
5 this where you have a lamination that's glued down on  
6 top of a wooden structure uses PVA in those  
7 applications.

8 If you were to have your house recarpeted  
9 and buy a roll of carpet that was wound on a tube  
10 core, that cardboard tube core is glued together using  
11 PVA. Tape joint compounds is a significant  
12 application, so if you were to hang drywall in a new  
13 home construction PVA is used to fill the gaps between  
14 the drywall boards.

15 This application we call emulsion  
16 polymerization is paint. So go buy a can of paint at  
17 a home improvement store, and it contains a  
18 significant amount of our product.

19 You'll notice a trend here. It's hard to  
20 open a newspaper today without seeing a new article on  
21 how bad the housing market is. We've certainly  
22 suffered significantly as a consequence of the  
23 downturn in housing. It's applications like this that  
24 make up the majority of our sales into the U.S. and  
25 that are critical to the long-term viability of our

1 business.

2           There are those in this room who have made  
3 the claim that PVA produced in subject countries is  
4 not a good substitute in these applications for our  
5 PVA; that they require some sort of significant levels  
6 of qualification or approval. This is absurd. These  
7 are commodity applications. They make up the vast  
8 majority of our sales into the U.S.

9           In fact, I think you'd be hard pressed to  
10 find a single customer of mine in these application  
11 spaces who has not at one point or another in the past  
12 consumed PVA from subject countries and who would be  
13 happy to do so again if the price was right.

14           I want to take a brief moment and draw for  
15 you an illustration on our process, the PVA process,  
16 and I think it will be relevant for a couple of points  
17 here. I'm not a chemist.

18           CHAIRMAN ARANOFF: Okay. You need to be  
19 speaking into a microphone because our court reporter  
20 cannot take a transcript any other way.

21           MR. PURVIS: Will this be okay?

22           CHAIRMAN ARANOFF: Yes. Sorry about that.  
23 I guess if we had known you were going to move around  
24 the room we actually have a mobile microphone, but we  
25 don't have it here right now.

1                   You also may want to pull the easel a little  
2 bit further toward the table because several of us  
3 can't see it from the dais.

4                   MR. PURVIS: How's that?

5                   CHAIRMAN ARANOFF: Well, it's better.  
6 Commissioner Williamson and Commissioner Pinkert, can  
7 you see that? Yes?

8                   MALE VOICE: As long as you stay on the top  
9 part.

10                  CHAIRMAN ARANOFF: Okay.

11                  MR. PURVIS: Okay. I'll stay on the top  
12 part. This is good.

13                  So let me walk you through briefly the  
14 process of our chemistry. We take a product -- I'll  
15 use acronyms. We take a product called acetic acid.  
16 Celanese is the largest global producer of acetic  
17 acid. If you add water to this, this is vinegar.  
18 This is the same vinegar you find in your kitchen.

19                  We take that acetic acid into a product,  
20 manufacture a product called vinyl acetate monomer.  
21 Maybe not an exact proxy, but think of this as Elmer's  
22 glue -- sticky, thick. From vinyl acetate monomer we  
23 then manufacture PVA. Everything in blue here is  
24 something that Celanese produces.

25                  I want to walk you through the steps in the

1 manufacturing chain. As we manufacture acetic acid we  
2 take enormous amounts of natural gas and methanol as  
3 inputs. What's in blue Celanese manufactures. What's  
4 in red we buy. Both methanol and natural gas are  
5 obviously heavily tied to the energy complex to crude  
6 oil. We then take this acetic acid, and we add  
7 ethylene, another crude oil derivative, to make vinyl  
8 acetate and then our next step to PVA.

9 A couple of points we want to make here.  
10 First of all, this is an energy intensive business,  
11 and our cost structure, our variable cost structure,  
12 is heavily tied to the energy complex so when we saw  
13 crude oil rise to \$147 a barrel last year our prices  
14 have to follow that or we're dramatically under water.

15 The second point I want to make here, and I  
16 think it was detailed to some degree in your report,  
17 is that as a function of the transformation of vinyl  
18 acetate into PVA we produce an enormous byproduct  
19 stream of acetic acid.

20 About 90 percent of the contained acetic  
21 acid that comes into the vinyl acetate molecule is  
22 recycled. It's a carrier, so it's a continuous loop.  
23 The net impact is we consume very little acetic acid  
24 in this process.

25 I raise this point. There's been a lot of

1 talk about the force majeure that Celanese had in  
2 2007, the manufacturing issues that we had. Our  
3 manufacturing issues had nothing to do with PVA. Our  
4 PVA production facilities have no history of ever  
5 declaring a force majeure because of complications  
6 with our own production plants.

7 What Celanese had was a force majeure in our  
8 acetic acid chemistry. It's important to note that  
9 this acetic acid production unit that declared force  
10 majeure represents about 10 percent of global  
11 production capacity. This was an industry issue that  
12 happened at a point in time in the economic cycle  
13 where the industry was completely sold out.

14 The recycle nature of our acetic acid  
15 chemistry allows these businesses, our VAM and our PVA  
16 business, to stand alone, to be self-contained without  
17 the need for a dramatic makeup of acetic acid from the  
18 marketplace.

19 When you look at our data and how we  
20 supplied the domestic market during our force majeure  
21 period, you will see a very minimal impact to the  
22 domestic marketplace because of our force majeure  
23 situation due to our ability to recycle.

24 The third point I want to make here, and  
25 it's relevant in a number of places. Our PVA assets

1 are fixed cost intensive. They're very complex  
2 processes. They're very expensive to build. They  
3 have multiple steps in the process. They're difficult  
4 to run and require a lot of people.

5 On a dollars per ton of capacity basis our  
6 PVA chemistry is probably six to eight times more  
7 fixed cost intensive than anything else that we've  
8 produced. The implication is we have to run these  
9 assets hard to cover our fixed costs. These assets  
10 are not profitable running at reduced production  
11 rates.

12 In preparation for these hearings we were  
13 asked to describe a sequence of events that would  
14 likely occur if these orders were lifted, and it's not  
15 necessary that we speculate because we're experiencing  
16 it real time.

17 A significant amount of our sales today take  
18 place in the export market. Latin America is a good  
19 example, a good proxy for the U.S., where we have many  
20 multinational customers who produce the same products  
21 that we produce in the U.S., who buy the same grades  
22 of PVA.

23 In the last 60 days, we have seen a dramatic  
24 surge in availability of imported PVA from subject  
25 countries into Latin America. These are the same

1 sorts of end uses that we depend on in the U.S.  
2 market. We're being forced to dramatically reduce our  
3 selling prices to maintain a market share.

4 Ultimately if our prices fall much further  
5 and reach a level where we can't cover fixed costs  
6 we'll have to back out of that market. Frankly, I  
7 can't see a reason why the situation would be any  
8 different in the U.S. if these orders were lifted.

9 I want to close by drawing an analogy to the  
10 automotive industry. It's a market space in industry  
11 that all of us are tied to in a significant way and  
12 one that's received a lot of press here in Washington  
13 lately.

14 Capacity to produce automobiles in the U.S.  
15 is roughly 16 to 17 million units. Up through the  
16 first half of 2008, sales demand in the U.S. matched  
17 roughly this capacity. Obviously we've seen a  
18 dramatic turndown in demand for automobiles. I think  
19 the best minds in the industry would argue that going  
20 forward demand is maybe 11 or 12 million units.  
21 You're talking about a 30 to 40 percent decrease.

22 These industries, this automotive industry,  
23 is capital intensive, fixed cost intensive, just like  
24 ours. These guys are going to be required to take  
25 capacity out in order to stay viable. You guys see

1 that in the press today.

2 Our industry is no different. We will see  
3 in this global economic environment PVA capacity shut  
4 down as the industry right sizes its capacity to match  
5 demand. Obviously we don't want it to be our assets  
6 that are shut down.

7 Thank you.

8 MS. KORTE: Good morning, Commission. My  
9 name is Laura Korte. I've been with the DuPont  
10 company almost 25 years, and of that 25 years 19 of  
11 them have been with the vinyls industry, specifically  
12 PVA and our VAM businesses.

13 Because of the length of time that I've been  
14 in this business in roles such as manufacturing, sales  
15 and most recently as its business manager, the  
16 performance of this industry is very personal to me,  
17 and I represent not only my business, but also the  
18 workers at our LaPorte plant who are both friends and  
19 have been colleagues for almost 20 years.

20 DuPont produces PVA at our plant in LaPorte,  
21 Texas. Unlike Celanese, our PVA production is limited  
22 to fully hydrolyzed grades, and without significant  
23 capital investment we're constrained from producing  
24 the full product line that Celanese produces.

25 We serve the USA PVA merchant market, export

1 markets, and we also consume PVA internally for  
2 production of PVB. Like Celanese, we strongly support  
3 continuation of these orders on PVA imports from  
4 China, Japan and Korea.

5 Lou has already discussed some of the issues  
6 that concern our industry and so I'd like to focus on  
7 just the current U.S. and global market conditions,  
8 both present and in the past, that would lead the  
9 subject producers to continue dumping significant  
10 volumes of PVA in the industry.

11 First I'd like to amplify Lou's comments on  
12 the poor state of the PVA market. We do not see that  
13 improving in the foreseeable future. In the fourth  
14 quarter of 2008, it was as if a light switch had gone  
15 off. Orders didn't just decline. They just simply  
16 stopped, first in our VAM business in October and then  
17 spreading to our PVA business in November and  
18 December.

19 Demand dropped across the board, not limited  
20 to one region or market, but included our internal and  
21 external customers in all industries, including PVB.  
22 The change was not concentrated to just one industry.  
23 Customers that only a month before had been asking for  
24 more product than we could ship were now canceling  
25 orders that had been on our books.

1           In response, we simply had no choice but to  
2 curtail our operations in the fourth quarter, and this  
3 is after we had worked hard to start up our units  
4 quickly after our hurricane impact from Hurricane Ike.

5           In past years we've had to cut our  
6 production back and our rates back for a week or two  
7 to meet a year-end inventory goal, but never to the  
8 extent that we had to do in 2008. We shut our  
9 operations down in early December and only recently  
10 started them back up last weekend.

11           Even though we took those bold actions to  
12 shut down our plants, I'll admit to the Commission  
13 today that we didn't act quickly enough and we ended  
14 2008 with large amounts of inventory, negatively  
15 impacting the cashflow of our business.

16           As Lou covered in his testimony, these  
17 plants are capital intensive and ideally should be run  
18 at or near full capacity utilization, but we can't do  
19 that when there are no orders to fill.

20           While we all hoped that during the fourth  
21 quarter that what we were seeing was just an inventory  
22 destocking on the part of our customers and that  
23 orders were going to pick up in January, we have yet  
24 to see demand rebound. Orders in January are anemic.  
25 In fact, we still have significant inventories for

1 some customers and are adjusting our current  
2 production schedules accordingly.

3 Just as an example, at year end we had over  
4 a million pound of inventory waiting for Solutia to  
5 consume at their site in Springfield with additional  
6 volume in Texas waiting to ship to them. From the  
7 rate that orders are coming in currently, it appears  
8 that that material, as well as material for our other  
9 customers, will remain in DuPont's inventory for some  
10 time.

11 The last few years in the PVA market have  
12 been quite the wild ride as the market has been  
13 impacted by increasing global demand, the higher  
14 energy prices that Lou talked about and raw material  
15 costs and higher freight costs in all of our  
16 transportation modes.

17 These factors resulted in tighter supply/  
18 demand balances in the industry in 2007 and into the  
19 first half of 2008, but that was a short period of  
20 tightness in the last five to 10 years that I can  
21 assure the Commission was an anomaly and not what we  
22 should judge the health of this industry on.

23 This tighter market came crashing to an end  
24 in the fourth quarter. DuPont and Celanese were not  
25 the only PVA producers that curtailed production in

1 the fourth quarter as there are widespread industry  
2 reports of numerous plants globally shutting down.

3 Shutting down capacity, however, is a  
4 short-term fix and does not address the issue of the  
5 overall health of the domestic industry. It is at  
6 best a stop-gap measure to give us time to assess  
7 overall market conditions.

8 While the higher energy prices that plagued  
9 our industry and increased our costs last year have  
10 dropped in the fourth quarter and into 2009, I can  
11 assure you that has not resulted in a windfall for our  
12 PVA business. The rapid declines in energy resulted  
13 from an overall lack of demand, not an increase in  
14 supply of energy. That decline in demand extends to  
15 our PVA markets and customers.

16 In addition, these rapid declines in energy  
17 prices have caused our customers to demand  
18 corresponding price decreases. Those demands for  
19 price decreases started quickly in October and  
20 November and continue today almost daily.

21 We have been holding off these demands as  
22 long as possible. As a rule it takes much longer for  
23 a producer to raise prices than to bring them down as  
24 customers that are demanding the rapid price decreases  
25 are also the ones that resist price increases when

1 prices are moving up.

2 We've been addressing pricing in a  
3 disciplined manner to try and maintain the margins  
4 that we can on this lower volume of sales. If the  
5 orders were to be lifted, subject imports would be  
6 free to re-enter the market, and their entry to our  
7 customer base would be through offers of lower price.

8 Just as we saw in 2001 when the original  
9 orders from the 1996 orders were sunsetted, subject  
10 imports were offered to our customers at rapidly  
11 declining prices as the subject producers came in and  
12 offered prices that were 25 to 30 percent lower than  
13 current price in the domestic industry.

14 Those producers have not gained a pound of  
15 business as both DuPont and Celanese chose to meet  
16 those competitive offers and maintain some volume of  
17 sales to our customers. But the damage that was done  
18 in 2001 and 2002 was there as our prices declined  
19 while costs were also rising during that time, so it  
20 doesn't take anything more than a few pounds of  
21 imports to crater the price in the domestic industry.

22 As you can see in our data, it take years to  
23 recover the pricing as we were trying to raise price  
24 in a disciplined manner that would not negatively  
25 impact our customer base.

1           We've also seen recently customers changing  
2           their purchasing behavior, willing to buy on a spot  
3           basis versus contract as they have seen the industry  
4           shift from a more balanced supply/demand position to a  
5           situation where supply is much longer than demand.  
6           They're asking not just for price concessions, but  
7           also increases in terms and conditions of sale such as  
8           payment terms as all of our customers, as well as  
9           DuPont and Celanese, try to manage cash.

10           Just as an example, last week one of our  
11           adhesive customers called DuPont to ask us to waive  
12           what we would call a less than truckload upcharge.  
13           The customer could only afford to buy 30,000 pounds  
14           instead of a typical 42,000 pound shipment. They were  
15           asking for our help. They couldn't afford to buy  
16           anything more than they needed for their order.

17           To maintain this customer and to get the  
18           sale, we did meet that customer's request and give the  
19           concession on the pricing, eating more freight for  
20           shipping a smaller volume. This is a business where  
21           pennies matter not only to the producers such as  
22           DuPont and Celanese, but also to our customers, and  
23           we're trying hard to be fair and maintain the balance  
24           between the two.

25           It's always hard to predict the future, and

1 that's never more true than today. DuPont believes  
2 that overall demand for PVA in the United States will  
3 continue to decline short-term as a result of this  
4 economic crisis globally and the overall downturn that  
5 Lou talked about, especially in the housing and  
6 construction industry that serves so much of our  
7 downstream products.

8 The extent and length of this decline is not  
9 known at this time. We have yet to see demand  
10 respond. Traditional industries and applications for  
11 PVA such as textiles and adhesives in the housing  
12 market have not recovered, and while we agree with  
13 Solutia that the future for new applications such as a  
14 photovoltaic application for PVB will eventually grow  
15 demand for PVA, DuPont doesn't see that in our  
16 immediate one to two year future.

17 In fact, our predictions for PVB growth,  
18 including the impact of photovoltaics for 2009, is  
19 that our overall demand for PVB will be down versus  
20 2008 and when it does recover will recover at growth  
21 rates half of what we had originally predicted just  
22 six months ago.

23 Five years ago in the original investigation  
24 of this order my predecessor, Catherine McCord,  
25 testified that it was DuPont's intent then to serve

1 first and foremost the U.S. domestic industry, and  
2 that's true today. We would much rather serve our  
3 domestic customer base where we have lower freight  
4 costs, a leaner and shorter supply chain and a shorter  
5 cashflow cycle time than our export markets.

6 We've been forced to export more over the  
7 last five years to augment our U.S. sales and to keep  
8 our capacity fully utilized. Falling demand globally,  
9 however, in the recent months has already begun to  
10 affect this volume as our export customers have chosen  
11 to buy smaller quantities from local stocks rather  
12 than import from DuPont.

13 If we cannot export and our domestic sales  
14 are impacted by a flood of subject imports if these  
15 orders were to be lifted, then we would be forced to  
16 reassess running our plant, as well as our place in  
17 the PVA industry.

18 Solutia's contention in their prehearing  
19 brief that our exports offset any impact of an  
20 increase in imports into the U.S. is simply not true.  
21 Exports are a necessity of our business, but they are  
22 not our desired route to market.

23 When I think about what will happen in the  
24 future, I look back at what the past behavior of the  
25 subject producers has been. This industry has been

1 under attack from subject imports since the mid 1990s  
2 when Air Products filed the original petition seeking  
3 relief from unfairly traded imports. The imposition  
4 of that order in 1996 specifically against Japan  
5 resulted in a decrease in the volume of exports. The  
6 case was sunsetted in 2001.

7 At the time, Air Products' vinyls business  
8 was being acquired by Celanese, and less than a year  
9 later DuPont and Celanese had to file another petition  
10 as increased volume of imports following that sunset  
11 order and declining prices resulted in price  
12 depression in all of our accounts at a time when  
13 demand in the U.S. industry was shrinking and the U.S.  
14 was in a very minor recession in the fall of 2001 and  
15 into early 2002.

16 We sit here now five to six years later in  
17 the midst of a global recession and a globally  
18 contracting market. Volatility in the energy markets,  
19 declining demand and tight credit, compounded by the  
20 excess capacity that has been put on line worldwide,  
21 have resulted in an untenable situation for the  
22 domestic industry.

23 If these orders are lifted, subject  
24 producers will again be free to re-enter the U.S. at a  
25 time when the industry is most vulnerable and do the

1 same things they did to us five years ago.

2           Since these antidumping orders were imposed  
3 in 2003, Chinese producers have greatly expanded their  
4 production capacity, increasing by almost 33 percent  
5 between 2003 and 2007. Japanese and Korean producers  
6 have increased their capacities as well. These  
7 capacity expansions were driven by overall higher  
8 global demand as the globe had increasing economy.

9           In the last several years, Chinese PVA has  
10 had increased demand in its domestic market for  
11 production of things like textiles. Japanese  
12 producers have also targeted a larger share of their  
13 production to the two applications such as PVA film  
14 for LCD screens.

15           But both of these applications are  
16 ultimately targeted at a consumer, and you can only  
17 look at the reports from retailers in the fourth  
18 quarter, as we had an anemic holiday season for  
19 shopping, to understand the consumer simply isn't  
20 buying.

21           If the Chinese producers of textiles cannot  
22 export their wares and people aren't buying LCD  
23 screens, the PVA that ultimately goes into those  
24 industries will need to find a place to go, and that  
25 will be into the U.S. market.

1 Chinese producers and Japanese producers  
2 have the same capital intensity that the domestic  
3 industry has, and they must run their plants as well.  
4 We have no doubt that the U.S. market will be an  
5 attractive market for this production, particularly  
6 given the pricing differentials in different country  
7 markets.

8 In general, from 2003 to the fall of 2008  
9 price gaps in the U.S. and non U.S. markets has  
10 narrowed over the years, but the U.S. still remains  
11 the highest priced market. As we've seen in the last  
12 few months, Asian prices have fallen further and  
13 faster than U.S. prices are currently doing.

14 Despite the rise in the Asian pricing over  
15 the 2003 to 2008 period, they were still substantially  
16 lower than U.S. average market prices, and absent any  
17 antidumping duties an Asian producer could still net  
18 more revenue and margin by selling in the U.S. than  
19 they can in their home market, even accounting for  
20 ocean freight and average import duties.

21 The end result of this additional capacity  
22 in Asia would be a surge in subject imports that  
23 DuPont would struggle to withstand. The condition of  
24 our PVA business is at best precarious, and opening  
25 the door to increased volume of low-priced imports

1 would be the final blow to our industry.

2           While we have not met our financial goals,  
3 without the orders our results would have been far  
4 worse. These orders over the last few years have  
5 allowed us to maintain our share of the U.S. PVA  
6 market amidst declining demand, and by reducing  
7 unfairly priced imports the orders enabled us to  
8 partially offset sharp increases in raw materials,  
9 energy and freight costs as we worked over the last  
10 five years to slowly raise prices in the U.S. market  
11 and capture the value for our product.

12           Prior to the imposition of the orders in  
13 2003, imports from China, Japan and Korea were  
14 targeting sales in the U.S. to customers in the  
15 adhesives, textiles and paper market segments, three  
16 industries that traditionally have been large users of  
17 PVA.

18           Their low-priced imports were forcing DuPont  
19 to lower our prices to meet competition and maintain  
20 our sales and production volumes. After the orders  
21 were imposed, DuPont was able to maintain its relative  
22 share in these segments. This was especially  
23 important in the textile sector where our ability to  
24 maintain our share of a shrinking market has been  
25 critical to our operations.

1           Since 2003, you've all seen reports that the  
2 textile industry has suffered in the U.S. through huge  
3 declines in its manufacturing as major suppliers such  
4 as Dan River, West Point Stevens or Springs either  
5 declared bankruptcy, were sold or relocated offshore.

6           If DuPont had to compete with imports from  
7 China, Japan and Korea absent an antidumping order  
8 during this time of declining market base, the impact  
9 to our sales would have been even more severe.

10           Similar declines in the U.S. automotive  
11 market have occurred over the last five years, as Lou  
12 just recently discussed, and the automotive industry  
13 not only pulls in sales for PVB for windscreens, but  
14 also for other things such as textiles and adhesives  
15 that go into the manufacture of a car. More recently  
16 in 2008, the downturn in the construction and housing  
17 industry has impacted many of our customers in the  
18 applications that Lou discussed.

19           All of these factors of market demand and  
20 increasing supply of subject imports will again make  
21 the U.S. market attractive to importers wanting to  
22 bring their low-priced imports into the U.S. market.

23           For DuPont, this will mean further downward  
24 pressure on pricing for our products, lower profit  
25 margins and could result in lower production in U.S.

1 shipments of PVA. There is a significant risk that we  
2 would again be forced to curtail or idle production  
3 and to reduce production-related workers in PVA  
4 manufacturing and packaging.

5 Over the last few years we have taken  
6 whatever steps we could to reduce our expenses and  
7 improve our profitability without impacting our  
8 operations and curtailing our production. In  
9 manufacturing we have focused on improving our energy  
10 efficiency between our two plants.

11 We have also restructured our selling,  
12 technical service and business staff three times in  
13 the last five years as we continue to try to support  
14 this industry with less resources, and our most recent  
15 restructuring occurred just a week ago as we further  
16 cut our sales and technical service staff.

17 We can't save our way to financial health.  
18 If the performance of this industry continues to  
19 decline, we will be forced to consider more drastic  
20 and permanent options. Therefore, DuPont asks the  
21 Commission to continue the orders against the subject  
22 producers.

23 Thank you.

24 MR. GREENWALD: Chairman Aranoff, with your  
25 indulgence what I'd like to do is defer any more

1 speaking by the lawyers. You will have questions, no  
2 doubt, about Bratsk, about cumulation, captive  
3 production.

4 For us it's more important to save time for  
5 rebuttal and for the in camera session, so with that  
6 I'd like to close our affirmative presentation.

7 CHAIRMAN ARANOFF: Well, thank you and  
8 welcome again to all the witnesses. We appreciate  
9 your taking the time away from your businesses to be  
10 here with us.

11 As Mr. Greenwald has said, we really  
12 appreciate the opportunity to hear from people who are  
13 directly involved in the business and can give us  
14 their perspective. We find these days long, but  
15 extremely helpful in resolving these cases.

16 We're going to begin the questioning this  
17 morning with Commissioner Williamson.

18 COMMISSIONER WILLIAMSON: Thank you, Madam  
19 Chairman. I, too, want to express my appreciation to  
20 the witnesses for their testimony.

21 Let's begin with a request for posthearing.  
22 Could you please submit a copy of the document that is  
23 the subject of your October 31, 2008, filing  
24 responding to the Director of the Office of  
25 Investigations' request?

1           If you need further clarification on that we  
2           can do it posthearing, but --

3           MR. GREENWALD: The answer is short. We  
4           will submit whatever you want submitted.

5           COMMISSIONER WILLIAMSON: I wanted to get  
6           that out of the way. Thank you.

7           You made some allusions to the fact that  
8           your price increases after the orders first went in  
9           effect was kind of gradual, and I was really wondering  
10          why you weren't able to obtain say more significant  
11          increases after the orders were imposed.

12          MR. PURVIS: Yes. As we said, Mr.  
13          Williamson, clearly there is a concern for the  
14          industry -- for the domestic customer base, consumer  
15          base -- that we drive a change in pricing in the  
16          market at a rate that they could accept.

17          You also have to understand that there are  
18          contracting cycles, right? It's not an instantaneous  
19          occurrence that at any point in time we can just go  
20          out and make dramatic changes. You have to work  
21          through.

22          You know, typically 70 or 80 percent of our  
23          customers are under long-term contracts. You have to  
24          work through expiration periods that allow more  
25          flexibility to change pricing structures, pricing

1 mechanisms.

2 Does that answer your question?

3 COMMISSIONER WILLIAMSON: In part. In that  
4 period, how long were the typical contracts? Was  
5 there any kind of standard length?

6 MR. PURVIS: Yes. Typically one to three  
7 years is a typical length. We see them run longer.

8 I think what our data says is roughly 70  
9 percent of our customers in the U.S. are contracted  
10 for longer than a one-year period of time.

11 COMMISSIONER WILLIAMSON: Now, has that  
12 trend changed? I got some indication that maybe  
13 people are going more to spot prices.

14 Is that just because of the financial  
15 crisis, or is that sort of an industry shift?

16 MR. PURVIS: Do you want to respond to that?

17 MS. KORTE: Commissioner Williamson, in our  
18 business we have seen a shift toward more spot  
19 purchases and customers unwilling to commit,  
20 especially in the last few years as prices have been  
21 rising a bit more dramatically.

22 DuPont, for example, implemented five price  
23 increases in 2007 and three to four in 2008. Our  
24 customers have been willing to only commit for about  
25 six months or so and so we've gone through either

1 shorter term contracts of a year or simply a pricing  
2 agreement for a period of time that may or may not be  
3 documented in a formal contract.

4 So I've seen that trend in our business, and  
5 Lou can speak to Celanese.

6 MR. PURVIS: I agree. I think it's a near  
7 term trend.

8 Certainly any smart buyer in any marketplace  
9 when they see a market going along with dramatic  
10 overcapacity available, they don't want to have  
11 long-term commitments of any form. So I think it's a  
12 trend we've seen more so really in the last one or two  
13 quarters at Celanese.

14 COMMISSIONER WILLIAMSON: To what extent  
15 were the more rapid price increases say in '07 and '08  
16 driven by energy costs, increases in energy prices?

17 MS. KORTE: Certainly the bulk of our price  
18 increases over the last two years were driven both by  
19 higher energy costs as we were forced to try to  
20 recover margins and pass on those cost increases to  
21 our customers, as well as the tightness in the supply/  
22 demand balance in the market.

23 The other thing that drove the rather slower  
24 implementation of price increases in the 2003 to 2006  
25 period at least from DuPont's perspective was that

1 supply to demand was relatively loose even in the U.S.  
2 market, so there was still just not a lot of incentive  
3 or we could not push a lot of price increases onto our  
4 customers.

5 There was certainly ample supply in the U.S.  
6 market both from the domestic industry, as well as  
7 imports that were continuing to come in not only from  
8 subject producers despite the orders, but other  
9 countries such as Singapore, Germany, that were not  
10 subject to the orders.

11 COMMISSIONER WILLIAMSON: In looking at raw  
12 material costs, do PVA producers impose surcharges or  
13 other fees to account for the rise in raw material  
14 costs?

15 MR. PURVIS: For Celanese, particularly over  
16 the last two years we've seen a dramatic run-up in our  
17 raw material cost structure. We just announced price  
18 increases directly to the market to try to cover that.

19 It's not uncommon in our business to add a  
20 freight surcharge so that there's a freight component  
21 to our cost to deliver PVA. As we see the price of  
22 diesel rise to \$4 or \$5 a gallon and we incur  
23 increased costs from our freight carriers, we  
24 certainly try to pass that on, so there is from time  
25 to time a surcharge imposed specifically on the

1 freight component.

2 Does that answer your question?

3 COMMISSIONER WILLIAMSON: But not on the  
4 energy component?

5 MR. PURVIS: Typically from Celanese's  
6 perspective we would try to pass that through directly  
7 in the form of a price increase, not calling it a  
8 surcharge per se.

9 COMMISSIONER WILLIAMSON: How much of a lag  
10 in the timing between say you adjust your prices in  
11 response to falling and rising raw material costs?  
12 This has been a factor in some other cases we've  
13 looked at.

14 MR. PURVIS: I'm sorry. The question is how  
15 much of a lag between the time we see raw materials go  
16 up and the time we can increase prices?

17 COMMISSIONER WILLIAMSON: Say oil prices  
18 jump 10 percent in January.

19 MR. PURVIS: Yes.

20 COMMISSIONER WILLIAMSON: How much after  
21 that? How many months or weeks after that might you  
22 adjust your prices?

23 MR. PURVIS: Typically prices are settled on  
24 a quarterly basis in the U.S. industry, and if we  
25 intend to raise prices or desire to raise prices we'll

1 typically make an announcement 30 days before the turn  
2 of the quarter. So generically speaking, 60 to 90  
3 days.

4 We can announce all the price increases we  
5 want. We still have to negotiate in good faith to  
6 achieve those. Just a simple announcement of our  
7 intent is not success, but typically 60 to 90 days.

8 COMMISSIONER WILLIAMSON: I don't know to  
9 what extent you can address this here, but are you  
10 able to hedge on say energy supplies the way some  
11 airlines have done? I don't know if that's something  
12 you can address now or later.

13 MR. PURVIS: Yes.

14 MR. GREENWALD: Let them both answer that in  
15 their -- I mean, we'll put it in the posthearing  
16 submission.

17 COMMISSIONER WILLIAMSON: Okay.

18 MR. GREENWALD: I don't think it's right to  
19 have --

20 COMMISSIONER WILLIAMSON: Okay.

21 MR. GREENWALD: -- each of them talk about  
22 what they're doing.

23 COMMISSIONER WILLIAMSON: Okay. Thank you.  
24 Okay.

25 Turning to the question of exports from

1 China, your brief cites significant expansion of the  
2 Chinese PVA industry since 2003. However, only one  
3 Chinese producer has exported meaningful quantities of  
4 PVA to the U.S. since 2000.

5 Do you claim that other Chinese producers  
6 will commence significant exports to the United States  
7 in the event of revocation of the orders?

8 MR. GREENWALD: The answer is unequivocally  
9 yes. The one producer you have in mind is subject to  
10 the discipline of an antidumping order, but I also  
11 believe has a fairly favorable rate under it.

12 I think that the proof is in the extent to  
13 which the order has effectively precluded other  
14 Chinese supply from the U.S. market.

15 COMMISSIONER WILLIAMSON: I mean, is this a  
16 case where the other suppliers weren't interested  
17 before?

18 MR. GREENWALD: I believe, and if I'm wrong  
19 or if it needs to be expanded upon we'll do so in the  
20 postconference brief, but I believe that the rate,  
21 that rate that applies to all those producers, is very  
22 significant.

23 MR. MELTZER: May I jump in here? In the  
24 prior case or in the original investigation there were  
25 many other Chinese producers selling here and

1 attempting to sell here, and then when the order was  
2 put into place that ceased except for the one producer  
3 which has now a de minimis rate.

4 COMMISSIONER WILLIAMSON: Okay. Is there  
5 anything from other markets that we could look to in  
6 terms of the Chinese export pattern that might add  
7 further clarification on this point?

8 MR. GREENWALD: Yes, and I would urge you to  
9 do so.

10 The comparisons that I want to use are  
11 confidential so it's an issue that we would get into  
12 in the confidential portion of the hearing, but your  
13 staff report does contain unit value data, average  
14 unit value data by year for exports from each of the  
15 subject countries to third countries, and I would urge  
16 you to look at that carefully.

17 COMMISSIONER WILLIAMSON: Okay. And I was  
18 also thinking about in terms of other Chinese  
19 producers who have not exported to the United States  
20 and how they've behaved in other markets.

21 MR. GREENWALD: Well, what you will see in  
22 terms of behavior in other markets is average unit  
23 values -- you have for China, for example, a chart in  
24 the staff report that will have an average unit value  
25 of Chinese shipments to various markets, including the

1 United States.

2 COMMISSIONER WILLIAMSON: Thank you for  
3 that. Thank you for the answers to those questions.

4 CHAIRMAN ARANOFF: Commissioner Pinkert?

5 COMMISSIONER PINKERT: Thank you, Madam  
6 Chairman. I see that my red light is on. There we  
7 go.

8 Going back to Ms. Korte's testimony, and  
9 this may be more of a question for posthearing, but I  
10 want to give you an opportunity to comment on it.

11 You said that Asian prices have fallen  
12 further and faster under the conditions of recession  
13 than prices here, and I'm wondering if you can give me  
14 some explanation for why that would be the case.

15 MS. KORTE: We'll expand more on that in the  
16 posthearing brief. However, I will say briefly the  
17 majority of the world's production is in Asia and so  
18 there is certainly a faster supply chain there.

19 Just to give you one example, whereas the  
20 prices in Pakistan in the textile industry were a few  
21 months ago \$2,900 per metric ton, I recently received  
22 a report that Chinese PVA is being offered in Pakistan  
23 to our customers at \$1,800 per metric ton, which is a  
24 dramatic price decrease and a much lower level than  
25 U.S. prices.

1 MR. GREENWALD: Commissioner Pinkert, I  
2 think you raise a key point.

3 Part of the answer obviously is with so much  
4 Asian supply located in China, Japan and Korea the  
5 effect of the orders provides a significant wall  
6 against some of the lower priced imports from these  
7 countries that are free to go to other Asian markets,  
8 so in part it is a function of the orders.

9 COMMISSIONER PINKERT: Now, as you know,  
10 Solutia argues that price competition between subject  
11 imports and domestic PVA is limited by certain factors  
12 like quality and product mix, end use and purchasers'  
13 qualification requirements.

14 How do you respond to the attenuated  
15 competition argument?

16 MR. PURVIS: Simply not true. I can't say  
17 it any more simple than that. There's certainly some  
18 quality differences. There are quality requirements  
19 of any PVB producer which are more exacting than the  
20 bulk of the industry.

21 We're dependent on much more than just sales  
22 to the PVB market in the U.S. to be viable, and the  
23 vast majority of our sales go to other market spaces,  
24 as we've outlined for you. The vast majority of our  
25 customers have purchased PVA from subject producers in

1 the past and would do so again given the opportunity.

2 The notion that an adhesive compound or an  
3 emulsion polymerizer in the U.S. would have to go  
4 through some lengthy process to qualify a subject  
5 import because the quality is substantially different  
6 is absolute nonsense.

7 MR. GREENWALD: Commissioner Pinkert, one of  
8 the points that I think we have to constantly bear in  
9 mind is that the opposition to continuation of the  
10 order comes from Solutia that is focused on a minor  
11 part of the overall market.

12 So what you are hearing in testimony against  
13 continuing the order is an analysis that is based on a  
14 subset of the overall market, but even with regard to  
15 PVB or the use of PVA for PVB purposes, the question I  
16 would like the Commission to ask is if the orders are  
17 inconsequential, if they have no impact on prices and  
18 qualification or whatever are effective bars to  
19 competition, what on earth is Solutia doing here?

20 COMMISSIONER PINKERT: Now, my next question  
21 is probably one that we'll get into in greater detail  
22 in the in camera session, but again I wanted to give  
23 the company witnesses an opportunity to comment on  
24 this.

25 To the extent that you can in the public

1 session, can you explain the trends in individual  
2 company profitability during the period of review for  
3 the domestic producers?

4 MR. GREENWALD: That is a fair question. It  
5 is grounded in data which I know in the whole and  
6 which the company witnesses only know their own.

7 What we will do in the posthearing brief is  
8 give you a full explanation behind the data that you  
9 are looking at, but I don't think they can even begin  
10 to discuss their respective situations in a public  
11 forum.

12 COMMISSIONER PINKERT: Thank you. Now, you  
13 did mention Taiwan in your testimony earlier, Mr.  
14 Greenwald, and what I'm wondering for purposes of this  
15 proceeding should we treat imports from Taiwan any  
16 differently from any other nonsubject imports?

17 MR. GREENWALD: Again, this is another area,  
18 because of the obvious differences of view on the  
19 impact between the two domestic producers that are  
20 here, I don't think it's appropriate for me to get  
21 into in any detail.

22 The answer to the question is that there is  
23 a separate proceeding going on; that whether or not  
24 you believe that the imports from Taiwan are injurious  
25 doesn't really impact the consequences of maintaining

1 these orders. Both companies would say that it would  
2 be catastrophic to lift these orders.

3 The question for you becomes, it seems to  
4 me, given the fact that there is another proceeding  
5 going on how do you look at those imports, as you put  
6 it, compared to all the other nonsubject imports.

7 What I would submit to you is you have to  
8 look at them differently. I would like to, again if  
9 you'll indulge me because of the obvious sensitivity  
10 of this issue, do it in the postconference brief.

11 COMMISSIONER PINKERT: Thank you. This  
12 brings to mind the issue that you alluded to again in  
13 your testimony about how to apply Bratsk in the  
14 context of this case. I'm particularly interested in  
15 the argument that I believe it was Solutia made about  
16 the opinion from the CIT in the NSK case.

17 I understand that your position is that this  
18 is not a commodity product for purposes of Bratsk, but  
19 I'm wondering if you could comment more specifically  
20 on what kind of analysis we should be doing here if we  
21 consider this to be a commodity product for the  
22 purpose of Bratsk.

23 MR. GREENWALD: There is a threshold  
24 question, it seems to me, given the decision of the  
25 Court of Appeals in the Federal Circuit in I believe

1 it's Mittal, as to whether or not Bratsk can apply in  
2 a sunset review, and the reason is that a sunset  
3 review is necessarily forward looking.

4 What Mittal stands for, as I read it, is the  
5 proposition that the Commission is not to engage in  
6 speculation going forward as to whether a reduction in  
7 subject imports will simply benefit nonsubject  
8 imports, et cetera, which is essentially speculative,  
9 but rather the rule instructs the Commission to look  
10 backwards. That is, as a historical proposition is it  
11 true that subject imports simply replace nonsubject  
12 imports.

13 So I have a question, and I think you should  
14 have a question, about the application of Bratsk to  
15 sunset reviews given what we believe to be the holding  
16 by the Federal Circuit in Mittal.

17 COMMISSIONER PINKERT: Thank you for that  
18 answer. Perhaps for the posthearing if you could  
19 explain what sort of analysis would apply in this case  
20 if the NSK opinion -- that is, the CIT opinion from  
21 Judge Barzilay -- is the law what sort of analysis we  
22 should do in this case.

23 MR. GREENWALD: We'll do that.

24 COMMISSIONER PINKERT: Thank you. Thank  
25 you, Madam Chairman.

1                   CHAIRMAN ARANOFF: In looking at the  
2 responses to the purchaser questionnaires that we  
3 have, we see a number of purchasers expressing concern  
4 about the reliability of supply from domestic PVA  
5 purchasers, and we know there have been some force  
6 majeure events over the past few years.

7                   Have the liability issues become  
8 demonstrably more serious during our period of review,  
9 or have they always been present to about the same  
10 degree?

11                   MS. KORTE: Speaking for DuPont, we've had  
12 one supply interruption that required us to declare a  
13 force majeure in the 19 to 20 years that I've been a  
14 part of this business, and that was when we took a  
15 direct hit from Hurricane Ike.

16                   Our plant was down for three weeks. We  
17 started back up and ran at full rates and lifted our  
18 force majeure on November 14. We declared it, you  
19 know, in late September.

20                   So in my opinion, you know, we have not  
21 gotten any demonstrably worse and in fact had excess  
22 production capacity available to supply our customers  
23 at the end of 2008 as demonstrated by the fact that we  
24 simply took our plant down and yet still had very high  
25 inventories.

1                   CHAIRMAN ARANOFF: Okay. Mr. Purvis?

2                   MR. PURVIS: Yes. I would agree with the  
3                   comments.

4                   We've seen, as I described a moment ago, one  
5                   significant issue in our value chain, not in our PVA  
6                   production, that has certainly caused difficulty for  
7                   our customers in 2007 to some extent.

8                   I think it's important to note, Madam  
9                   Chairman, that the U.S. industry is a dramatic net  
10                  exporter of PVA. There's no shortage of PVA or PVA  
11                  capacity in this country. In fact, I think we export  
12                  about three times as much volume as we import, so  
13                  there's no shortage of availability here.

14                  CHAIRMAN ARANOFF: Aside from the force  
15                  majeure incidents which you've explained and would  
16                  characterize as rare, I know in Solutia's brief they  
17                  mention a number of other shutdowns of varying  
18                  durations over time which were not force majeure  
19                  events.

20                  Do you have any comments on those in terms  
21                  of the ability of customers to get what they need when  
22                  they need it?

23                  MR. GREENWALD: We had an extensive back and  
24                  forth on that issue, and it's quite detailed,  
25                  especially with regard to Solutia.

1           Each company is prepared to provide a  
2 detailed exposition of their supply to Solutia, issues  
3 that have come up in the course of supplying Solutia  
4 and explain a situation which I believe, having heard  
5 the other side, has been mischaracterized grossly by  
6 Solutia.

7           CHAIRMAN ARANOFF: Okay. Well, that would  
8 be helpful to the extent you can put that in the  
9 posthearing.

10           I mean, there are other customers responding  
11 to the purchaser questionnaire who make those  
12 comments. You know, within the bounds of  
13 confidentiality it would be helpful to have responses  
14 to their claims as well.

15           MR. GREENWALD: We will do that customer by  
16 customer.

17           CHAIRMAN ARANOFF: Okay. Looking at  
18 operations of the domestic producers as a whole during  
19 the period under review, Solutia's argument is at  
20 least for the latter part of the period where these  
21 force majeure events were happening that the domestic  
22 industry was producing all the PVA that they could.  
23 So you would agree with that?

24           MR. GREENWALD: Yes. I think that is right.  
25 We don't quarrel with that. They were producing all

1 the PVA they could, and there was a benefit in doing  
2 so.

3 One of the reasons they were able to produce  
4 all the PVA they could and sell it at the prices they  
5 did was the impact of the orders.

6 CHAIRMAN ARANOFF: Okay. Obviously if they  
7 were producing all that they could, but we have  
8 capacity utilization numbers that show us that they  
9 were operating below capacity because of being unable  
10 to operate some portion of their operations, then we  
11 should be discounting those capacity utilization  
12 numbers?

13 MR. GREENWALD: Let me get into the  
14 specifics. I think that goes to the way in which --  
15 the difference between theoretical capacity and  
16 practical capacity, especially when you are  
17 constrained because of force majeure situations.

18 CHAIRMAN ARANOFF: Okay. Let me go back to  
19 a comment that you made earlier which leads into one  
20 of my questions, flipping over from the supply side to  
21 the demand side, which is we have purchasers arguing  
22 that there has been short supply in the U.S. market,  
23 and at the same time we see U.S. producers' exports  
24 growing. I'm trying to rectify those two situations.

25 MS. KORTE: Let me speak for our issues in

1 DuPont.

2           When we make a commitment to export  
3 material, it will be a certain volume for a certain  
4 amount of time, such as a quarter. You know, we honor  
5 those commitments. If we have orders on our books to  
6 supply a customer in India or Taiwan or China or in  
7 Europe, we simply can't cancel those orders.

8           It would not be within the spirit of our  
9 agreements to cancel those simply when a spot order  
10 would come in from our customers, so we treat our  
11 committed customers, including people that we've made  
12 a commitment to even for a quarter, and we try to  
13 treat them all fairly and equitably.

14           MR. GREENWALD: Commissioner Aranoff, I do  
15 think it's fair to say that when because of these --  
16 there were two large force majeure situations that  
17 occurred during the period of review, one for each  
18 company.

19           I do believe there is data showing an  
20 effort, a conscious effort to supply U.S. demand  
21 first.

22           MR. PURVIS: Let me add to that. Again,  
23 look at our data for supply to the domestic industry  
24 during our force majeure period.

25           What you will see is a demonstrable

1 commitment that we've made to our core customer base,  
2 to our contract customers, to our domestic customers,  
3 at the expense of participation in spot export markets  
4 during that time period.

5 The data shows that very clearly. Extremely  
6 minimal impact to our domestic customers during our  
7 period of force majeure and a very dramatic impact to  
8 -- we took the hit in the export markets and the spot  
9 markets.

10 MS. KORTE: And I'll also echo that. In the  
11 posthearing brief we can discuss our allocation  
12 percentages among various markets.

13 I think you'll see that we did, you know,  
14 treat the domestic industry within our equitable  
15 bounds as fairly as we could, but we changed the  
16 allocation percentages and we did take a hit in the  
17 export markets during our force majeure.

18 CHAIRMAN ARANOFF: Okay. I may come back to  
19 that later, but I'm just looking at some other demand  
20 factors that I wanted to go through.

21 I guess we know that a number of traditional  
22 applications for PVA in the U.S. market are shrinking  
23 in the textile and paper industry, for example. You  
24 mentioned in your testimony that there are some  
25 potential new applications, including photovoltaic

1 applications, and I think I've heard biodegradable  
2 plastics as a new application.

3 There was some reference made to the fact  
4 that at least in DuPont's projections that these  
5 weren't likely to be large consumers of PVA in what we  
6 would consider to be the reasonably foreseeable  
7 future, but I wanted to see if the parties could put  
8 some numbers behind that, and I invite Solutia to do  
9 the same.

10 How much PVA could we expect to go into  
11 these new applications and any other new ones that I  
12 haven't mentioned say between now and the end of 2010,  
13 give or take?

14 MS. KORTE: We'll address that in the  
15 posthearing brief, including our projections of growth  
16 for those industries.

17 CHAIRMAN ARANOFF: Okay. And I know that  
18 those predictions sort of depend on what happens to  
19 the global economy now and then, so if you've had a  
20 range of different predictions depending on different  
21 economic assumptions, that would be helpful to see.

22 MS. KORTE: We'll show you both our  
23 projections from say six months ago, as well as our  
24 current projections on growth. While they still are  
25 what we would call a hockey stick of growth, the trend

1 has certainly plateaued and shifted.

2 CHAIRMAN ARANOFF: Okay. Since I'm almost  
3 out of time, I'll save the rest of my demand questions  
4 for the next round and turn to Vice Chairman Pearson.

5 VICE CHAIRMAN PEARSON: Thank you, Madam  
6 Chairman.

7 I also would extend my greetings to the  
8 panel, and although getting around Washington after  
9 the hearing might be a little complicated, take some  
10 consolation from the reality that it should be a lot  
11 simpler than it was a week ago today.

12 Mr. Purvis, you had mentioned that petroleum  
13 had gotten up to \$147 a barrel last summer, but let me  
14 clarify. I had the impression that the major input  
15 cost for the production of the product would be  
16 natural gas. So is petroleum also a significant cost  
17 driver?

18 MR. PURVIS: Yes, it can be. Again, if you  
19 look at the board here obviously natural gas is a very  
20 significant input not only as a raw material, but as  
21 an energy source.

22 One of the most substantial components of  
23 the chemistry that we purchase from the outside market  
24 is ethylene, and ethylene can be produced from a  
25 variety of sources, certainly from natural gas or from

1 crude oil derivatives, so the answer is yes, it's  
2 both. It's both.

3 You know, the trend we saw last summer in  
4 crude oil was very similar to the trend we saw in  
5 natural gas where natural gas prices reached I think  
6 \$13 or \$14 per MMBTU by late summer, which is the  
7 highest we've seen in a number of years.

8 MS. KORTE: And I'll echo Mr. Purvis'  
9 comments. The natural gas did peak out around \$12.80  
10 to \$13 per million BTUs, and that's dramatically at  
11 three X what it is today, for example.

12 Also, ethane, which is derived from natural  
13 gas and is what the majority of the ethylene in the  
14 U.S. is cracked from, has been trending not just  
15 natural gas, but also crude oil as ethane goes on  
16 parity with naphtha in terms of what people are buying  
17 to crack.

18 So even though we are derived from a natural  
19 gas liquid in ethane and DuPont has an ethylene  
20 cracker that cracks ethane, it has been tracking the  
21 crude oil market.

22 VICE CHAIRMAN PEARSON: Okay. And the  
23 ethylene production that you mentioned that's a  
24 precursor. Do you have some idea of what percentage  
25 of U.S. production of ethylene is derived from natural

1 gas versus petroleum derivatives?

2 MS. KORTE: I don't have the exact numbers,  
3 but we can answer that in the postconference brief.

4 VICE CHAIRMAN PEARSON: Okay.

5 MR. PURVIS: Just directionally, Mr.  
6 Pearson, I think probably half or better of the Gulf  
7 Coast ethylene producers are ethane based or are  
8 natural gas based ultimately.

9 That's not to say that the pricing structure  
10 in the industry is based purely on -- in periods of  
11 tight supply you see prices for ethylene which are  
12 established by the margin producer, but I think  
13 probably better than half are ethane based on the Gulf  
14 Coast.

15 VICE CHAIRMAN PEARSON: Okay. Well, thanks  
16 for those explanations.

17 But I would be correct if I walk out of here  
18 today thinking that natural gas is somewhat more  
19 important than petroleum as a cost factor for PVA  
20 production?

21 MR. PURVIS: I think that's a fair comment  
22 for us.

23 VICE CHAIRMAN PEARSON: Okay. Thanks. It's  
24 somewhat unusual to have an antidumping case involving  
25 a product that is so actively exported by U.S.

1 producers.

2 I mean, it's not unusual to have two percent  
3 or five percent of domestic production exported, but  
4 when we get up to the levels that we have here it's  
5 surprising.

6 So I would conclude from that that U.S.  
7 producers are competitive in the global marketplace  
8 because you're putting a lot of product out there and  
9 competing.

10 So the question then is why are U.S.  
11 producers able to compete effectively against PVA from  
12 the subject countries in third country markets, yet  
13 are here asking for protection to be continued in the  
14 home market?

15 MR. GREENWALD: The answer to your question  
16 begins with the performance of the U.S. industry.

17 You have financials before you. You have  
18 production data. You have shipment data. They  
19 include both your exports of domestically produced  
20 material, as well as your -- domestically produced  
21 material that's sold domestically.

22 The first question you have to ask yourself  
23 is given those financials, when you talk about  
24 competitive if what you mean by that is the ability to  
25 sell at presumably a price that is greater than your

1 variable cost then you may be competitive for a couple  
2 of days, but the business isn't viable.

3 In order to do the analysis that you would  
4 like done, what you have to take is your average  
5 export prices against your average cost and look at  
6 competitive not in terms of the ability to meet  
7 whatever pricing there is on a variable cost basis,  
8 but rather whether or not --

9 MR. GREENWALD: -- prevailed in the U.S.  
10 market, the business could survive. And I would  
11 submit to you that the answer is very clear that the  
12 business could not and would not survive.

13 VICE CHAIRMAN PEARSON: I'm sorry, your  
14 saying the business would not survive if?

15 MR. GREENWALD: If the pricing patterns of -  
16 - what you see, it's prices in export markets, in some  
17 Asian markets with the prices here. You have issues  
18 of product mix. You have all sorts of complications  
19 when you look at values, but I think you've heard the  
20 testimony here that prices offshore as a  
21 generalization are less firm than prices in the United  
22 States.

23 So in third country markets, you were given  
24 the example of Latin America where Celanese is now  
25 looking at -- I believe this was your testimony, Lou,

1 or was it you, in Latin America? Well, looking at  
2 having to withdraw because the pricing has reached the  
3 point where it is nonviable. If those prices were the  
4 prices that were to prevail in the United States  
5 market, and that's the core problem we face here, the  
6 business would not survive. The economics of the  
7 business would not support reinvestment and ultimately  
8 they'd have to wind down.

9 VICE CHAIRMAN PEARSON: Yeah, but that still  
10 doesn't really address the question of how over a  
11 period of years has the domestic industry exported a  
12 substantial percentage of its production and seemed to  
13 find buyers and compete in some way against subject  
14 producers in those third country markets. Are you  
15 alleging, Mr. Greenwald, that all of those sales have  
16 been effectively at a loss for the U.S. industry?

17 MR. GREENWALD: No. No, it's not again, and  
18 when you look at what goes on in a business and you  
19 look at economics what you're looking at is the return  
20 that you get over time.

21 VICE CHAIRMAN PEARSON: Right.

22 MR. GREENWALD: And it is probably not true  
23 that all of those sales were at a loss. You could do  
24 a rough unit value comparison and just allocate your  
25 costs sort of on average between export sales and

1 domestic sales and do sort of a financial analysis,  
2 and ask yourself the question, if the economics of  
3 exporting were the only economics of this business  
4 would the business survive? I haven't done that  
5 analysis but I suspect the answer is no. Now as you  
6 well know given your experience in business, you have  
7 a fixed cost base, you have to absorb those fixed  
8 costs over a quantum of sales, and if to do so you  
9 have to export, you export.

10 VICE CHAIRMAN PEARSON: Well Mr. Purvis, Ms.  
11 Korte, do you have?

12 MR. PURVIS: Yeah, I would just add that,  
13 look the domestic industry, our capacity was  
14 constructed in a period of time where domestic demand  
15 was substantially more than it is today. So we've  
16 evolved to the state of the market currently as a  
17 function of the exodus of significant segments of  
18 demand in our marketplace. And we've had to fight and  
19 scratch and claw to gain share in the export markets  
20 to stay viable. So I don't know if that helps add  
21 some color.

22 MS. KORTE: And speaking for DuPont, it's  
23 only been recently in the last year or two that our  
24 prices in our export markets got to the point where we  
25 covered both our variable and fixed cost of sales.

1 And so for years, especially in the 2003 to 2006  
2 period, those sales were really done to try to just  
3 cover our variable costs and cover some portion of our  
4 fixed cost again because we wanted to run our plant as  
5 efficiently as possible and lower our overall fixed  
6 cost per pound.

7 VICE CHAIRMAN PEARSON: Okay, well I may  
8 have a followup question later but the light is  
9 changing now so back to you, Mme. Chairman.

10 CHAIRMAN ARANOFF: Commissioner Lane.

11 COMMISSIONER LANE: Good morning to all of  
12 you and thank you for coming. And I have some  
13 followup questions to the Vice Chairman relating to  
14 exports. I would like for you to discuss the mix of  
15 sales of U.S. produced PVA within the United States  
16 and into its export markets. Could you describe the  
17 extent of exports by U.S. producers, the uses of  
18 exported PVA as compared to the uses of PVA sold in  
19 the U.S. market, and whether U.S. production destined  
20 for export is a significantly different product or the  
21 same product that is sold in the U.S. market?

22 MS. KORTE: For DuPont, the material that we  
23 sell in the export markets is, because it is only our  
24 La Porte production, is only our four fully hydrolyzed  
25 grades. It's serviced primarily on our export markets

1 the textile industry, some small adhesive  
2 applications, and some small paper application.

3 COMMISSIONER LANE: Okay, I mean you're  
4 going to have to forgive me because -- so are your  
5 exports the same product that you sell in the domestic  
6 industry?

7 MS. KORTE: Yes.

8 COMMISSIONER LANE: Okay, thank you.

9 MR. PURVIS: The same goes for Celanese.  
10 The products we export are identical to the products  
11 we sell domestically. We have a broader portfolio of  
12 product offering at Celanese, and the markets, the end  
13 uses that we serve offshore are largely the same as  
14 what we serve domestically, emulsion polymers,  
15 adhesive compounds, textile producers, paper  
16 manufacturers, same products. And the customers that  
17 we sell offshore are competing with our domestic  
18 customers in some cases as well.

19 COMMISSIONER LANE: Okay, to the extent that  
20 you can I would like you to comment on the value of  
21 PVA sold for export as compared to the value of PVA  
22 sold in the U.S. market and the reasons for any  
23 differences in value. And you might have to do this  
24 posthearing but to the extent that you can do it now  
25 that would help.

1                   MR. PURVIS: Let us address it posthearing.  
2                   You know I think the direction of the data sets that  
3                   the offshore markets, the export markets are typically  
4                   priced lower than our domestic market. But let us  
5                   address it in some detail in the posthearing if you  
6                   like.

7                   COMMISSIONER LANE: Okay, then I have some  
8                   more questions relating to this issue. Similarly,  
9                   without divulging BPI, I would like for you to look at  
10                  the average unit value of domestic production sold in  
11                  the United States, the average unit value of domestic  
12                  production sold for export, and the average unit value  
13                  of cost of goods sold on either Table C-1 or Table 1-1  
14                  in the prehearing report.

15                  I don't understand the differences in  
16                  average unit values particularly when comparing sale  
17                  prices of cost of goods sold. I would like you to  
18                  explain the reasons that the domestic industry would  
19                  be experiencing the differences between average unit  
20                  prices and cost of goods sold as shown in the  
21                  prehearing report. Would this be a product mix or  
22                  something else?

23                  MR. GREENWALD: Commissioner Lane, the  
24                  industry witnesses haven't seen the average unit value  
25                  data because it's confidential. It's an aggregate of

1 a limited number of U.S. producers. So they can't  
2 answer that. And I don't know that I can answer it,  
3 because it is treated as confidential information, in  
4 a public session. I would be happy to address the  
5 issue either where I'm free to do so in a closed  
6 hearing or alternatively in the confidential version  
7 of the postconference brief.

8 COMMISSIONER LANE: Okay, I hope your  
9 memory's good because I have a few more questions and  
10 I assumed that you would do them either post hearing  
11 or in the closed session that we have this afternoon.  
12 Table 3-9 of the prehearing report provides a  
13 breakdown of net sales quantity and value by domestic  
14 producer. Could you provide posthearing a schedule  
15 for each of the domestic producers represented on this  
16 panel further breaking down the data on Table 3-9 to  
17 show the net value of sales in the United States and  
18 the net value of export sales?

19 MR. GREENWALD: Yes I could, and I think  
20 what the data will show is that the points we are  
21 making about the viability of the business if export  
22 pricing were to prevail in the U.S. market are  
23 accurate.

24 COMMISSIONER LANE: Okay, could you explain  
25 how the export market that domestic producers serve

1 and the extent of export affects our evaluation of the  
2 likely impact of revocation of the orders in this  
3 proceeding? For example, would an increase in  
4 unfairly traded imports upon revocation of the orders  
5 be likely to have any impact on your export markets?

6 MR. GREENWALD: Well the answer, and sort of  
7 the public answer that I can give here is that lifting  
8 of the orders, I don't know whether they would have  
9 any impact on export markets. The concern we have,  
10 which I think is supported by the statistics, is that  
11 lifting of the orders would transpose to the U.S.  
12 market because the Chinese, the Japanese, and the  
13 Koreans would be free to sell here as they were in  
14 2002 without any dumping discipline, would transpose  
15 the pricing in offshore markets to the United States  
16 which would have very serious adverse consequences.

17 COMMISSIONER LANE: Okay, thank you. I  
18 understand that each domestic producer recycles or  
19 recovers a part of raw material inputs and the value  
20 of these byproducts were deducted from the cost of  
21 goods sold. Could you indicate whether you are  
22 selling the byproducts or reusing the byproducts  
23 yourselves in the production process for PVA? And if  
24 you are selling the byproducts please indicate whether  
25 they are sold to affiliated or unaffiliated parties

1 and what the byproducts are used for.

2 MR. PURVIS: Ms. Lane, for Celanese,  
3 typically the byproduct acetic acid, which I think  
4 you're referring to, is recycled back into our  
5 process, back in either directly into the production  
6 of vinyl acetate or it goes net into our system. It  
7 could be sold into the market directly as acetic acid.

8 COMMISSIONER LANE: Okay, I thought I  
9 understood your little chart, and I sort of liked your  
10 little chart. That's about the extent of how I can  
11 understand chemistry is by that type of drawing.

12 MR. PURVIS: Me too.

13 COMMISSIONER LANE: So when you use the  
14 acetic acid yourself reusing it, do you put up a value  
15 on that and use that to still deduct against your cost  
16 of goods sold or do you just sort of mix it all up?

17 MR. PURVIS: Yeah, the data that Mr. Yost  
18 put together I think demonstrates that we value the  
19 byproduct acetic acid at market. So effectively the  
20 PVA of Celanese receives a credit based on the market  
21 value of that contained acetic acid that comes out of  
22 our process as a byproduct. So it's fully reflected  
23 in the economics that you see.

24 COMMISSIONER LANE: So whether you recycle  
25 it yourself or whether you sell it to someone else, on

1 your books it is put down at market value?

2 MR. PURVIS: Our raw material vinyl acetate  
3 comes to us at cost. The byproduct acetic acid that  
4 goes out of our process is credited to us at market.  
5 So put simply the way that we've, it's not the way  
6 that we manage our business, but it's the way we were  
7 requested to report our profitability. And by using  
8 this methodology, what we would say that Celanese  
9 scholarshipped our PVA business. We've made it look  
10 as attractive as it possibly could through our  
11 integration chain for the purposes of this report.

12 COMMISSIONER LANE: And does DuPont do the  
13 same thing?

14 MS. KORTE: Commissioner, DuPont recycles  
15 100 percent of its acetic acid, and since we are not,  
16 you know we do not produce acetic acid we value the  
17 byproduct acetic acid at the market price that we buy  
18 acetic acid on the market for. And that is how we  
19 reflect our books both internally and how we reflected  
20 the value to the Commission.

21 COMMISSIONER LANE: Okay, thank you. Mme.  
22 Chair, I'll wait until my next round.

23 CHAIRMAN ARANOFF: Commissioner Williamson.

24 COMMISSIONER WILLIAMSON: Thank you, Mme.  
25 Chairman. Just continuing on this use of the acetic

1 acid. Mr. Purvis, you mentioned that, well I guess  
2 the force majeure that you had was related to acetic  
3 acid production, and I was just curious, give me more  
4 detail on that. Because it sounded like you're  
5 getting almost 90 percent of your acetic acid comes  
6 from the byproduct process so I was just wondering why  
7 the problem?

8 MR. PURVIS: Yeah, acetic acid is a  
9 significant merchant product for Celanese. We pride  
10 ourselves on this integrated value chain where we  
11 produce all the chemistries in step from acetic acid  
12 through to PVA. But our acetic acid does recycle.  
13 And it can be a virtual recycle where I'm taking  
14 acetic acid as a byproduct out of one of my production  
15 facilities and because of logistics advantages putting  
16 it directly into the market.

17 Or it can be an actual recycle. For example  
18 what we do in the Gulf Coast in our Pasadena, Texas  
19 facility where the byproduct goes directly back into  
20 vinyl acetate production. There's a little bit of a  
21 time lag in this. If you were to cease the  
22 availability of what we call make-up acetic acid  
23 there's a time lag as this acetic acid --

24 COMMISSIONER WILLIAMSON: What kind of  
25 acetic acid? What is it?

1           MR. PURVIS: We call it make-up, make-up  
2           acetic acid. Again as you see on this chart we  
3           recycle about 90 percent of the contained acetic acid  
4           that comes through the process. The other 10 percent  
5           has to be added as make-up to refill the molecule if  
6           you will. But again there's a bit of a time lag as  
7           the acetic acid works its way through this process.  
8           But with a small amount of make-up acetic acid, 10  
9           percent is what we've illustrated here, the chemistry  
10          is almost self contained.

11          COMMISSIONER WILLIAMSON: The reason why I'm  
12          asking the question is, you know there have been  
13          charges about your reliability and you said that when  
14          force majeure year period dealt with the acetic acid.  
15          So I was trying to figure out, you know what  
16          significance could be attached to that in terms of  
17          either your commitment or your ability to supply your  
18          purchaser some PVA.

19          MR. PURVIS: Yeah, again to illustrate our  
20          force majeure, the issues that led to our needing to  
21          declare a force majeure were caused by acetic acid  
22          production, not by issues with our PVA production  
23          asset. Mr. Williamson, it was a perfect storm because  
24          you have the world's largest production facility,  
25          single largest reactor that produces acetic acid, that

1 had a production failure at a period of time where the  
2 global market was completely sold out. So you have  
3 the stars aligning here to create a perfect storm in  
4 our industry. I'd ask you to go back and look at the  
5 data that we've published, and I don't know if it's  
6 individually or just --

7 COMMISSIONER WILLIAMSON: Well let me cut to  
8 the chase real quick, I mean did you have to do force  
9 majeure in terms of supplying other users of acetic  
10 acid?

11 MR. PURVIS: Yes. Yes, in fact we declared  
12 force majeure on acetic acid probably two months or a  
13 month and a half before we declared force majeure on  
14 PVA because the outage extended beyond what we thought  
15 it would.

16 COMMISSIONER WILLIAMSON: Okay, I think.

17 MR. PURVIS: Sorry.

18 COMMISSIONER WILLIAMSON: Now I understand,  
19 thank you. Let me turn to another question. Looking  
20 at employment, I mean clearly your workers don't seem  
21 to cost a whole lot relative to the end value, but I  
22 was just curious about what's happened to employment  
23 over the period of time that we're looking at and what  
24 impact there might be on employment if the orders were  
25 revoked.

1 MS. KORTE: I'll start with the DuPont  
2 facility. Our production related workers have varied  
3 throughout the period and I think we discussed that  
4 and you can see that in our data. Certainly the cost  
5 to retain an employee over the last three years,  
6 particularly as the Gulf Coast experienced huge  
7 increases in refinery production and things, our wages  
8 had to increase in 2005 through 2008 to be able to  
9 retain qualified employees.

10 So the cost per individual worker has gone  
11 up, not only in our operators and our mechanics but  
12 also even in our technical staff as we saw, you know  
13 folks like BP and Exxon offering our technical people  
14 as well as our operators signing bonuses in order to  
15 get qualified operators. So our costs have gone up.  
16 Our staffing levels at the plant have remained  
17 relatively constant.

18 From an operations and maintenance  
19 standpoint you need a certain amount of workers to  
20 safely operate these facilities that are highly  
21 hazardous processes. On the sales and the staffing  
22 side, back in 2004 or 2003 when these orders were  
23 imposed, just to give you an example, we had five  
24 sales people in the U.S. serving the U.S. industry,  
25 we're now down to one.

1           We had three technical service people to  
2           service the domestic industry, we now have one person  
3           that we are trying to use to support not only the U.S.  
4           domestic industry with any service questions our  
5           customers have, but also through email, phone calls,  
6           and an occasional trip support the rest of our  
7           customers in any export market. Our business staffing  
8           has dropped. We basically have a business team that's  
9           three people, and myself and Miriam Ronchi are two of  
10          the three so you've got the vast majority of our  
11          vinyls business team here. So we've cut our staffing  
12          as much as we can to try to improve the profitability  
13          of this business but we're simply down to bare bones.

14                 MR. PURVIS: Let me address the second part  
15          of your question. The vast majority of the people  
16          that are involved in our PVA business are at our  
17          manufacturing sites. I said in my prepared comments  
18          that we believe there exists in the market today a  
19          state of overcapacity driven by a collapse in demand  
20          the magnitude of which I have not seen in my career.  
21          We don't know how long or how deep this is but it's  
22          long and deep as best we can tell. And we believe  
23          there's got to be capacity that comes out of the  
24          global industry. It's binary for us. If we shut an  
25          asset it's a complete elimination of jobs, it's on or

1 off for us in terms of our staffing levels in this  
2 business.

3 COMMISSIONER WILLIAMSON: Is there a threat  
4 to your competitiveness, then? Future competitiveness  
5 that -- the orders were revoked?.

6 MR. PURVIS: Absolutely. Absolutely.

7 MS. KORTE: Yes, and, you know, I mean, with  
8 only one asset if we're not able to profitably and  
9 sustainably operate that facility, we don't have a  
10 choice. I mean, the plant either runs or it doesn't.  
11 And so while we had the plant down, for example, the  
12 last six to seven weeks, we still employed all those  
13 people.

14 We kept them busy doing housekeeping, I  
15 mean, the place is cleaner than I've ever seen it, but  
16 that's not sustainable. And so if this industry is not  
17 going to be viable, then we're going to have to look  
18 at other business models to support our downstream  
19 industry. We're in the PVB market to stay and we've  
20 had a PVA business to support that PVB business,  
21 primarily, with a mission to sell the rest of our  
22 excess capacity as profitably to generate earnings and  
23 cashflow that we can.

24 If that's not going to be sustainable for  
25 the long term, especially if we're in an economic

1       downturn and have a U.S. industry that's not healthy,  
2       then we're going to have to look at other business  
3       models, and that could mean shutting down our assets.

4                COMMISSIONER WILLIAMSON: Okay. Thank you  
5       for that clarification because no one had mentioned  
6       workers too much in the prepared statement, so I was  
7       wondering what was invested in them. Let me turn to  
8       another question. This is photovoltaic demand.

9                I must admit, I'm not familiar at all with  
10       the photovoltaic itself. Are they things that are  
11       likely to be produced in the United States or do we  
12       see so much with electronic products that they're more  
13       likely to be produced offshore?

14               MS. KORTE: I can't speak to where the  
15       module makers. I know there's many module makers. I  
16       think the primary manufacturing right now is in  
17       countries like Europe, as well as Asia. Our assets  
18       are working at this point to qualify our materials in  
19       these applications and then we'll sell our PVB that we  
20       produce here, as well as in our facilities in Europe  
21       and in Korea, into those applications. I can address  
22       where the manufacturer is in our postconference brief.

23               COMMISSIONER WILLIAMSON: Okay. Thanks.  
24       Because I was just trying to figure out, even if  
25       there's more demand for photovoltaic itself how much

1 of that a year you're likely to get from U.S.  
2 production of --

3 MS. KORTE: Well, our demand would come to  
4 our PVB manufacturing and our assets are primarily in  
5 the U.S. You know, where we consume the PVA would be  
6 in the U.S. to service that market regardless of  
7 whether the module is actually manufactured.

8 COMMISSIONER WILLIAMSON: Okay. Thank you.

9 MS. KORTE: You're welcome.

10 COMMISSIONER WILLIAMSON: Okay. Thank you  
11 for those answers.

12 CHAIRMAN ARANOFF: Commissioner Pinkert?

13 COMMISSIONER PINKERT: Thank you, Madame  
14 Chairman. Does the panel agree with Solutia's  
15 argument that U.S. demand is declining in downstream  
16 sectors that have been traditionally served by subject  
17 imports?

18 MR. PURVIS: Yes. I think that's a fair  
19 comment.

20 COMMISSIONER PINKERT: If so, perhaps, Mr.  
21 Greenwald, you'd like to comment on what the relevance  
22 of that observation might be to the task in front of  
23 the Commission in this case.

24 MR. GREENWALD: Well, I mean, it seems to  
25 me, I'm not quite sure why this was a point that

1 Solutia made. If what you have are areas of declining  
2 demand but you still have demand, and if you invite  
3 dumped imports to supply that demand even though it's  
4 declining, you have more rather than less price  
5 impact, and price-based competition and price  
6 pressure.

7 I mean, it would seem to me that if Solutia  
8 were to say subject imports will come into segments of  
9 the market that are growing and for which the U.S.  
10 industry can't meet the demand, then I suppose I would  
11 have a tougher time trying to persuade you why you  
12 should maintain the orders.

13 But if what they're saying is imports are  
14 likely to come into sectors of the U.S. market that  
15 are already hard pressed, I mean, it seems to me self-  
16 evident it just adds to the pressure on the U.S.  
17 industry in an already declining market.

18 COMMISSIONER PINKERT: Thank you. Now, I'd  
19 like to stay with you, Mr. Greenwald, to address  
20 another legal issue. How should the Commission address  
21 the issue of domestic industry vulnerability in a time  
22 of recession? Let me just elaborate on my question a  
23 little bit.

24 Is it your view that it's essentially a  
25 given that in conditions of recession the domestic

1 industry is going to be vulnerable, particularly if  
2 demand for the product domestically is going to be  
3 down as a result of recession, or is the analysis that  
4 you're suggesting more complex than that?

5 MR. GREENWALD: I hesitate to claim much  
6 complexity on anything. I recall when I first got  
7 into this business and was working on I think it was  
8 either the Trade Act of 1979 or the Trade Act of 1974  
9 drafting with Ways & Means, and Finance Committee, and  
10 Senate a provision on causation which talked about the  
11 added vulnerability to dumped import competition of  
12 industries that are being hammered by other factors.

13 It always struck me as not only economically  
14 sound but a part of the statutory construct, that is  
15 where your task is to assess the probable impact of in  
16 this case revoking an order and you find that there is  
17 a deep recession with a likelihood of excess capacity  
18 globally, two things follow.

19 One is that the foreign capacity that has  
20 been out of the U.S. market because of the dumping  
21 order is much more likely to come into the U.S. market  
22 if the dumping order is revoked. And that's one  
23 aspect of causation.

24 The second is that when you have an industry  
25 that is reeling because the bottom has fallen out of a

1 market, the consequences of revoking an order and  
2 inviting in subject imports without regard to  
3 antidumping discipline threaten the industry's  
4 survival. If this were a short swing, you know, we'd  
5 probably use hyperbole anyway because it's sort of in  
6 the nature, but it wouldn't be that credible.

7 In this context, in this environment where  
8 you have three countries that have made a concerted  
9 policy of export led growth at a time when global  
10 demand is shrinking rapidly, the prospect, the likely  
11 consequence of revoking the order is, I believe, the  
12 survival of one or both of these U.S. manufacturers.

13 Again, I don't know if it goes to it's a  
14 particularly complex analysis but it does seem to me  
15 to be an analysis that is central to your  
16 consideration of perspective impact of revoking the  
17 order. I mean, I hope that answers the question.

18 COMMISSIONER PINKERT: All right. Let me  
19 just ask you a quick follow-up to that. Would it be  
20 relevant to what you just said if we knew that those  
21 three countries were not going to act vigorously to  
22 stimulate domestic consumption in order to address the  
23 recession?

24 MR. GREENWALD: Yes, it would matter. I  
25 mean, it's something that I wanted to say in the

1 opening remarks because I think it is critical to your  
2 assessment of this case and the context it arises. We  
3 are in the mess we are in in part because of export  
4 led growth by major trading countries that have not  
5 succeeded in stimulating their domestic demand.

6 I see no change in approach. One of the  
7 issues that has been discussed amongst us as we were  
8 looking over this case was China's decision to  
9 reinstitute tax rebates in order to maintain their  
10 export levels.

11 The antidumping law is one of the very few  
12 tools that the U.S. industry and the U.S. government  
13 has to say to countries that would otherwise be  
14 inclined to export their way out of a problem and  
15 shift the burden of adjustment to the U.S., not here,  
16 not now. To me, it's the context in which this case  
17 arises and the context that I hope all of you take  
18 very seriously.

19 COMMISSIONER PINKERT: Well, for purposes of  
20 the posthearing, if you could add any detail on the  
21 policies that you've alluded to in your answer, that  
22 would be helpful. Now, let me turn back to the  
23 witnesses on the panel concerns Solutia's argument  
24 that the continuation of the orders poses a grave risk  
25 to the downstream PVB industry because of difficulties

1 in obtaining supplies from domestic producers.

2 How do you respond to that? Not so much on  
3 a legal level, but on just a factual level, how do you  
4 respond to that?

5 MR. PURVIS: I'd be happy to sell it more,  
6 Mr. Pinkert.

7 MS. KORTE: Me, too.

8 COMMISSIONER PINKERT: Then I'll turn to Mr.  
9 Greenwald and ask what relevance we should give to the  
10 question of the impact of the orders on downstream  
11 industries.

12 MR. GREENWALD: As a legal matter, I think  
13 the answer is nothing except to the extent that it  
14 impacts U.S. production. I mean, the statutory task  
15 is defined as assessing injury to the domestic  
16 industry that produces the like product, and that  
17 isn't the PVB industry, but I do think that you are  
18 when you think about this right to entertain the  
19 question what does it do long term to the customer  
20 base of the U.S. industry?

21 What I'd like to go back to there is two  
22 points. One is in the postconference brief we will  
23 get into some detail responding to some of the  
24 allegations that have been made about supply  
25 reliability of both of these companies. They are

1 anxious to put information on the record. Second, I  
2 think you have to take both of them at their word when  
3 they say if Solutia wants more PVA, they are more than  
4 happy to supply it to them.

5 COMMISSIONER PINKERT: Thank you. Thank  
6 you, Madame Chairman.

7 CHAIRMAN ARANOFF: I want to start out with  
8 something of a technical question which I think is  
9 going to provide important background to a lot of the  
10 discussion that we've had. There's been discussion  
11 about how PVA facilities need to operate at very high  
12 levels of capacity utilization in order to be  
13 economic, and so what I wanted to understand is when  
14 you're operating these assets, are your only choice on  
15 or off?

16 Are there incremental things that you can do  
17 to reduce the rate of production or do you just shut  
18 down for certain periods of time, that's the only  
19 option when you're trying to reduce your output in the  
20 face of demand?

21 MS. KORTE: We're able to turn down our  
22 facility to about two-thirds of what its typical full  
23 rate capacity would be, and after that it's simply not  
24 efficient to run it, and so at that point, then we  
25 would have an on and off. So to the extent that we

1 could run continuously at a two-thirds rate, that  
2 would obviously be our first choice; however, that was  
3 not an option in the fourth quarter.

4 CHAIRMAN ARANOFF: Okay. And can you  
5 explain how that would work? Do you have more than  
6 one line and you take one down? Do you slow the rate  
7 of processing through your facility? How does it  
8 work?

9 MS. KORTE: DuPont is a single line facility  
10 and so we would simply slow the rate down.

11 CHAIRMAN ARANOFF: Okay. Mr. Purvis?

12 MR. PURVIS: Madame Chairman, we have  
13 several, multiple production lines. We have similar  
14 constraints in that we can reduce the rate of  
15 production by about a third on each of those  
16 individual lines. We also have a little greater  
17 flexibility in that we can shut down a line, or two  
18 lines, or three lines.

19 Ultimately, the concern that Celanese has as  
20 a producer in this industry is at what level do we  
21 have to "campaign" our units, meaning shut them  
22 completely down as we draw inventory, and as inventory  
23 gets low restart them and run them for a finite period  
24 of time and shut them completely down again? We're at  
25 a level of demand in Q-4 and in Q-1 where we are

1 campaigning our units where we're shutting them down  
2 completely and restarting them as necessary. It's  
3 expensive, and it's not efficient.

4 CHAIRMAN ARANOFF: So are there additional  
5 costs associated with shutting down and then turning  
6 back on? I know in some industries that, you know,  
7 you have to heat up a furnace or there are things you  
8 have to do to get started again that add cost.

9 MS. KORTE: Certainly when you start up a  
10 unit you have perhaps production of material that  
11 would not be first quality. As you get your first  
12 process lined out you could have waste and raw  
13 materials of yield as you purge equipment and things,  
14 and so that's why we like to choose to run them  
15 continuously.

16 CHAIRMAN ARANOFF: Is there some time period  
17 after the equipment is shut down after which you can't  
18 restart it? I know that's true in some industries but  
19 not all.

20 MS. KORTE: No, not specifically. Certainly  
21 as our units shut down for six to seven weeks, as  
22 we've come back up we've found things. We have pump  
23 seals or little leaks here and there as the equipment  
24 has, you know, gotten cold and contracted. So I think  
25 the start up process is longer. We've seen that in

1 the last weekend, but we were able to start it up.

2 CHAIRMAN ARANOFF: Okay. Let me go back to  
3 some of the demand related questions that I was asking  
4 in my first round and didn't get a chance to finish.  
5 The first thing I just wanted to clarify, are DuPont  
6 and Solutia the only PVB producers in the U.S. market  
7 or are there other purchasers of PVA who are making  
8 PVB in the U.S.?

9 MS. KORTE: Sakasui is the only other PVB  
10 producer that I'm aware of that produces PVB film.  
11 However, they do not consume PVA in the U.S. They  
12 import the PVB resin and simply extrude in the U.S.  
13 market.

14 CHAIRMAN ARANOFF: Okay. The quality or  
15 grade of PVA that DuPont produces for its own  
16 production of PVB, is that the same product that you  
17 would sell to Solutia or are they buying something  
18 different?

19 MS. KORTE: I'll address that in the  
20 postconference brief.

21 CHAIRMAN ARANOFF: Okay. I'm trying to, as  
22 you can probably guess, get at the arguments that  
23 Solutia's making that DuPont has been either unable or  
24 unwilling to meet certain quality specifications that  
25 they have for the PVA that they purchase, and so any

1 information that you can give me on, and not just as  
2 between DuPont and Solutia, but if there's anything  
3 that puts it in global context in terms of what goes  
4 into PVB and how much it can vary, that would be  
5 helpful.

6 MR. GREENWALD: Let me just say for the  
7 public record that on that point Solutia's testimony  
8 has been grossly misleading. We cannot get into the  
9 specifics in the public forum but the companies are  
10 anxious to address them in detail in the  
11 postconference brief.

12 CHAIRMAN ARANOFF: Okay. So my next  
13 question, which probably also is going to lead to the  
14 posthearing, is we've had these discussions about the  
15 extent to which producers can reduce their capacity to  
16 meet demand.

17 In one of the questions that I had for  
18 DuPont, since you have this captive production of PVB,  
19 and you've said you're very committed to the PVB  
20 market and we see that in the long term there's growth  
21 potential there, can you operate your U.S. facility  
22 solely to captively serve your PVB on the model that  
23 Solutia does? I mean, is that a successful model for  
24 you, and, if not, why not?

25 MS. KORTE: We've never tried to operate it.

1 Our demand has simply not been there to be able to do  
2 that. Typically, our internal consumption has been  
3 about half of our total capacity, and so one of the  
4 things we are looking at as we look to growth models  
5 out to 2013 or 2014 where the PVA that we need for our  
6 internal PVB consumption may take a larger percentage  
7 of our production, we're looking at what that might  
8 mean in terms of not the production of the PVA itself,  
9 but simply the auxiliary systems supporting that  
10 plant, such as solvent recovery and things.

11 We do rely on a certain grade mix to be able  
12 to recover solvents, work off second quality materials  
13 that we would not be able to do if we were producing  
14 the material that's needed for PVB manufacturing, and  
15 so that's a study that we have under way now.

16 CHAIRMAN ARANOFF: Okay. Now I want to go  
17 back to a question that was asked earlier but I don't  
18 think whichever of my colleagues asked it got all the  
19 way through it before running out of time. Solutia  
20 argues that merchant market PVA producers are largely  
21 sheltered from any adverse effects on revocation of  
22 the orders because the majority of their sales are not  
23 into the domestic merchant market but go into either  
24 internal consumption, sales to domestic or foreign  
25 affiliates or open market exports.

1                   Is that a fair assessment? I mean, you  
2 know, you look at the data and you see that it's true  
3 that a majority of domestic production is not going  
4 into the domestic merchant market, so that's part  
5 true, but are all those other kinds of sales truly  
6 sheltered from what might happen in the event of  
7 revocation? And even if they are, you know, is there  
8 enough in the portion of the market that we're still  
9 looking at?

10                   MR. GREENWALD: The answer is no. The  
11 proof, if you need it, is the analysis that you did  
12 that supported the initial antidumping orders five  
13 years ago where the question was injury to essentially  
14 merchant market sales. There are other elements that  
15 you have to look at when you consider the issue. One  
16 is company distinctions.

17                   You have three domestic producers: Solutia,  
18 that for its own reasons opposes the order and have a  
19 certain quantum that they produce and use themselves;  
20 DuPont, which, as testimony today shows, uses about 50  
21 percent --

22                   MS. KORTE: It used to be. It's less than  
23 that now.

24                   MR. GREENWALD: For PVB?

25                   MS. KORTE: Yes.

1           MR. GREENWALD: Does not internally consume  
2 majority of its production; and then Celanese, which  
3 supplies the merchant market. The impact of revoking  
4 the orders affects each one of those companies a  
5 little bit differently. Both Solutia and Celanese are  
6 here today because their PVA business as it is now  
7 constituted will not, in their view, be able to  
8 survive in today's market a repeat of what happened in  
9 2002, 2003. It's as simple as that.

10           They depend on the domestic market. If I  
11 can add one final point. It goes on to a question  
12 raised by Commissioner Pearson. The economics of  
13 global markets or many, not all, but many offshore  
14 markets where there is no dumping discipline will not  
15 be sufficient to support a U.S. industry. If the U.S.  
16 industry had to rely entirely on export markets, my  
17 guess is the financials would be nonviable.

18           CHAIRMAN ARANOFF: Okay. Thank you. Vice  
19 Chairman Pearson?

20           VICE CHAIRMAN PEARSON: Thank you, Madame  
21 Chairman. If the United States is the highest priced  
22 market in the world, which I think was the testimony  
23 earlier, how do you export anything? I mean, are the  
24 conscious decisions made to price discriminate such  
25 that observers who are concerned about dumping

1 margins, which we here clearly are not, but observers  
2 might look at what's happening and think this is  
3 dumping. Could you comment, please?

4 MR. GREENWALD: Let me answer that. It is  
5 perfectly possible that a competitor in -- can you  
6 give me a country -- Pakistan would look at the  
7 numbers and conclude that the export price to Pakistan  
8 is lower than the price to the United States, but as  
9 you know, dumping also requires injury.

10 VICE CHAIRMAN PEARSON: No, no, no. Not at  
11 all. Dumping is just the margin of undersell.

12 MR. GREENWALD: No. That's sales at less  
13 than fair -- I mean, I hate to be finicky about it,  
14 but that is sales at less than fair value.

15 VICE CHAIRMAN PEARSON: We call it the  
16 dumping margin here, so I've been well-informed.

17 MR. GREENWALD: Okay.

18 VICE CHAIRMAN PEARSON: But as a practical  
19 matter, are you finding that consistently you're  
20 having to sell for less in global markets than you're  
21 able to sell in the United States? That's what I'm  
22 really curious about.

23 MR. PURVIS: Mr. Pearson, you've seen the  
24 profitability of our business. We would make the  
25 argument not that our U.S. prices are too high but

1 that our export prices are too low.

2 VICE CHAIRMAN PEARSON: And is that just a  
3 function of transport costs or primarily a function of  
4 transport costs? Is that making the difference?

5 MR. PURVIS: No. Not at all. I think it's  
6 a function of competition in those export markets.

7 VICE CHAIRMAN PEARSON: Okay. Well, if  
8 there's more that I should know in the posthearing,  
9 because I understand there is potential proprietary  
10 information here, please fill me in, help me  
11 understand this a bit. Next I have kind of a customer  
12 relations question that gets to an issue that other  
13 Commissioners have been touching on.

14 You know Solutia's business reasonably well,  
15 I assume, because you manufacture PVA and you sell  
16 some product to them and what not, so over the POR,  
17 was Solutia able to obtain domestically all of the PVA  
18 it needed of a grade required to manufacture PVB in  
19 their process?

20 MR. PURVIS: Mr. Pearson, we're going to  
21 submit to you in our posthearing brief some very  
22 specific data on the volume we've supplied to Solutia  
23 before and during our force majeure events, and it's  
24 confidential data, and we'll respect the  
25 confidentiality of it here, but I think it will tell

1 you a very different story then perhaps what you've  
2 been led to believe.

3 VICE CHAIRMAN PEARSON: Okay.

4 MS. KORTE: We'll address that in the  
5 postconference brief as well.

6 VICE CHAIRMAN PEARSON: Okay. Well, and I  
7 appreciate the sensitivity. I mean, you've got a  
8 major customer sitting here with a different point of  
9 view than you do and so help me understand this. It's  
10 kind of one of those, what, industry food fights or  
11 something and I hope everyone gets out of the  
12 cafeteria okay.

13 This might also be for posthearing, but are  
14 Celanese and DuPont able to reorient their production  
15 mix such that more PVA that's appropriate for the  
16 production of PVB could be produced?

17 MS. KORTE: DuPont is able to adjust its  
18 production mix. I mean, that is one of the things our  
19 plant was designed to make.

20 MR. PURVIS: The same for Celanese, Mr.  
21 Pearson. We could run a lot more PVB grade or quality  
22 PVA if needed.

23 VICE CHAIRMAN PEARSON: Okay. Thank you.  
24 Okay. Now we get to causation. I think it's not so  
25 hard to persuade me that the domestic industry is

1 likely to experience some material injury in the  
2 months ahead, largely because we can see what's  
3 happening to demand, and you've spoken to that. I  
4 mean, there's going to be a world of hurt, not just  
5 for PVA, but for a whole lot of other businesses.

6 In that context, how do we take the next  
7 step and conclude that revocation of the order would  
8 lead to subject imports causing material injury? I  
9 ask that in part because the domestic industry has  
10 done a really good job of maintaining the vast  
11 majority of U.S. market shares, so a lot of people  
12 like buying domestic product.

13 Who in a time of declining demand is going  
14 to want to go out and buy product from some country  
15 thousands of miles away?

16 MR. GREENWALD: First, most of the  
17 applications are very price sensitive.

18 VICE CHAIRMAN PEARSON: Pardon?

19 MR. GREENWALD: There's a price sensitivity.  
20 If a fund, supplier, let's say a Chinese supplier, is  
21 willing to offer five cents a pound discount, they  
22 will find buyers for that. So there's immediate  
23 pricing pressure. Second, in order to look at this  
24 causation link the statute directs you to look at  
25 capacity. Is there the capacity overseas, in this

1 case in the subject countries, to supply the U.S.  
2 market given the condition going forward?

3 If you accept the proposition that demand  
4 has indeed fallen dramatically and will continue to be  
5 deeply depressed, and this is the global economic  
6 problem, then it seems to me you have to accept the  
7 proposition that there is ample capacity overseas to  
8 supply the U.S. market, ample capacity in the three  
9 subject countries.

10 The third part of the analysis is is there  
11 any evidence in the past of what happened under  
12 similar circumstances? If you look at the data that  
13 the Commission staff has collected, the answer is  
14 clearly yes, there was a surge in subject imports,  
15 particularly from some countries rather than others.

16 The fourth question you have to ask yourself  
17 is what do the data that have been collected by the  
18 Commission tell you about pricing? You've heard, and  
19 I think you accept as true, that pricing in third  
20 country markets is lower than in the United States,  
21 and therefore, there is an economic incentive to ship  
22 into the United States at at least those prices given  
23 the excess supply.

24 You have detailed Commission data on exports  
25 from each of the subject countries an average unit

1 value. What we did in our prehearing brief was  
2 compare those average unit values to third country  
3 markets to the average unit value of U.S. producer  
4 shipments into the merchant market.

5 VICE CHAIRMAN PEARSON: Right, but then how  
6 do you explain away the majority overselling that we  
7 see in our pricing products, you know, because I don't  
8 know that --

9 MR. GREENWALD: Because its subject to  
10 orders. There are two things you have to look at.  
11 The hypothesis is not what have the Japanese, in  
12 particular, or the Koreans, or the Chinese been doing  
13 since the orders were in effect. I think it's  
14 perfectly clear that the Japanese have, for example,  
15 withdrawn from all but the very high grade, high  
16 priced merchandise.

17 I think that's true. But if you go back to  
18 2002, 2003 and you look at the data, it is a very  
19 different story, and the most instructive part of the  
20 data is not pricing in the U.S. market where there is  
21 antidumping duty discipline but pricing in third  
22 country markets where the Commission has collected by  
23 year average unit value data, and I would suggest that  
24 those are very, very instructive.

25 VICE CHAIRMAN PEARSON: Yes, but, you know,

1 if we look not just to the period of review, back to  
2 the period of the original investigation, it's hard to  
3 find a surge of subject imports that you had alluded  
4 to. During the POR there's just this remarkable  
5 degree of stability in terms of imports from the world  
6 as a whole.

7 We see a little bit of shifting in import  
8 share from subjects to nonsubjects, but the overall  
9 level of imports to me seems remarkably stable, so  
10 that's why I go back to my point that the domestic  
11 users seem to have some significant preference for  
12 domestic product. Why we would expect in the event of  
13 revocation for domestic users to go running around  
14 looking for some other country to buy from is not  
15 obvious to me.

16 MR. GREENWALD: Well, let me ask you  
17 specifically to turn to the table, I think it's right  
18 in the beginning, the summary table, on imports from  
19 Japan and imports from Korea from 2000 to 2002.

20 VICE CHAIRMAN PEARSON: Yes, I see that.

21 MR. GREENWALD: I mean, it's confidential  
22 information so I can't characterize it here.

23 VICE CHAIRMAN PEARSON: Right. I invite you  
24 to look down at the next category, this total for  
25 subject countries.

1 MR. GREENWALD: Yes, that is true. And you  
2 have an issue there with regard to China.

3 VICE CHAIRMAN PEARSON: Yes, okay. But  
4 unless you're going to argue for decumulation and  
5 handling the countries separately, I don't know that  
6 we can pick and choose here.

7 MR. GREENWALD: Well, no.

8 MR. PURVIS: Mr. Pearson, if I understood  
9 your question specifically, you're searching for a  
10 surge of imports into a marketplace.

11 VICE CHAIRMAN PEARSON: One was alleged  
12 earlier by Mr. Greenwald, and I'm trying to find it.

13 MR. GREENWALD: Well, but here, again, I  
14 mean, if you aggregate -- and this essentially is a  
15 repeat of what happened in the initial investigation.  
16 If you look at 2001, 2002 data for all subject  
17 imports, okay, and look at the volume, that is, well,  
18 again, I don't want to characterize it, and then look  
19 at 2003 data and just look at the volumes of these  
20 imports, you know, it was one of the reasons for which  
21 there was an affirmative determination five years ago.

22 VICE CHAIRMAN PEARSON: Yes, but  
23 unfortunately the Commissioner who was involved in  
24 that is not here to explain it.

25 MR. GREENWALD: But when you look at shifts

1 in imports of subject countries over time, preorder  
2 and postorder, it is dramatic. For the Commission to  
3 say, well, postorder subject imports have been  
4 restrained, I think that's true, but all that says is  
5 the order is working, which it is.

6 VICE CHAIRMAN PEARSON: Okay. Well, as you  
7 know, I've been on red light here for a while and I  
8 would like to thank the Chairman for her indulgence  
9 and advise that I believe I have no further questions.

10 MR. PURVIS: Mr. Pearson, if you'd allow me  
11 a minute? I want to further address this from a  
12 business standpoint. The fact of the matter is we  
13 don't have to have a dramatic increase in physical  
14 exports into our markets to be damaged by this product  
15 being dumped.

16 We see today real time in Latin America  
17 where product has become dramatically more available  
18 from Pacific producers and is entering these Latin  
19 American markets. We're defending our market share.  
20 We're not going to walk away from it. To the best of  
21 our ability, we're going to withstand the pain, lower  
22 the price and maintain our market share in hopes that  
23 things will be better in the future.

24 You know, that's what we've seen  
25 historically in the U.S. We're going to defend our

1 market share as long as we can and hope that it gets  
2 better.

3 VICE CHAIRMAN PEARSON: Okay. Thank you.  
4 Madame Chairman, back to you.

5 CHAIRMAN ARANOFF: Commissioner Lane?

6 COMMISSIONER LANE: I thought maybe we could  
7 attribute the overrun to Commissioner Okun. Mr.  
8 Greenwald, you might be the one to answer this. If  
9 not, you can direct me to the person to do it. Could  
10 you provide any calculations showing what you believe  
11 would be the combined volume and price impact of  
12 subject imports on the domestic industry's financial  
13 position and the effect on employment and the domestic  
14 industry if the orders were revoked?

15 MR. GREENWALD: Sure. Yes, we can do that.

16 COMMISSIONER LANE: You'll do that  
17 posthearing?

18 MR. GREENWALD: We have to do it posthearing  
19 because off the top of my head I don't know.

20 COMMISSIONER LANE: Okay. Fine. And can  
21 you provide any information comparing the U.S. price  
22 for subject PVA to the price in other markets, and in  
23 responding, price information for specific countries  
24 or price comparisons for specific regions, such as the  
25 price in the Asian markets, the European markets and

1 the South American markets, would be helpful.

2 MR. GREENWALD: We can. I would draw your  
3 attention to the staff report that while it does not  
4 have product specific prices does have average unit  
5 value shipment data, export data, from each of the  
6 subject countries to a series of third country  
7 markets. I believe that those data, especially when  
8 compared to the average unit value of domestic  
9 shipments in the U.S. market, are very instructive.

10 COMMISSIONER LANE: Okay. Thank you. Could  
11 you provide a schedule posthearing that provides a  
12 breakdown of your cost of goods sold by raw materials,  
13 labor, process energy and other factory costs and  
14 indicate which of those cost categories you would  
15 consider to be totally variable and which are  
16 generally fixed?

17 If any of the categories would be partially  
18 variable and partially fixed, please indicate your  
19 best estimate of the percentage split between fixed  
20 and variable costs.

21 MR. GREENWALD: Yes, we will do that.

22 COMMISSIONER LANE: Okay. We may have  
23 touched on this question earlier but I want to make  
24 sure I understand the qualification issue. I  
25 understood Mr. Purvis to say in the opening remarks

1 that the idea that the domestic PVA purchasers require  
2 extensive qualification is absurd. Please clarify  
3 what you mean. Are you saying that there are no  
4 qualification requirements at all? If so, is that  
5 true for all grades of PVA, including PVB grade?

6 MR. PURVIS: Commissioner Lane, with respect  
7 to the vast majority of end uses, excluding PVB grade  
8 PVA, there is very little to no barriers to entry for  
9 material from subject countries.

10 As I said in my opening remarks, many of our  
11 customers, probably the majority of our customers,  
12 were once served by producers in subject countries at  
13 one time or another, but these applications are not  
14 horribly sensitive to any sort of variability in  
15 product quality, which there is typically little.

16 In the case of PVB grade PVA, Solutia has  
17 pointed out that much of this product ends up in the  
18 front windshield of your car. Clarity is of critical  
19 importance, and so to have a product that's very low  
20 in color is not included. A low end ash, if you will,  
21 is really important.

22 There's nothing magical about producing PVA  
23 that's low ash and low color. There's no patented  
24 technology that you must own, there's no special and  
25 differentiated PVA production process. It's simple

1 know how. I would think that the PVB industry and the  
2 downstream glass manufacturers are probably, as I've  
3 seen in the industry, the most sensitive to dramatic  
4 changes in quality.

5 COMMISSIONER LANE: Okay. Thank you. Mr.  
6 Greenwald, the prehearing report provides data  
7 regarding the competitive overlap between subject  
8 imports and the domestic like product and the briefs  
9 discuss the factors used by the Commission to  
10 establish a reasonable overlap of competition. Could  
11 you please boil down to your best argument why the  
12 Commission should cumulate subject imports in these  
13 reviews.

14 MR. GREENWALD: Yes. The argument is that  
15 subject imports from all countries -- let me rephrase  
16 that. All subject countries produce and export PVA of  
17 similar qualities and for similar applications. Since  
18 the orders were in effect it is true, for example,  
19 that Japan has exited from lots of lower priced, lower  
20 grade applications and is concentrating on very high  
21 grade, high cost applications.

22 But if you look at the export data from  
23 Japan to third countries you will see that the  
24 Japanese, like every other producer in the world,  
25 produces a full range of PVA for the full range of

1 applications. The overlap of competition in the  
2 global market is beyond dispute, and the only reason  
3 that there is a difference with regard to the U.S.  
4 market is the impact of the orders.

5 Korea has essentially withdrawn from the  
6 U.S. market, Japan has essentially withdrawn from the  
7 U.S. market, China is in the U.S. market but in a very  
8 different way than they were. The legal test for you  
9 is what happens going forward? Will there be a  
10 significant overlap of competition?

11 What I submit to you is that the proof of  
12 that point is in the range of products to third  
13 countries now and in the overlap of competition that  
14 occurred prior to the orders. The staff report shows  
15 that overlap of competition which we submit is the  
16 inevitable consequence of revocation of the orders.

17 COMMISSIONER LANE: Okay. Thank you. I  
18 have another cumulation question. The Commission did  
19 not cumulate subject imports from Japan and Korea with  
20 imports from China for purposes of its final  
21 affirmative threat of material injury determination  
22 regarding imports from Japan in the original  
23 investigations, but the Commission did cumulate  
24 subject imports from Japan with imports from Korea and  
25 China for purposes of the present material injury

1 determination regarding imports from China and Korea.

2 Should this disparate treatment in the  
3 original investigations affect the Commission's  
4 cumulation analysis in this review? Should it affect  
5 our analysis of the likely volume price effects or  
6 impact in this review?

7 MR. GREENWALD: The decision to cumulate  
8 imports from all three in terms of present injury  
9 would, I think, govern, unless there has been a  
10 material change in the fact pattern, what you do going  
11 forward. This is not to say that you are legally  
12 bound to cumulate. You're not.

13 But the analysis that led you to conclude  
14 that there was a significant overlap of competition  
15 and led to a finding of that they should cumulate for  
16 purposes of present injury I think ought to guide your  
17 decision on how you exercise your discretion to  
18 cumulate in the sunset review.

19 COMMISSIONER LANE: Okay. Thank you. In  
20 what major markets is PVA currently the most expensive  
21 to purchase?

22 MR. PURVIS: I would say from our  
23 perspective probably the U.S.

24 COMMISSIONER LANE: In what major markets is  
25 PVA currently the most lucrative to sell? Would that

1 be the U.S.A., too?

2 MR. PURVIS: I think that's fair.

3 COMMISSIONER LANE: Okay. I'm not sure how  
4 much time I've got left, but I'd like to talk about  
5 internal transfers. Okay. I'll wait until either my  
6 next round or the in camera. Thank you.

7 CHAIRMAN ARANOFF: Commissioner Williamson?

8 COMMISSIONER WILLIAMSON: Mr. Purvis, could  
9 you now or in the posthearing describe your exports to  
10 affiliated foreign producers. Where are they shipped,  
11 and in what quantities and what product types.

12 MR. PURVIS: Sure. A couple of different  
13 answers to your question. We do have one small  
14 downstream consumer of PVA within the Celanese  
15 organization. We've shared with you data on the  
16 volume that represents. It's not significant. And so  
17 we do ship to our downstream business. It's an  
18 emulsion polymerization business in Europe  
19 predominantly.

20 We also ship to a separate legal entity, a  
21 Celanese legal entity in Europe, where we merchant  
22 market the product. I think one of your questions was  
23 what's the difference in products that we export?  
24 It's all the same. You know, there's a very similar  
25 mix of products that we're exporting versus what we're

1 selling domestically.

2 COMMISSIONER WILLIAMSON: Like the Chairman,  
3 I'm also interested in your views in which segments of  
4 domestic production compete with subject imports and  
5 which are essentially insulated from competition and  
6 what this means for assessing likely injury by  
7 imports? We've been around this question a little  
8 bit, but maybe you can address it again.

9 MR. GREENWALD: Well, let me just give sort  
10 of a -- from what I can tell for each of the companies  
11 and then they can answer and either agree or disagree.  
12 For Celanese, essentially all of their production  
13 competes potentially with subject imports. That is,  
14 if the order is removed, there are producers in China,  
15 in Japan, and in Korea that, taken together or  
16 individually, offer the same range of products that  
17 Celanese offers.

18 For DuPont, the exception is the captive  
19 production of PVA for their own PVB business, which is  
20 -- we'll give the precise numbers -- I think you  
21 actually have it in the questionnaire response. But,  
22 there is a very substantial portion of DuPont's  
23 business, as well, that is -- competes or would  
24 compete, if the orders were revoked with subject  
25 imports.

1 MR. PURVIS: I don't have anything to add to  
2 that. I agree.

3 COMMISSIONER WILLIAMSON: Okay. So --

4 MS. KORTE: I don't either.

5 COMMISSIONER WILLIAMSON: You don't agree  
6 with --

7 MS. KORTE: I agree with Mr. Greenwald, but I  
8 don't have anything else to add.

9 COMMISSIONER WILLIAMSON: Okay. So,  
10 basically, you disagree with Solutia's argument that  
11 the domestic industry is insulated other than the  
12 captive production?

13 MR. GREENWALD: We disagree with Solutia.  
14 Solutia has got it wrong.

15 COMMISSIONER WILLIAMSON: Okay. I just  
16 wanted to get that clarification.

17 We talked a lot about the force majeure and  
18 things like that. But, this is another Solutia  
19 argument, looking at your operations during the period  
20 under review, is it fair to say that your facilities  
21 essentially produced all the PVA that it could? I  
22 mean, basically, it's been said that really you  
23 couldn't supply anymore. But, I think I heard -- you  
24 know, I was out of the room -- that if Solutia wanted  
25 more that you would provide more.

1 MR. PURVIS: Commissioner Williamson, at the  
2 five-year review period, there's been a lot of changes  
3 in the marketplace, obviously. I think if you look  
4 earlier -- for Celanese, if you look earlier in that  
5 period, perhaps our assets were not fully utilized.  
6 If you look later in the period, they were more fully  
7 utilized. It think their comments -- my comments  
8 about our willingness to sell more product to Solutia  
9 are driven by the economic environment that we see  
10 today and for the foreseeable future, there's plenty  
11 of excess capacity to produce PVA. We would love to  
12 be able to sell more in the domestic marketplace.

13 MS. KORTE: And during the period of review,  
14 our facilities did produce all the PVA that they can.  
15 And while we did have one force majeure event driven  
16 by a hurricane in 2008, there were also times when we  
17 have had small utility outages that did result in  
18 maybe some temporary delays in going to Solutia that  
19 we addressed through expedited modes of transportation  
20 at DuPont's cost. And we'll address those more fully  
21 in the post-conference brief.

22 COMMISSIONER WILLIAMSON: Okay. Thank you  
23 for those answers. I have no further questions, Madam  
24 Chairman.

25 CHAIRMAN ARANOFF: Commissioner Pinkert?

1           COMMISSIONER PINKERT: I have no further  
2 questions in this part of the session. I may have  
3 additional questions for Mr. Greenwald in the in  
4 camera. Thank you.

5           CHAIRMAN ARANOFF: I find myself in the  
6 unusual position of having a number of additional  
7 questions, while my colleagues seem to have mostly run  
8 out. So, I beg all of their indulgence and if they're  
9 lucky, some of these have to be answered in the post-  
10 hearing brief.

11           One of the things that I've wanted to  
12 understand about this industry is a little bit more  
13 about how price competition works. In particular, I'm  
14 used to seeing in industries that have just a few  
15 suppliers and a few large purchasers, who make up at  
16 least a significant portion of demand, very aggressive  
17 bidding of the large domestic suppliers against each  
18 other for contracts for these large customers. And I  
19 don't see anything on the record that tells me whether  
20 or not that is happening here and I don't get the  
21 sense that it is. What can you tell me about the  
22 contracting process for these large customers? Are  
23 DuPont and Celanese usually bidding against each other  
24 or do these companies have just sort of long-term  
25 relationships where they just offer a portion of their

1 requirements to each of you're never really head to  
2 head?

3 MR. PURVIS: Madam Chairman, let me answer  
4 that as it relates to Celanese in two ways. First of  
5 all, specifically as it relates to Solutia, who is our  
6 largest domestic and global customer, we can share  
7 with you some confidential, some business confidential  
8 data in our post-hearing brief that will demonstrate  
9 beyond reasonable doubt that there is extreme  
10 competition, that there is substantial buying power,  
11 purchasing power that exists, given the scale of their  
12 purchase requirements for PVA.

13 With regards to competition outside of  
14 Solutia in the domestic market, the vast majority of  
15 our market is highly fragmented. My average customer  
16 buys 100 or 150 tons of product a year. It's a very  
17 fragmented market. And so, there is much less buying  
18 power across most of the domestic industry than what  
19 we see from purchasers like Solutia. There is  
20 absolutely very active competition in the domestic  
21 market, not only from U.S. producers, but from non-  
22 subject imports that create a very dynamic market and  
23 pricing market environment.

24 MS. KORTE: And from DuPont's perspective,  
25 the contracting process can be anything from a formal

1 request for proposal that comes out from a customer  
2 electronically that Celanese, DuPont, and any other  
3 producers that would want to bid on that can bid on  
4 that business, to just negotiations on a case-by-case  
5 basis with the customers. We always recognize that we  
6 face competition. I can assure the Chairman that we  
7 have not had any instances where we're just locked  
8 into any one supplier and we can address that more  
9 fully -- or to one customer. We can address that more  
10 fully in the post-conference brief.

11 CHAIRMAN ARANOFF: Okay. In a lot of cases  
12 where there are -- you know, a substantial portion of  
13 the market is accounted for by long-term contracts,  
14 which we, in our Commission lingo, define as anything  
15 longer than 12 months, we often will go out and ask  
16 the parties to give us specific contract-by-contract  
17 data. Nobody asked us to do that here and we didn't  
18 come up with the idea ourselves. But, if there is  
19 anything that you can do in the post-hearing brief to  
20 just illustrate that process, I'm really interested in  
21 looking on a customer-by-customer basis at how the  
22 price negotiations take place. There are some  
23 industries where we see, for example, you know,  
24 reverse Internet auctions. There are some industries  
25 where we see that everybody submits a sealed bid and

1 then the customer comes back and says, oh, you're too  
2 high; here's what this other guy is offering me. So,  
3 I am interested in figuring out which of those models  
4 it is or maybe there are multiple models that apply in  
5 this industry, so that we can really understand how,  
6 if imports were to enter the market and offer low  
7 prices, how that would play out.

8 MR. PURVIS: Let me comment on that now. I  
9 think it's safe to say the vast majority of our  
10 contractual customer base has a very, very common  
11 industry pricing mechanism called a meter release  
12 clause. So, these contracts are very, very favorable  
13 to the consumer. They guarantee a certain volume of  
14 supply at a price to be determined in the future.  
15 Typically, under these contracts with meter release  
16 clauses, if an exporter of subject country PVA, if  
17 subject material were to enter the U.S. and go to  
18 Customer A at a dumped price, Customer A would call me  
19 and say, I have the opportunity to buy a product from  
20 someone else at a cheaper price; do you want to meet  
21 that price. To the best of our ability, we would  
22 lower the price to be competitive and keep their  
23 business. That's from a practical standpoint.

24 And back to the other discussion with Mr.  
25 Pearson, oftentimes, what we've seen historically in

1 this market before the orders and what we see in other  
2 export markets today is that we lower prices to be  
3 competitive within the constructs of our contractual  
4 agreements.

5 CHAIRMAN ARANOFF: Okay. My next question  
6 was going to be about meter release clauses, so you  
7 took me there already. How common is it for those  
8 meter release clauses to be invoked? And looking at  
9 the period of review that we're looking at, is there a  
10 difference between periods when prices are generally  
11 rising and periods when prices are declining, which  
12 might be the most recent period and maybe some periods  
13 earlier when prices weren't doing very much?

14 MR. PURVIS: It's very common for the meter  
15 release clauses to be invoked. Obviously, our  
16 industry has an economic cycle like any other, where  
17 supply and demand drive, to a significant extent, the  
18 ability to increase prices. In the more balanced  
19 market environment, you see less meter release clauses  
20 invoked and in an environment like we see today, it's  
21 a dozen phone calls today from different customers  
22 asking for lower prices.

23 CHAIRMAN ARANOFF: And at the point in 2007  
24 when prices were going up like crazy and globally  
25 there was tight supply, you were, in theory, not

1 seeing meter release clauses invoked?

2 MR. PURVIS: Not nearly as much; not nearly  
3 as much.

4 CHAIRMAN ARANOFF: Okay. I have a couple of  
5 questions about the Chinese producers. And I don't  
6 know whether you will have answers to these, but these  
7 are areas where our record is a little bit spotty.  
8 The most recent information that I could cull from the  
9 record, and I think it came out of Solutia's brief, is  
10 that the Chinese Government lowered the VAT tax rebate  
11 on PVA in mid-2007. If anybody has got more current  
12 information about the state of Chinese VAT tax rebates  
13 or any other incentives or disincentives to export  
14 PVA, that would be helpful.

15 MR. GREENWALD: What you're talking about is  
16 a reduction in the rebate, sort of an export  
17 disincentive, if you will.

18 CHAIRMAN ARANOFF: Yes. I mean, my  
19 understanding is that the VAT tax rebate was 13  
20 percent. It was lowered to five percent. I think  
21 that is what is contained in Solutia's brief. That  
22 was mid-2007.

23 MR. GREENWALD: Right, right.

24 CHAIRMAN ARANOFF: A lot has changed in the  
25 world since then.

1           MR. GREENWALD: What China has done is  
2 resisted the appreciation of the RMB in the interim.  
3 And I believe they've rescinded I believe for PVA, but  
4 I don't know that for sure, I will have to check, the  
5 reduction in the VAT tax rebate.

6           CHAIRMAN ARANOFF: Okay. Well, anyone, who  
7 can submit more current information on that would be  
8 helpful.

9           There is also mentioned in the record of an  
10 antidumping case that was brought against Chinese PVA  
11 in the European Union and what I don't understand is  
12 what happened in that case. Are you aware of that?

13          MR. MELTZER: We can provide that to you in  
14 the post-hearing brief.

15          CHAIRMAN ARANOFF: Okay, thank you. And  
16 going back to the pricing questions that I had asked,  
17 as you are going back and trying to give me sort of  
18 more specific information on what's going on in terms  
19 of contracting, in particular in the market, I would  
20 be interested in knowing what long-term contracts are  
21 going to be up for rebid during the rest of 2009 and  
22 into 2010, so we can get a sense of how much of the  
23 market -- how much of the merchant market that is  
24 subject to contracting is open and going to be subject  
25 to bid in which subject imports could participate, if

1 the orders are revoked.

2 MR. GREENWALD: Will do.

3 CHAIRMAN ARANOFF: Okay. Thank you, very  
4 much. One more question going back to this issue of  
5 product quality. A number of purchases responding to  
6 our questionnaire expressed some skepticism about the  
7 quality of Chinese and Korean PVA. And these are not,  
8 by and large, purchasers, who are making PVB. And  
9 what I'm trying to avoid is having a sort of a he  
10 said/she said record, where we have the domestic  
11 producers telling us that these are basically  
12 commodity applications, anybody can serve them, and we  
13 have these purchasers, who aren't here to answer  
14 questions, but did submit questionnaires saying we  
15 just don't think that -- we think there are quality  
16 problems with the Chinese and Korean product. Because  
17 what is not clear to me from the questionnaire  
18 responses is the extent to which those responses are  
19 based on truly recent experience with Chinese and  
20 Korean product versus either experience during the  
21 original period of investigation or maybe just sort of  
22 quoting common knowledge, as they fill out the  
23 questionnaire. So, what I would like to do is ask,  
24 and I ask this to both panels, what information is  
25 available on the record or could be put on the record

1 that is objective, to the extent to which Chinese and  
2 Korean product is of sufficient quality and made in  
3 the right formulations for application in all the  
4 major end uses and aside from PVB, because I  
5 understand that there is a difference there that we've  
6 covered?

7 MR. GREENWALD: Yes, we will do that.

8 CHAIRMAN ARANOFF: Okay. With that, I think  
9 I may have actually exhausted my questions.  
10 Commissioner Lane, do you have further questions?

11 COMMISSIONER LANE: I just have one question  
12 that was triggered by one of your questions. Could  
13 you provide over the period of review what percentage  
14 of your sales are covered by or were covered by long-  
15 term contracts?

16 MR. GREENWALD: You mean this is contracts  
17 for sales going forward or during the full five-year  
18 period?

19 COMMISSIONER LANE: Both. Thank you.

20 CHAIRMAN ARANOFF: Are there anymore  
21 questions from Commissioners?

22 (No response.)

23 CHAIRMAN ARANOFF: Does staff have questions  
24 for this panel?

25 MR. CORKRAN: Douglas Corkran, Office of

Heritage Reporting Corporation  
(202) 628-4888

1       Investigations. Thank you, Chairman Aranoff. Staff  
2       has just one or two very brief questions and they are  
3       to clean up some information that came early in the  
4       questioning. This is for Ms. Korte. With respect to  
5       DuPont, does DuPont utilize a surcharge mechanism?  
6       And if they do, is it similar to Celanese, in that it  
7       only deals with freight rather than raw material or is  
8       there a raw material surcharge?

9                 MS. KORTE: Like Celanese, for the most part,  
10       when energy prices have gone up, we have tried to  
11       utilize just a full industry price increase. During  
12       the period of review, we did have one time and I  
13       believe -- I'll go back and verify it -- but I believe  
14       it was in 2007 or fall of 2006 that we put a temporary  
15       energy surcharge on. However, several months later,  
16       when the energy prices had not fallen, we converted  
17       that and rolled that into the permanent price increase  
18       that was announced subsequent to that.

19                 Let me also clarify, we also have a number  
20       of contracts that have a formulaic price that is based  
21       on both a base price and then an energy component of  
22       the price that will fluctuate. And so from that, to  
23       the extent that that would be considered an energy  
24       surcharge, that is factored into the price.

25                 MR. CORKRAN: Thank you, very much. And one

1 more follow-up question, which was to the extent that  
2 changes in your raw material costs flow through to  
3 your prices, in the case of Celanese, Mr. Purvis  
4 testified that that takes place roughly on a quarterly  
5 basis. Is that similar for DuPont?

6 MS. KORTE: The raw material price increases  
7 come through almost immediately depending on your  
8 overall inventory levels. But to the extent that  
9 we're able to announce and raise price increases, I  
10 agree with Mr. Purvis's answer, that it takes  
11 typically 30 to 60 days. And one of the things that  
12 we're looking for there is to make sure that it's not  
13 just a temporary spike. And so for example, when oil  
14 went to \$147 a barrel in early July, we had just  
15 recently announced a price increase in June of 2008  
16 and we're in the process of implementing it. And so,  
17 we debated back and forth in our business, should we  
18 announce another one. We chose not to and several  
19 weeks later, the price did start to decline. And so,  
20 we never were able to raise the price to try to  
21 recover that July spike of \$147 a barrel and we simply  
22 tried to implement fully our prior price increase.

23 MR. CORKRAN: Thank you, very much, for those  
24 responses. Thank you, Chairman Aranoff. Staff has no  
25 further questions.

1 CHAIRMAN ARANOFF: Mr. Shor, do you have any  
2 questions for this panel?

3 MR. SHOR: I do not, Madam Chairman.

4 CHAIRMAN ARANOFF: Thank you. Okay. Well, I  
5 want to thank this panel for all of your time and for  
6 answering our many questions this morning. This has  
7 been very helpful. Now, normally, at this point, when  
8 we only have two panels, we would take a break for  
9 lunch. However, because we actually have effectively  
10 three more panels to go through today and to try to  
11 get some balance into our day, we're going to invite  
12 the next panel up to give your direct testimony prior  
13 to the lunch break and then come back for questioning.  
14 I know that's not ideal; but from my standpoint, it's  
15 better than taking a lunch break and then having three  
16 more complete panels to get through before we can all  
17 go home. So, I will dismiss the first panel and ask  
18 you to take your seats in the back of the room and  
19 we'll bring up the second panel to start.

20 (Panel dismissed.)

21 MS. ABBOTT: If the second panel will come  
22 forward, we will help you get seated. And Madam  
23 Chairman, all members of the panel have been sworn.

24 CHAIRMAN ARANOFF: Please proceed whenever  
25 you are ready.

1 MR. SHOR: I will start right in by  
2 introducing Mr. Tim Feast of Solutia.

3 MR. FEAST: Good afternoon, Chairman Aranoff  
4 and members of the Commission. My name is Tim Feast.  
5 I am the President of the Saflex Division of Solutia.  
6 Saflex Division produces and purchases polyvinyl  
7 alcohol, PVA. We use PVA to produce PVB, polyvinyl  
8 buterol, resin, and film products. As President, I am  
9 responsible for Saflex's worldwide business  
10 operations.

11 The purpose of my testimony is to explain  
12 the tenuous PVA supply situation that has existed in  
13 the United States for the past two years and the grave  
14 risk it poses to our downstream PVB business. My  
15 remarks will focus on three issues. First, I will  
16 discuss Solutia's position in the PVA and PVB  
17 industries. Second, I will explain why Solutia has  
18 invested in expanding its PVB, but not it's PVA  
19 operation. And thirdly, I will explain the risks  
20 posed by the U.S. PVA supply situation to our U.S. PVB  
21 business and workers.

22 I turn first to a description of Solutia and  
23 its Saflex PVA and PVB businesses. Solutia is a  
24 publicly-traded U.S. corporation headquartered in St.  
25 Louis. We are a global company spun off from Monsanto

1 in 1997 and Solutia consists of four businesses:  
2 Saflex, CP films, nylon plastics and fibers, and  
3 technical specialities. Saflex exists primarily to  
4 produce PVB film. This is a thin, clear adhesive film  
5 used to laminate two pieces of glass together  
6 primarily for automatic and architectural  
7 applications. It is the product that prevents  
8 windshields from shattering in an accident and windows  
9 from breaking or shattering in a storm. And Saflex is  
10 the world's leading manufacturer of this performance  
11 interlayer. Nearly 50 percent of laminated  
12 architectural and automotive glass produced globally  
13 contains Saflex interlayer.

14 We produce PVB interlayer by extruding it  
15 from a mixture of PVB resin and plastic plasticizer.  
16 We produce the PVB resin ourselves and PVA is a key  
17 raw material in this production process. Saflex also  
18 sees and emerging and fast growing application for PVB  
19 film in the production of photovoltaic modules. This  
20 technology uses a PVB interlayer and an encapsulate  
21 for the thin film silicon photovoltaic components,  
22 bonding the glass on which the semiconductor is  
23 deposited to a backing layer and providing benefits of  
24 high durability and efficient process ability. The  
25 thin film photovoltaic market will be a huge market

1 for PVB, both in the United States and Europe, as  
2 these regions seek to reduce both carbon emissions and  
3 their dependence on imported oil. PVB film has  
4 already been selected as the encapsulate of choice by  
5 major players in the thin film photovoltaic industry  
6 and worldwide demand for thin film solar panels is  
7 growing at a rate of 40 percent a year.

8 Solutia produces and distributes its PVB  
9 film products and also PVB resin globally. The  
10 building block to produce PVB is PVA and PVA is the  
11 largest raw material cost in the production of PVB.  
12 Solutia produces PVA in the United States and in  
13 Belgium. Our U.S. plants are located in Springfield,  
14 Massachusetts, and Trenton, Michigan. Solutia does  
15 not sell PVA in the merchant market; rather, we  
16 captively consume all of the PVA we produce to  
17 manufacture PVB resin at those same plants here and in  
18 Belgium. Because our PVB business exceeds our own PVA  
19 production capacity, we purchase large and growing  
20 quantities of PVA to supply both our U.S. and Belgium  
21 resin plants. We buy PVA for our U.S. plants  
22 exclusively from U.S. producers and we buy PVA for our  
23 plant in Belgium from U.S. producers and from  
24 producers in Europe and Asia.

25 PVB resin production is a highly specialized

1 process, which is critical to the successful extrusion  
2 of PVB interlayer. We use PVB resin to produce PVB  
3 film at extrusion plants in the U.S., Belgium, China,  
4 Mexico, and Brazil. Solutia thus manufactures U.S.  
5 PVA into PVB products distributed worldwide. Roughly  
6 half of the PVB resin we produce in the United States  
7 is used here. The other half is exported in the form  
8 or resin for extrusion in our other plants, resin for  
9 sale, or finished PVB sheet.

10           Saflex is our flagship business with  
11 revenues of more than \$800 million and a growth engine  
12 for the entire company. We employ more than 600  
13 people here in the United States. Saflex is our  
14 fastest growing business and a large and growing  
15 contributor to Solutia's profitability. Operating  
16 income has increased every year since 2003. We have  
17 grown the Saflex business and maintained our status as  
18 the market leader through innovation and careful  
19 expansion through investment in new plants. We have a  
20 major PVB technology center in the U.S., which is a  
21 source of innovation and new patent applications every  
22 year. We invested in buying 100 percent ownership of  
23 a joint venture PVB extrusion plant in Mexico in 2006.  
24 We opened a new extrusion plant in Soujo China in 2007.  
25 We opened a third extrusion line in Ghent, Belgium, in

1 the third quarter of 2008 and we opened 12,000 tons of  
2 new PVB resin capacity in Springfield, Massachusetts,  
3 at the end of 2008.

4 Let me now address my second issue, the  
5 argument from DuPont and Celanese that Solutia has not  
6 invested in additional PVA production capacity,  
7 because PVA production is not profitable. This is a  
8 nonsensical argument and both DuPont and Celanese know  
9 it. There are three reasons why we have invested in  
10 expanding our PVB resin and film capacity and not our  
11 PVA capacity.

12 First and foremost, our strategic goal is to  
13 grow the overall PVB business. The only way we can do  
14 that is by growing sales of PVB and by expanding PVB  
15 resin and film capacity. Producing more PVA will not  
16 increase our revenues. It will merely substitute  
17 captive production for external purposes. Were we to  
18 divert limited capital to PVA expansion, we would have  
19 to sacrifice investments in PVB and would lose the  
20 ability to meet growing demands for our PVB sheet.  
21 The result would be business lost principally to our  
22 two Japanese PVB competitors.

23 Second, the economic scale for a PVA plant  
24 is approximately 40,000 metric tons or some 90 million  
25 pounds. We do not have a demand for that much PVA in

1 the U.S. To build and operate a new plant at  
2 efficient scale, we thus would have to enter the  
3 merchant PVA business. This would divert significant  
4 resources and management focus away from our core  
5 strategic objectives.

6 Thirdly, Solutia is a world leader in PVB  
7 technology. This is not the case in PVA. We would  
8 certainly need to invest significant time and effort  
9 in updating our own PVA technology before investing in  
10 a new world scale plant and our limited technology  
11 resources and investment capital are better spent to  
12 allow us to do more of what we do best. I would also  
13 note that from a business perspective and an economic  
14 perspective, we certainly consider our PVA operations  
15 to be profitable. We purchase raw materials to  
16 produce PVA and then we combine PVA with other raw  
17 materials to produce PVB in an integrated production  
18 operation. We sell the resulting PVB at a profit. We  
19 do not understand how DuPont and Celanese can contend  
20 that our PVA production should be regarded as  
21 unprofitable and our PVB production correspondingly  
22 more profitable. The PVA we produce is perfectly  
23 suited to our PVB production operations and to us is  
24 more valuable than the PVA purchase and cannot use in  
25 the same production line. We don't have to order it.

1 We don't have to move it. We don't have to worry  
2 about security of supply or the manufacturer changing  
3 its specifications. If it did not have a higher  
4 value, we simply would not produce it.

5 I will now turn to my final topic, the  
6 tenuous U.S. PVA supply situation and the intolerable  
7 risks it poses for our U.S. PVB business. I spoke  
8 earlier about the growth in our PVB business. Because  
9 our own PVA production capacity limits have been  
10 reached, we have been purchasing increasing quantities  
11 of PVA for both our U.S. and European resin plants  
12 from U.S. producers, DuPont and Celanese. Demand for  
13 Saflex product was very strong in 2007. It grew in  
14 2008 and in spite of the economic downturn, is  
15 expected to remain strong in 2009. In light of our  
16 global diversification, our demand for PVA is not  
17 driven solely by developments in the U.S. market. We  
18 experienced some weakness in the automotive and  
19 architectural markets in the U.S. in 2008, but this  
20 was counterbalanced by growth in the architectural  
21 market in Europe and growth in both the automotive and  
22 architectural markets in China. But our ability to  
23 meet the growing needs of our customers in 2007 and  
24 2008 was placed in jeopardy by the inability of DuPont  
25 and Celanese to meet their contractual commitments to

1 supply us with the quantities and specifications of  
2 PVA we required.

3 My colleague, Mike Berezo, will discuss the  
4 details of some of the supply problems we experienced.  
5 The conduct of DuPont in 2007 in refusing to meet that  
6 contractual commitments was, in my view, particularly  
7 outrageous. The bottom line is this. For months at a  
8 time in 2007, for all of 2008, and even today, we  
9 could not and cannot obtain from U.S. producers the  
10 full quantities of PVA we wanted at the specifications  
11 we wanted. We came perilously close at times to  
12 having to shut down our own production lines and  
13 layoff our own U.S. workers, because DuPont and  
14 Celanese could not meet the demand, demand they had  
15 contracted to supply. But the risks to our business  
16 extend beyond the risk to our ability to maintain  
17 continuous production operations. They are the slow-  
18 acting corrosive impacts on our production  
19 efficiencies and product quality that harm our  
20 business over the long term.

21 I heard from DuPont and Celanese this  
22 morning that their production problems are behind  
23 them, demand is now soft, and they have plenty of  
24 capacity to meet the needs of the U.S. market for the  
25 foreseeable future. Well, I've heard that story

1 before. More importantly, you've heard that story,  
2 too. You heard it five years ago in the original  
3 investigations and you heard it more recently from  
4 Celanese in their petition against Taiwan. It proved  
5 to be at best wishful thinking and at worst, a  
6 deliberate distortion of reality. The production  
7 problems always turn out to be more serious than they  
8 first admit, the outage is longer, and the frequently  
9 higher. And while demand may be down this quarter, it  
10 will also return and increase in the foreseeable  
11 future and we will be right back in the mess we were  
12 in, in 2007 and 2008.

13 Yes, there is considerable economic  
14 uncertainty today and no one knows what the depth or  
15 duration of the recession will be. But, I do not have  
16 the luxury of just worrying about tomorrow or next  
17 quarter and neither should this Commission. I have to  
18 plan and manage my business not just for the current  
19 downturn, but also for the inevitable upturn. The  
20 prospects for PVA are strong. We have no doubt that  
21 the demand for PVB will resume its growth in the U.S.  
22 and worldwide, as will demand in other PVA  
23 applications. We want to grow with the architectural  
24 and automotive laminated glass markets and we want to  
25 be able to serve the photovoltaic market, to help this

1 country and others meet their energy needs and reduce  
2 greenhouse gas emissions. Our workers are union  
3 members and earn good salaries. The question is,  
4 where will that growth go? Here or to our PVB  
5 competitors in Japan?

6 We are a global company. When we consider  
7 our next PVB resin expansion, one of the primary  
8 considerations would be the availability and security  
9 of PVA supply. Those jobs can go there or they can go  
10 to Europe and China. The antidumping orders will,  
11 without a doubt, be a factor we consider.

12 Thank you for your time and consideration.  
13 I would now like to introduce my colleague, Mike  
14 Berezo.

15 MR. BEREZO: Good afternoon, Chairman Aranoff  
16 and members of the Commission. My name is Michael  
17 Berezo. I have worked in the chemical's industry for  
18 some 27 years in a wide variety of capacities. Since  
19 October 2007, I've been Vice President of Global  
20 Procurement, Solutia. I am responsible for some three  
21 billion dollars in annual procurement operations  
22 worldwide, including raw materials, energy, logistic  
23 services, covering all of Solutia's businesses.

24 As Timothy has noted, Solutia produces  
25 polyvinyl alcohol at plants in the United States and

1 in Belgium. I am responsible for securing the  
2 precursor raw materials for those production  
3 operations, which principally comprise VAM and  
4 ethanol. We also produce PVB resin at those plants,  
5 using both PVA we produce and PVA we purchase. I am  
6 responsible for those PVA purchases. My testimony  
7 today will address four issues. First, I will spend a  
8 few minutes discussing the qualities that  
9 differentiate different types of PVA. Second, I will  
10 explain the structure of the U.S. PVA industry.  
11 Third, I will discuss the problems we have had in  
12 maintaining the security supply of PVA to our PVB  
13 operations in the United States. And, finally, I will  
14 discuss the current market trends for PVA, including  
15 demand, cost, and pricing.

16 First, what differentiates one type of PVA  
17 from another? The building block needed to produce all  
18 PVA is vinyl acetate monomer, VAM. VAM accounts for  
19 roughly two-thirds of the cost of production of PVA.  
20 VAM must be polymerized into an acetate and then  
21 hydrolyzed. But, different technologies are available  
22 for these processes. Solutia uses an ethanol-based  
23 process. DuPont and Celanese use a methanol-based  
24 process. The particular technology used affects the  
25 physical characteristics of the PVA produced. This is

1 one of the reasons why the PVA we produce, ourselves,  
2 differs physically from the PVA we purchase and why we  
3 use distinct PVB resin lines for purchase of PVA in  
4 our self-produced PVA. That the product we purchase  
5 is undisputably a different product than the one we  
6 produce ourselves also underscores why the value of  
7 purchased PVA is not a proper indicator of the value  
8 to us of our own captively-produced and consumed PVA.

9 Different end use applications of PVA  
10 require different specifications for PVA. For  
11 example, when PVB is laminated in glass, it needs to  
12 be clear without imperfections. It also needs to  
13 laminate well and thus have good processing  
14 properties. And to achieve these properties in PVB we  
15 produce and to optimize the efficiency of our PVB  
16 production processes, we require PVA with a specific  
17 hydrolysis level, the correct molecular weight, the  
18 correct molecular weight distribution, low residual  
19 methanol content, and finally low ash and low iron,  
20 which affects color.

21 Our first requirement for potential PVA  
22 supplier is that they meet these physical  
23 specifications on a consistent basis. We require a  
24 time consuming and expensive pre-qualification process  
25 for all potential suppliers that generally take six to

1 12 months. U.S. PVA producers can all meet these  
2 requirements, because PVB production is the largest  
3 PVA application in the United States, accounting for  
4 some 40 percent of the market. Most PVA producers  
5 elsewhere in the world, however, cannot meet our PVA  
6 requirements, generally because the products are too  
7 high in color, the level of hydrolysis is unsuitable,  
8 or the residual methanol content is too high. They  
9 produce PVA geared to dominant local uses, such as  
10 venalolon fibers and textile sizing in China.

11 Let me next turn to the structure of the PVA  
12 industry. This is a highly concentrated industry with  
13 only three producers: Celanese, DuPont, and Solutia.  
14 Solutia is the smallest of the three. As Tim  
15 mentioned, we can consume all of the PVA we produce to  
16 produce PVB. We do not sell PVA in the merchant  
17 market. We are a major purchaser of PVA in the U.S.  
18 market.

19 DuPont produces and sells both PVA and PVB.  
20 Its PVA produce line is limited, as it can only  
21 produce PVA within a limited hydrolysis and viscosity  
22 ranges. A bigger problem from our perspective is that  
23 it captively consumes a large portion of its PVA  
24 production to produce PVB resin and PFB film and it  
25 competes with Solutia in those markets. Indeed,

1 DuPont is one of our principal global competitors in  
2 the PVB market. It's far from ideal to be dependent  
3 upon a principal competitor.

4 Celanese is the largest U.S. producer of  
5 PVA. It has a full product line and it's the market  
6 leader and the price leader. Celanese does not  
7 compete in the downstream PVB market. However,  
8 Celanese is not focused only on the U.S. market. It  
9 exports to Solutia in Belgium and our peer's data  
10 shows it exports to Germany, Italy, Latin America, and  
11 China, among other countries.

12 In sum, without the option of imports, a  
13 U.S. PVA purchaser has a choice of at best two  
14 suppliers and for certain products, only one supplier.  
15 And for Solutia, which produces PVB resin and film,  
16 one of those two potential suppliers is also our  
17 principal competitor. This is a purchasing nightmare  
18 scenario and a scenario that came to pass in both 2007  
19 and again in 2008, as I will discuss next.

20 A mandatory requirement for Solutia as a  
21 purchaser is security of supply. There is no  
22 substitute for PVA and PVB. We simply cannot risk the  
23 shutdown of a PVB plant due to a PVA supply  
24 disruption. We, therefore, require multiple suppliers  
25 and purchase PVA for PVB production under long-term,

1 multi-year contracts. We do not and cannot switch  
2 suppliers based on short-term price differences of PVA  
3 for our U.S. operations from U.S. producers. A supply  
4 chain extending to China, Japan, or Korea is, by  
5 definition, much longer and less reliable. Neither  
6 DuPont nor Celanese has added new production capacity  
7 since the orders and none, to my knowledge, has any  
8 plans to increase production capacity. Any increases  
9 that have occurred have been incremental and have come  
10 about by optimizing the use of existing capacity.

11 Because the demand for PVA in the U.S. has  
12 grown since the orders and will grow again in the  
13 future, demand inevitably will exceed the capacity of  
14 the U.S. industry to reliably meet it, making imports  
15 necessary to provide security of supply. From my  
16 vantage point, that limit was reached both in 2007 and  
17 then again in 2008. I am not talking about the point  
18 at which apparent consumption reaches some theoretical  
19 or nameplate capacity figure that is calculated for  
20 the purposes of responding to a Commission  
21 questionnaire. Theoretical capacity is only  
22 meaningful if a producer carefully and adequately  
23 maintains its plants and can continuously and reliably  
24 operate at that level without outages or breakdowns.  
25 I'm talking about effective run time, a level that

1 form a purchaser's perspective is reached and exceeded  
2 when suppliers place you on allocation; when they tell  
3 you, you can't increase your volumes; when they tell  
4 you, you can't produce your product; and when you put  
5 your own operations in jeopardy due to supply  
6 problems. It is a level that is exceeded when you no  
7 longer have confidence in the security of your  
8 domestic supply. That's the point we've already  
9 reached and that's why we are here before you today.

10 The details of our varied and increasing  
11 supply problems with both DuPont and Celanese are set  
12 forth in our pre-hearing brief. Many are confidential  
13 and, thus, I'm not at liberty to repeat them. But, I  
14 will highlight two incidents that are a matter of  
15 public record.

16 First, in June 2007, Celanese experienced a  
17 problem at its acetic acid plant in Clear Lake, Texas.  
18 Celanese placed Solutia on a 20 percent PVA allocation  
19 for five months. That means they refused to supply us  
20 with 80 percent of our contract volumes. They did not  
21 offer any alternative source of supply. They made  
22 their problem our problem. We then went to DuPont to  
23 cover the shortfall, with whom we also have a long-  
24 term supply contract. We ran into supply problems  
25 with DuPont, as well, as discussed in our brief.

1 Next, on September 28, 2008, DuPont declared force  
2 majeure. Like Celanese before, DuPont responded by  
3 placing Solutia on allocation at a level of 90  
4 percent. This allocation lasted throughout the fourth  
5 quarter of 2008 and in my testimony, I would say that  
6 it continues to this day. I just discovered that the  
7 force majeure has been ended. I had not been notified  
8 of that and so I am happy to hear about it. Like  
9 Celanese, DuPont had not attempted to find alternative  
10 supply during the time of the force majeure or  
11 otherwise make good on their contract. They, too,  
12 have made their problem our problem.

13 This supply situation fails to meet anyone's  
14 definition of security supply. It is intolerable to  
15 Solutia as a purchaser. It puts our PVB business at  
16 risk and it jeopardizes the jobs of our 620 U.S.  
17 Saflex employees. I'm not a lawyer and I don't  
18 pretend to understand antidumping laws. I'm also not  
19 an economist. I'm a buyer and my responsibility is to  
20 obtain an assured supply of PVA to run Solutia's  
21 Saflex PVB businesses. When I sign a contract with  
22 DuPont or Celanese, I expect them to deliver. If they  
23 have a problem, I'm really not interested in the  
24 reasons. I need to keep my plants running. If I'm  
25 put on allocations for two years straight and cannot

1 get the products I need, then there is a problem of  
2 supply in the U.S. market, end of story.

3 U.S. producers cannot reliably meet demand.  
4 That was a problem in 2007. It was a problem in 2008.  
5 And it's a problem that can only get worse when U.S.  
6 demand resumes its growth trajectory. We simply must  
7 have access to additional import supply, if we're to  
8 maintain and grow our PVB business in the United  
9 States and that supply must include China. Let me  
10 explain why.

11 First, you may ask why we can't rely on  
12 supply from countries not subject to the antidumping  
13 orders. Well, we tried. One producer in Germany is  
14 focused on the capacity short European market and is  
15 no position to supply our growing needs. One producer  
16 in Singapore likewise does not have capacity. Taiwan  
17 has the capacity. It has increased exports to the  
18 U.S. dramatically since the orders. Taiwan sells in  
19 the U.S. through DuPont and through Perry Chemical.  
20 We examined the product, but there are quality issues  
21 that need to be resolved. In addition, we have  
22 concerns due to the fact that they are an expanding  
23 PVB producer and, thus, a downstream competitor like  
24 DuPont. Finally, with respect to Korea and Japan,  
25 when demand is strong, all their capacity is used to

1 supply higher-priced markets in Asia and Europe.

2           What we really need is a contingency plan,  
3 multiple suppliers to whom we can look when there is a  
4 supply issue in the United States. China is the only  
5 realistic option for the long-term future of supply,  
6 because there are a dozen or so of different  
7 producers. Domestic producers are our first choice  
8 for the reasons I mentioned. But as events have  
9 shown, we need a backup plan and China is hardly the  
10 threat DuPont and Celanese make out in their brief.

11           First, the Chinese industry is focused on  
12 its huge and growing domestic demand and is not export  
13 oriented. The trade data show that the United States,  
14 that's DuPont and Celanese, export more PVA than China  
15 and in most years of the period of review, China was a  
16 net importer.

17           Second, plants that have been built in  
18 recent years have been built to meet growth in Chinese  
19 domestic demand or to replace high polluting settling  
20 technology plants that have been dismantled. Supply  
21 was tight worldwide in 2007 and 2008, as Celanese and  
22 DuPont emphasized to us repeatedly during our  
23 negotiations last year.

24           This brings me to the final issue I wish to  
25 address: trends in U.S. demand in pricing and the

1 increasing need for subject imports as an alternative  
2 source of supply to unreliable domestic producers.  
3 U.S. demand for PVA has increased since the orders  
4 were put in place and all projections, including our  
5 own, are for continuing growth. The CEH report  
6 projected 2.2 percent annual growth over the period  
7 2006 through 2011, led by four percent growth in PVB  
8 applications. The SAI report projected higher growth.  
9 Our own demand projections were provided  
10 confidentially. We see large demand growth in PVB in  
11 existing laminated glass applications and in nascent  
12 thin film photovoltaic applications. We also see  
13 opportunities for PVA in new applications that you  
14 heard from Celanese about in their testimony,  
15 including replacement for styrenebutadiene latex in  
16 paper production and water-based coatings.

17 Demand growth will only worsen the supply  
18 situation that's already been tenuous. We recognize  
19 that the U.S. economy is in a midst of a serious  
20 recession and today, in January 2009, there is no  
21 question that demand for PVA is down over last year's  
22 worldwide. Automakers have announced temporary  
23 shutdowns and the environment is uncertain. But,  
24 we're in the business for the long term. Just as we  
25 must plan beyond the next month or year, so we urge

1 the Commission to consider not just the current  
2 downturn, but the eventual upturn when demand recovers  
3 and we return to supply problems we saw in 2007 and  
4 2008. In any event, we do not share the sky is  
5 falling forecast you've heard from DuPont and Celanese  
6 this morning.

7           The critical point in understanding the  
8 health of the PVA industry in the context of the  
9 current business cycle downturn is that while volumes  
10 are down a bit, prices have remained high and profit  
11 margins are likely increasing. Our own purchases of  
12 PVA are down only slightly from 2008 levels, in terms  
13 of volume, but the prices we're paying are higher.  
14 That's right, we pay more per pound now in the first  
15 quarter of 2009 than we paid in the fourth quarter of  
16 2008 and we paid substantially more in the fourth  
17 quarter of 2008 than we paid in the fourth quarter of  
18 2007. In November and December 2008, at the end of  
19 the fourth quarter, in which DuPont and Celanese would  
20 have you believe the market collapsed, we signed new  
21 multi-year contracts with each of them, with minimum  
22 volume requirements and with prices higher than we  
23 paid in 2008. We knew demand was declining, but we  
24 know there will be a recovery and we bet our money on  
25 it.

1                   But beyond declining volumes, consider  
2                   prices and profitability in assessing current  
3                   conditions. Based on our own experience, we believe  
4                   Dupont's and Celanese's PVA margins are likely stable,  
5                   if not improving. As I noted earlier, VAM represents  
6                   nearly two-thirds the cost of PVA. One way to  
7                   estimate the trend and profitability of PVA is to  
8                   track the spread between VAM prices and PVA prices,  
9                   both of which I purchase. VAM prices peaked in the  
10                  third quarter of 2008 and by the first quarter of  
11                  2009, had dropped by half. PVA prices have not  
12                  dropped by anything close to that, if at all. As  
13                  noted, we're paying more. With input cost collapsing,  
14                  the spread between VAM and PVA prices is increasing.  
15                  In short, the sky is hardly falling.

16                  That concludes my testimony. I would now  
17                  like to introduce Richard Boltuck.

18                  MR. BOLTUCK: Thank you. Good afternoon. I  
19                  am Richard Boltuck, Senior Advisor, CRA International,  
20                  and I welcome the opportunity to appear before the  
21                  Commission on behalf of Solutia. I have been asked by  
22                  counsel to review the most significant economic  
23                  factors bearing on whether the U.S. PVA industry would  
24                  be harmed by expiration of the orders against imports  
25                  from China, Japan, and Korea. The record evidence in

1 this case supports the following conclusions.

2 First, economic substitutability between the  
3 subject imports and the like product is extremely  
4 limited by several compelling factors that restrict  
5 competition to a small sliver of U.S. production.

6 Second, any increase in subject imports were  
7 the orders to expire would likely displace non-subject  
8 imports to a substantial, perhaps overwhelming extent,  
9 thereby insulating U.S. producers from competitive  
10 harm. To whatever extent in increase in subject  
11 imports is not fully offset in this way, U.S.  
12 producers have demonstrated an ability to avoid  
13 harmful competition in the U.S. market by selling PVA  
14 in attractive overseas market.

15 Third, in managing its PVB operations,  
16 Solutia has encountered unreliable PVA supply in the  
17 United States and until very recently, at least,  
18 DuPont has had Solutia on allocation. This situation  
19 threatens current PVB production and workers employed  
20 in those operations and is likely to grow more  
21 challenging as Solutia grows its downstream operations  
22 in the future.

23 Fourth, the financial data before the  
24 Commission are flawed and understate the true economic  
25 performance of the U.S. industry. Still, these data

1 point to strengthening performance towards the end of  
2 the POI that cannot be associated with the advent of  
3 the orders, but leave the U.S. industry much less  
4 vulnerable to injury. Evidence indicates the profit  
5 margins have increased right through the end of 2008.

6 Now for the details. First, the economic  
7 substitutability is extremely limited. Without  
8 disclosing actual shares, a much greater proportion of  
9 U.S. PVA production is insulated from any competition  
10 with subject imports than in the vast majority of  
11 investigations the Commission has considered. A large  
12 share of U.S. production is transferred captively for  
13 use in integrated downstream PVB production and does  
14 not compete with subject imports. A large share of  
15 U.S. production is successfully exported to an  
16 established customer base overseas and these sales  
17 contribute to the performance of the U.S. industry as  
18 a whole, but do not compete with subject imports  
19 within the U.S. market. Finally, subject imports  
20 compete in only a small segment of end uses that  
21 compete directly with U.S. production, principally in  
22 the paper industry and textile sizing segments that  
23 are relatively static or declining, whereas the U.S.  
24 PVB market for PVA is likely to grow.

25 Significantly, no producers in subject

1 countries supply the U.S. PVB industry, which the  
2 staff has identified as the most import single end use  
3 in the United States. As the Commission's record  
4 confirms, purchasers universally require a lengthy  
5 qualification process. Such significantly limited  
6 economic substitutability is important in evaluating  
7 the effect of any hypothetical increase in subject  
8 imports on U.S. producers. The Commission has long  
9 recognized that the lower the degree of  
10 substitutability, the smaller is any adverse  
11 competitive effect. And, here, that effect is small,  
12 indeed.

13 Second, any increase in subject imports  
14 consequent to expiration of the orders is likely to  
15 substantially displace a similar volume of imports  
16 from non-subject countries, thus insulating U.S.  
17 producers. The best evidence of what will happen if  
18 the orders end is what actually did happen when the  
19 orders were put in place. The data are confidential,  
20 but I urge the members of the Commission to examine  
21 Table 1-1 of the staff report carefully, look at the  
22 U.S. producers' U.S. shipments. To what extent did  
23 they increase, if any, from 2002 to 2003, as the  
24 orders took effect? Look at the U.S. producers' share  
25 of the U.S. market from 2002 to 2003. Did it increase

1 significantly? To what extent is any increase  
2 explained by greater U.S. shipments and to what extent  
3 by a change in the size of the U.S. market? Look at  
4 the longer term effects. To what extent does the U.S.  
5 producers' share of the U.S. market in 2007 exceed its  
6 share in 2002? Given any change in the amount of  
7 consumption in 2003 over 2002, to what extent did  
8 increased imports from Taiwan and other countries  
9 increase as the volume of subject imports decreased?

10 Celanese and DuPont, in their brief, argue  
11 that displacement is irrelevant, that the test ought  
12 to be based on a pricing analysis. I will address  
13 aspects of this claim in the in-camera session, but  
14 the bottom line of this approach ought to be whether  
15 the orders permitted the U.S. producers to raise their  
16 prices. The Commission should focus on the pricing  
17 data before the orders took effect and for the couple  
18 of years following imposition, data which are depicted  
19 graphically on page 47 of Solutia's brief and draw  
20 from the original and current investigations. These  
21 comparisons are possible because the same products  
22 were defined in both investigation.

23 Celanese and DuPont admit that in the wake  
24 of the orders, they were unable to recover higher  
25 costs through higher prices. And, yet, since the

1 orders, if effective, operate to enhance this revenue,  
2 this failure is strong evidence that the orders were  
3 ineffective. Contrary to protestations throughout  
4 their brief, it is a highly reasonable economic  
5 inference that elimination of the orders would  
6 similarly have no apparent effect on the industry's  
7 success in the U.S. market and that result is  
8 explained, in large part, by the offsetting changes  
9 induced in imports from non-subject countries. The  
10 record lacks any reason to doubt that if the orders  
11 were removed, to whatever extent subject imports  
12 increased, the process evident when the orders took  
13 effect would substantially reverse itself, including  
14 an induced offsetting change in the volume of non-  
15 subject imports. Moreover, an examination of the  
16 official national PVA export data for Taiwan, the  
17 largest non-subject supplier, shows that in 2007, it  
18 exported 46 times more PVA than it shipped to the U.S.  
19 market to countries other than the United States.  
20 This is important because it confirms the ease with  
21 which Taiwan could divert its U.S. shipments  
22 elsewhere, were the orders to expire.

23 Similarly, U.S. producers are further  
24 insulated from harm because their access to  
25 established overseas export customers mean that they

1 may increase export shipments in response to any  
2 increased competition within the U.S. market. As the  
3 staff noted in its discussion of the U.S. producers'  
4 elasticity of supply to the U.S. market, "supply  
5 responsiveness is enhanced by a large amount of  
6 exports." This ability is especially apparent when  
7 one considers just how limited the direct competition  
8 with subject imports actually is, as I discussed a  
9 moment ago. Moreover, any shift of subject imports to  
10 the U.S. market would raise PVA prices in markets  
11 outside of the United States, thereby improving U.S.  
12 industry performance on its export sales and to that  
13 extent, offsetting any effects within the U.S. market.

14 Third, Solutia seeks to increase its  
15 multiple sourcing of PVA, in order to secure more  
16 reliable supply availability. As Michael Berezo  
17 explained, Solutia has encountered serious difficult  
18 obtaining the PVA products it needs to keep its PVA  
19 operations running and is currently or until very  
20 recently on allocation by DuPont. Solutia naturally  
21 seeks to alleviate this trouble by multiple sourcing,  
22 which means qualifying a foreign supplier.

23 Significantly, as photovoltaic and other new PVA  
24 applications take off and the global PVB and resin  
25 industry expands in future years, growing U.S. PVB

1 resin production are likely to require volumes of PVA  
2 that simply exceeds suitable U.S. PVA capacity.  
3 Continuation of the orders actually places expansion  
4 of PVB production in the U.S. in jeopardy, in light of  
5 perspective offshore venues that don't face similar  
6 sourcing impediments. These futures of competition in  
7 the evolving market ought to be considered in  
8 evaluating the utility of these orders.

9 Fourth, the U.S. PVA industry's financial  
10 data are flawed and understate the industry's true  
11 economic performance over the POR. I will explain why  
12 in detail in the in-camera session. But, this  
13 conclusion is significant, as the Commission assesses  
14 the performance of this industry within the context of  
15 the business cycle. Moreover, as I will discuss in  
16 the closed session, while the magnitude of profits is  
17 understate, the trends are still likely meaningful and  
18 the pattern of reported profits during the POR shed  
19 light on whether the orders were effective in helping  
20 the industry or whether the industry is increasingly  
21 or decreasingly vulnerable by the end of the POR.

22 I would also note that while Celanese and  
23 DuPont stress the effect of the recession on sales  
24 volume in the final months of 2008, they do not report  
25 their fourth quarter profitability. Michael Berezo,

1       however, has testified that through the end of 2008,  
2       the PVA-VAM margin, based on the ratio of PVA prices  
3       Solutia pays in the market to commodity VAM costs,  
4       continued to increase. This margin is widely used in  
5       the industry as a metric of profitability, since VAM  
6       accounts for roughly two-thirds of the cost of PVA  
7       production and it's all the more relevant, given the  
8       importance of PVA production as an end use in the U.S.  
9       PVA market. So while volume has inevitably been  
10      affected by the recession, profit margins appear to be  
11      holding up well and even likely increasing through the  
12      fourth quarter.

13               Finally, I have noticed that Celanese and  
14      DuPont stress increasing PVA capacity in China. An  
15      overwhelming share, over 90 percent of China's PVA  
16      production is dedicated to serving its rapidly growing  
17      home market. As a corollary, the PVA grades in which  
18      Chinese producers specialize are geared for end uses  
19      that have actually been contracting for many years in  
20      the United States. In addition, the recent sharp  
21      reduction of the VAT rebate in China for exports of  
22      PVA and other products also has increased the cost of  
23      exporting. These facts hardly argue in favor of the  
24      conclusion that Celanese and DuPont urge the  
25      Commission to reach with respect to Chinese capacity.

1 I would be pleased to answer any questions  
2 at the appropriate time. Thank you.

3 MR. SHOR: Chairman Aranoff, that concludes  
4 our affirmative public presentation.

5 CHAIRMAN ARANOFF: Okay. Let's not send  
6 anyone into shock by not having their lunch. We will  
7 take a lunch break now. And, let's see, it is 10  
8 after 1:00. We will resume at 2:00 with the  
9 questioning of this panel. Please be reminded that  
10 this room is not secure. You shouldn't leave any  
11 confidential information behind in this room  
12 unsupervised. So, we will go into recess until 2:00.

13 (Whereupon, at 1:10 p.m., the hearing was  
14 recessed, to reconvene at 2:00 p.m. this same day,  
15 Tuesday, January 27, 2009.)

1 econometric techniques to estimate elasticities of  
2 substitution. But you need longer time series  
3 typically than are available in ITC investigations,  
4 even with the extended review investigation. The data  
5 points are too few for that purpose.

6 But the method that's been used consistently  
7 since the late 1980s at the ITC itself, and recalling  
8 that the staff estimates elasticities of substitution  
9 in every case and obtains comments on them from the  
10 parties, is looking at the underlying basic building  
11 blocks that are universally understood by economists,  
12 for instance, to influence the degree of  
13 substitutability.

14 So, for instance, one can look at product  
15 differentiation, at long term contracting, at internal  
16 consumption, at other factors that insulate some  
17 production from direct competition such as exporting;  
18 and also the evidence that the purchasers provide  
19 regarding their concerns about product quality and  
20 consistency, reliability, multiple sourcing, and the  
21 like.

22 So one has to look at that in the case  
23 specific context, comparing it to the experience that  
24 the Commission has with prior investigations. Those  
25 tend to be qualitative factors that allow you to say,

1 is the substitutability more or less than we  
2 encountered in prior cases where they were less true?

3 So it's an empirical approach, but it's an  
4 approach that relies upon understanding the factors  
5 that influence substitutability and identifying them  
6 specifically as part of the investigation.

7 COMMISSIONER PINKERT: I appreciate that,  
8 and I thank you. You heard the testimony earlier  
9 today with the Petitioners' panel. You might remember  
10 that I specifically asked about the claims that the  
11 competition is limited by factors such as end use,  
12 product mix, quality, and purchaser qualification; and  
13 you heard the response I got earlier today.

14 So I guess what I'm trying to get at right  
15 now is, how am I supposed to sort out the different  
16 perspectives on this limited competition issue?

17 MR. BOLTUCK: Well, I mean, I think one  
18 thing to do is to understand that those urging  
19 retention of the orders have an interest in  
20 emphasizing or arguing in favor of a higher degree of  
21 substitutability, rather than a lower degree of  
22 substitutability. So the credibility is probably  
23 colored by that interest.

24 But ultimately, my advice or my suggestion  
25 would be to look at the uncontroversial underlying

1 evidence. So in other words, no one can dispute what  
2 share of domestic production is exported and is  
3 protected from competition with the imports, what  
4 share is captively produced; and put that in the  
5 context judgmentally of your experience with prior  
6 cases in other products.

7 So I don't think, in the end, as a  
8 Commissioner, you can depend on either what I say as a  
9 bottom line conclusion on substitutability, or what  
10 the other side says. But you do need to look at the  
11 factors that I've raised, that they've raised; and  
12 place it in the context of the whole history of your  
13 experience with other industries.

14 COMMISSIONER PINKERT: Thank you; turning to  
15 Mr. Berezo, I recall that in your testimony, you  
16 talked about how it's not desirable to be dependent  
17 upon a competitor for purchasing inputs. I'm  
18 wondering whether there was every any tie, any  
19 connection, between the allocation that Solutia was  
20 put on and your status as a competitor with Dupont.

21 MR. BEREZO: I don't think I could say that,  
22 no.

23 COMMISSIONER PINKERT: Is there any other  
24 anecdotal information or any other evidence that you  
25 could present to us that would demonstrate that you

1 had a legitimate fear of sourcing from a competitor?

2 MR. BEREZO: Well, certainly; I mean, I  
3 don't know what sort of documentation, you know, would  
4 support that. But it's just logical to think that.  
5 You know, we're competitors downstream. To the extent  
6 that you've got to manage your own business and take  
7 care of your own interests, it just would seem logical  
8 that that may be factor in consideration. But I don't  
9 have any documentation or anything beyond that, no.

10 MR. SHOR: Commissioner Pinkert, there is  
11 one instance that we'll talk about in the in-camera  
12 session, that I think goes to the question you asked.

13 COMMISSIONER PINKERT: Thank you; now I  
14 don't know who on the panel should answer this next  
15 one. But imports from all three subject countries  
16 declined under the anti-dumping orders, and some  
17 importer questionnaire responses indicate that the  
18 orders have affected sourcing decisions by imports.  
19 In light of this information, do you agree or disagree  
20 with the proposition that revocation of the orders  
21 would result in an increase in subject imports?

22 MR. SHOR: I'll take a first crack at that.  
23 The first fact we pointed out in our brief was that  
24 imports from subject countries began to decline before  
25 the orders were put into place. That's where Mr.

1 Greenwald was trying to look just at Japan and Korea  
2 this morning, and not taking into account China.

3 But if you look at China, or if you look at  
4 all three countries combined, imports were declining  
5 before the orders, both absolutely and relatively to  
6 market share.

7 If you look at what happened after the  
8 orders, there was a decline. But the question is,  
9 where did that volume go? And we know from the  
10 evidence before the Commission, the full data, that  
11 that capacity was absorbed elsewhere in the world.

12 In 2007, 2008, even Dupont and Celanese  
13 acknowledge, the world was at capacity. They were  
14 producing all they can. The rest of the world was  
15 producing they can, and there were supply problems.  
16 So that capacity got absorbed. It's not sitting in  
17 wait, ready to come back to the U.S.

18 Then we have the issue with China, which was  
19 the major exporter to the U.S., accounting for most of  
20 the volume. If you look at what happened over the  
21 period, there was a drop in 2003 right after the  
22 order. But there was an equally large percentage drop  
23 in 2007/2008, and that can't be explained by the  
24 order. That's explained by other factors.

25 We think the reduction in the VAT debate had

1 an effect on that. So there had been structural  
2 changes in the conditions of competition that suggest  
3 that the level of imports that had been declining  
4 before the order, but dropped after; that wouldn't  
5 come back to the market.

6 Having said that, even if it did, even if  
7 the exact volume pound for pound were to come back to  
8 the U.S. market, the question the Commission is faced  
9 with is, what would the impact of that be on the  
10 domestic industry? Would it reduce domestic industry  
11 sales; or would it reduce sales from Taiwan, Germany,  
12 and Singapore?

13 The best evidence is what happened. Those  
14 sales didn't go to the domestic industry when they  
15 left the U.S. market. They went to the Taiwanese  
16 mostly.

17 COMMISSIONER PINKERT: Thank you; I see that  
18 my yellow light is on. So I'll save my additional  
19 questions to the next round.

20 CHAIRMAN ARANOFF: I was thinking about all  
21 of the different testimony that we had this morning,  
22 between purchasers saying that, you know, when times  
23 were good, they couldn't get enough of this product;  
24 and the merchant domestic producers saying that, you  
25 know, when times are bad, they can't find enough

1 customers to keep their plants running.

2 So I just want to make sure. My  
3 understanding is that this is the kind of industry  
4 where when there are increases to capacity made, they  
5 have to be made in large chunks. I think you had  
6 talked about the fact that the economic scale of a  
7 plant is quite large for PVA. I take it that you're  
8 all nodding at me.

9 MR. SHOR: That's correct, yes.

10 CHAIRMAN ARANOFF: So would it be fair to  
11 say that this is the kind of marketing in which supply  
12 and demand are very seldom going to be in an ideal  
13 balance? Either somebody just brought new capacity on  
14 line and demand hasn't caught up; or nobody has  
15 brought that new capacity on line, yet. But demand is  
16 too high?

17 MR. SHOR: Let me respond this way by  
18 saying, I think it's important -- in this industry, in  
19 particular -- not to limit your focus to the United  
20 States. Because a new plant is a large amount of  
21 capacity, when you look at just the United States.

22 But this is an industry where the U.S.  
23 producers, Dupont and Celanese, export a tremendous  
24 percentage of their shipments. So they're not  
25 insulated from the larger forces of supply and demand

1 that are going on in the world; and their prices  
2 ultimately are going to be affected by what happens in  
3 the rest of the world.

4 They can't insulate themselves from that,  
5 even with a dumping order. That's the lesson of what  
6 happened after this dumping order was put in place.

7 So supply and demand in the United States  
8 may seem that there would have to be a big increment  
9 for a capacity. But it's not a big increment if you  
10 look at the world as a whole.

11 So when the Chinese producer, for example,  
12 adds a new plant because the Chinese consumed two  
13 billion pounds a year of PVA, when they add a plant  
14 that's not a big increment in capacity for them. So  
15 it balances out in the world. I don't know if that  
16 answers your question.

17 I don't think, in this case, you can just  
18 focus on the U.S. and say, there's either going to be  
19 a big imbalance or it's not going to be.

20 CHAIRMAN ARANOFF: Well, I mean, at some  
21 point I have to focus on the U.S., because that's what  
22 the statute tells me to do. But I take your point,  
23 and I think my question was more globally oriented;  
24 that this is not an industry where you can take a  
25 plant and incrementally increase your production as

1 demand goes up. These plants are basically on or off.

2 MR. SHOR: That's correct.

3 MR. FEAST: There may be opportunities with  
4 plants that are not at scale, weren't built to scale,  
5 to de-bottleneck them, to add increments of capacity  
6 that don't represent 40,000 tons.

7 At the same time, I think there was some  
8 testimony earlier that older, less efficient plants in  
9 China using outdated and dirty technology actually  
10 have been taken off line. So the evolution of global  
11 capacity, although you may see significant size new  
12 plants come on, those are characterized by the closure  
13 of older, less efficient plants, rationalization of  
14 capacity, and function of where the market growth is.

15 CHAIRMAN ARANOFF: Right, well, I'll follow  
16 you on that, because I was going to ask about that  
17 later, anyway; which is, we just don't have anything  
18 in our record to substantiate that there have been  
19 plant closures in China to balance out plant openings.

20 We have some evidence from press and other  
21 public sources about plants coming on line. Having  
22 had a not terrific response rate from China's  
23 producers, we just don't know.

24 So if there's anything that you can put on  
25 the record to substantiate that there are plant

1 closures in China that are balancing out some of the  
2 plant openings, that would certainly be helpful.

3 MR. FEAST: We'll certainly see what we can  
4 do.

5 CHAIRMAN ARANOFF: Okay.

6 MR. SHOR: Commissioner Aranoff, if I could  
7 just respond to briefly one point you mentioned in  
8 terms of the statutory question. I believe that the  
9 Commission resolved early on in its years that you  
10 really aren't just looking at the effect in the U.S.  
11 market. You're looking at the effect on U.S.  
12 producers.

13 There were cases early on, on whether you  
14 should consider the effect on exports or how you  
15 should look at the export market.

16 But to the extent the U.S. industry is large  
17 exporter, then nothing you do with the dumping order  
18 is going to affect the condition of the U.S. industry.  
19 Their profitability, their shipments, are going to  
20 depend largely on the performance of their exports.

21 So if prices for exports go up, they're  
22 going to do better. If prices for exports go down,  
23 they're going to do worse. That is something you are  
24 supposed to take into account under the statute. So I  
25 think the large degree of exports does mitigate the

1 effective imports in the U.S. market.

2 CHAIRMAN ARANOFF: Well, to the extent that  
3 you're talking about a non-attribution issue, I would  
4 agree with you.

5 Now having read Solutia's brief, in looking  
6 at demand issues, there are citations to a number of  
7 projections about the state of demand for PVA in the  
8 U.S. and the global economy, which given events since  
9 the end of our period of review where we stopped  
10 collecting data, seem kind of dated. A lot of people  
11 have revised their forecasts since then.

12 Should we be giving probative weight to  
13 projections about likely demand and about supply  
14 shortages that were made during the boom years of 2007  
15 and early 2008, in terms of considering them  
16 indicative of likely future conditions and in the  
17 reasonably foreseeable future?

18 MR. FEAST: My position would be, having  
19 indeed revised some of our own estimates, that if you  
20 look at the rate of growth in the outer years of our  
21 planning horizon and you look at what has happened  
22 over the last three to six months, the impact has been  
23 without a doubt to change our predictions for the next  
24 12 months.

25 And if you compared the projections we have

1 now with those we had maybe 12 months ago, what you  
2 would see is essentially a hiatus, a delay, in the  
3 pace of growth as markets correct, investment slows.

4 My expectation and indeed our projections  
5 show that the pace of growth is expected to pick up  
6 again. If you look at the trajectory of growth and  
7 growth rates, you know, three to five years out, they  
8 look very similar to what we had in the original plan;  
9 al beit it from a slightly smaller base, because of  
10 what we're seeing in 2009.

11 CHAIRMAN ARANOFF: I mean, obviously, in  
12 this case, as in every case, we need to define what is  
13 the reasonably foreseeable period that we're looking  
14 at. You could make a reasonable argument that next  
15 week isn't reasonably foreseeable under current  
16 conditions.

17 But the Commission normally is looking at a  
18 period of, you know, two years or less when we look at  
19 what's reasonably foreseeable in a five year review.  
20 You know, it seems to me that most things you read in  
21 the popular press would suggest that, you know, the  
22 economic recovery is maybe some time in 2010.

23 MR. FEAST: I would expect that 2009 is  
24 going to look a lot like 2008 in terms of a demand  
25 profile, inasmuch as I can tell right now, and that

1 2010 is indeed going to be a year of recovery. The  
2 question we have to answer is how fast a recovery, how  
3 sharp a recovery, and when is it going to start?

4 But my expectation is that we're going to  
5 see a one year hiatus where demand is going to look a  
6 lot in 2009 like 2008; and then the question is just  
7 about the paces that pick up in 2010.

8 CHAIRMAN ARANOFF: Let me go specifically to  
9 the issue. I spoke with Dupont and Celanese this  
10 morning. You've been very bullish on prospects for  
11 PVB and some of the downstream products that it's used  
12 in; and in particular, in referencing new applications  
13 in Federal take modules and in biodegradable plastics.

14 I know I asked this morning for this, and so  
15 I'll ask you again -- can you give us solid numbers of  
16 what you expect the demand for PVA that goes into PVB,  
17 that goes into these applications, to be in the next  
18 two years or so?

19 MR. FEAST: I certainly couldn't give you  
20 solid numbers. But I can definitely give you the very  
21 best estimates we have, and we will do that in our  
22 post-hearing brief. Because obviously, a lot of the  
23 detail in there is confidential. But we have some  
24 very good projections for the next 24 months, which I  
25 think will answer the question.

1           CHAIRMAN ARANOFF: Okay, well, that would be  
2 very helpful. To the extent that you can provide  
3 detail about who are the customers and whether these  
4 are already growing concerns that are purchasing this  
5 product or companies that are expected to start  
6 purchasing, that would also be helpful to know.

7           MR. FEAST: On a confidential basis, we'll  
8 be happy to do that.

9           CHAIRMAN ARANOFF: Thank you very much; Vice  
10 Chairman Pearson?

11           VICE CHAIRMAN PEARSON: Thank you, Madam  
12 Chairman; greetings to the afternoon panel. Mr.  
13 Feast, with a name like yours, you perhaps are  
14 particularly glad that we did take a lunch break.

15           (Laughter.)

16           MR. FEAST: You know me too well.

17           VICE CHAIRMAN PEARSON: In the event these  
18 orders are extended and an order eventually goes into  
19 place on Taiwan, how would the market place adjust? I  
20 mean, some trade sales will change. Some things will  
21 change in the global market, if we end up with these  
22 orders in place and an order on Taiwan. What might  
23 those adjustments be?

24           MR. BEREZO: You're saying the orders would  
25 be continued an an order would be one placed on

1 Taiwan?

2 VICE CHAIRMAN PEARSON: Yes.

3 MR. BEREZO: Well, certainly the risk of  
4 interruption, you know, would be a great concern for  
5 us in the North American market.

6 Depending on how things play out in the rest  
7 of the world and where demand is, we would continue to  
8 try to find alternative supply from, say, non-subject  
9 countries. It's not worked out well so far.

10 Beyond that, you know, it would be a concern  
11 for us on what the level of competitiveness would be  
12 like for the U.S. producers and what their incentive  
13 would be to work with us to develop a more reliable  
14 supply chain, and develop products that work better  
15 for us and improve our process; that sort of thing.

16 VICE CHAIRMAN PEARSON: Okay, but you don't  
17 foresee a circumstance in which Solutia or some other  
18 company would increase PVA production in the United  
19 States in response to limitations?

20 MR. BEREZO: It's possible. Like Tim  
21 mentioned, you know, we've got, like everybody has,  
22 limited resources; and you have to make choices of  
23 where to make investments.

24 You know, to the extent the economics get  
25 better or worse, I mean, a PVA expansion by Solutia I

1 don't think is out of the question, no. But, you  
2 know, we would certainly prefer to focus on our  
3 downstream operations, our downstream businesses, and  
4 grow our PVB business.

5 MR. FEAST: It's very hard to imagine to  
6 imagine a third party coming into the U.S. and  
7 building a plant here. Because as we already talked  
8 about, the capacity in the U.S. already is greatly in  
9 excess of demand in the U.S. and exists largely to  
10 serve either captive use or exports. So I don't think  
11 there's any likelihood whatsoever that someone else is  
12 going to come to the U.S. and build a plant here.

13 It's extremely difficult for us, in the  
14 situation we're in. Because the short answer to your  
15 first question is, things would not be expected to get  
16 any better in the event that the orders were  
17 continued.

18 I would not expect to see any improvement in  
19 service, and we would not be able to make the  
20 contingency plans that we talked about to protect  
21 ourselves in the event of a supply interruption; or  
22 indeed to provide a certain amount of encouragement to  
23 our suppliers to focus on the needs of ours as a  
24 customer.

25 VICE CHAIRMAN PEARSON: Is there a

1 possibility that Solutia would shift more of its PVB  
2 production overseas, rather than producing it in the  
3 United States?

4 MR. FEAST: The plants that are here today,  
5 it's very unlikely that anything would happen in the  
6 near term with respect to them. Because obviously  
7 they are significant investments we've made and not  
8 easily moved.

9 But as I mentioned in my testimony, very  
10 clearly, we are looking at this issue when determining  
11 future investments. I have to say that it is very  
12 unlikely that we would look favorably on further  
13 investments in PVB resin production in the U.S. with  
14 these orders in force. Because it's essentially  
15 asking us to put our head in the mouth of the  
16 crocodile and hope it doesn't bit.

17 VICE CHAIRMAN PEARSON: Okay, fair enough;  
18 thank you for those answers. Given what appears  
19 likely to be a significant decline in demand in the  
20 reasonably foreseeable future for PVA, is the domestic  
21 industry vulnerable?

22 MR. SHOR: We don't know. Part of the  
23 problem I have with the whole focus of the domestic  
24 industry's presentation this morning is, they seem to  
25 be predicating their entire case on a quarter and

1 developments on which the Commission has not gathered  
2 any comprehensive data.

3           They tell you their shipments are down. I  
4 don't know what their profitability is. We suspect  
5 it's up, because the VAM prices have dropped so much.

6           I don't know how the Commission can base a  
7 determination on developments in the fourth quarter of  
8 2008 and in January 2009 on which it has no data;  
9 relying on press clippings about the state of the  
10 economy generally. I think that's very dangerous  
11 territory.

12           VICE CHAIRMAN PEARSON: Right, well, I'm not  
13 relying so much on the fourth quarter of 2008, as I am  
14 trying to project into the reasonably foreseeable  
15 future; and to try to guess whether the conditions  
16 facing the domestic producers will be favorable or  
17 unfavorable. Mr. Boltuck, did you want to make a  
18 comment?

19           MR. BOLTUCK: Yes, I just wanted to add to  
20 that. You know, the statutory guidance, that the  
21 Commission evaluates the industry over or within the  
22 context of the business cycle, is really very relevant  
23 here. We are embarked in a recession at the moment;  
24 there's no doubt.

25           But you know, recessions are followed by

1 recovery. Anti-dumping orders are for five year  
2 periods at a time; and the testimony you've heard from  
3 our panel has been that certainly within the context  
4 of that five years, there's a lot of optimism about  
5 this segment of demand for PVA.

6           There will be a recovery. There are growth  
7 segments such as photo-voltaic. But also, you know,  
8 there is going to be investment in renovating schools.  
9 Schools require plate glass, which uses PVB. There's  
10 going to be replacement of large automobiles with  
11 small automobiles. Those new automobiles will have  
12 windshields that use PVB.

13           So there are all kinds of developments that  
14 may be related to the evolution of the economy that  
15 also suggest that this is one of the industries, once  
16 investment starts rolling again, that will be  
17 expanding, not contracting. So some industries are  
18 going to contract. Some are going to be bigger than  
19 they otherwise would have been in the wake of this  
20 recession, and I think that's important.

21           The other thing is that looking back to get  
22 some guidance on the performance of the industry,  
23 we'll talk about it in the in-camera session. But we  
24 certainly think the performance of this industry is  
25 better than the numbers that are before you.

1           VICE CHAIRMAN PEARSON: Okay, well, you  
2           referenced a five year time horizon, looking forward.  
3           I think giving it that much time; yes, I would see a  
4           high probability for better times for the domestic  
5           industry.

6           I don't know that the Court of International  
7           Trade would smile on that approach. So we can't, for  
8           the purposes of an opinion, look that far ahead.

9           MR. SHOR: Vice Chairman Pearson, if could  
10          just add one idea. The statute directs you to look at  
11          the performance of the industry in the context of the  
12          business cycle and the conditions of competition.

13          I think you asked a good question of the  
14          panel this morning which is, okay, even assuming that  
15          there's some vulnerability by reason of the recession,  
16          where is the causation; and is there anything to  
17          indicate that the domestic industry is likely to be  
18          injured in the reasonably foreseeable future, in the  
19          context of the recession, by subject imports? That's  
20          also an important question.

21          VICE CHAIRMAN PEARSON: No, I agree; and let  
22          me just turn that around then and ask, in that  
23          situation where they were in the downsize of the  
24          business cycle, how can we have any assurance that  
25          there won't be an increase in subject imports; perhaps

1 not an absolute increase, but an increase in terms of  
2 market share, that would be large enough to cause  
3 material injury to the domestic industry?

4 MR. SHOR: I think my best answer to that  
5 question is, can I give you an assurance? I don't  
6 think so.

7 VICE CHAIRMAN PEARSON: More likely than not  
8 -- we don't go for assurance here. We just go for  
9 more likely than not.

10 MR. SHOR: This is an unusual case in a lot  
11 of respects, apart from the fact that you have the  
12 three domestic producers here arguing with each other.  
13 But consider the high degree of captive consumption,  
14 the high degree of exports, the relatively small share  
15 that is even subject to import competition; and  
16 compare that segment of the market to the export  
17 segment of the U.S. industry.

18 I liken it to a balloon; and I'd invite the  
19 domestic industry to respond to this issue. But what  
20 they basically said this morning is, their business  
21 model is, they want to protect the U.S. market from  
22 dumping so they can dump in other markets; because  
23 they have excess capacity and they're going to sell in  
24 other markets at below the prices they sell here.

25 So they want to dump in other markets, and

1 not have anybody dump here. At the same time, there's  
2 this balloon effect on the market. If prices in the  
3 rest of the world drop, that's going to hurt their  
4 export earnings.

5 But they can't have it both ways. Either  
6 the recession is going to affect their export earnings  
7 or it's going to affect their domestic sales, and  
8 they're going to balance out. If they protect one,  
9 the other is going to go down. If you squeeze one,  
10 the air is going to come somewhere else.

11 VICE CHAIRMAN PEARSON: Okay, fine; I took  
12 too many liberties with the red light this morning.  
13 So I think we'd better end it there, Madam Chairman.

14 CHAIRMAN ARANOFF: Commissioner Lane?

15 COMMISSIONER LANE: Good afternoon; Mr.  
16 Shor, I'm going to start with you because this is the  
17 question that I've had from the very beginning of  
18 getting ready for this hearing. How would revocation  
19 of these orders benefit Solutia?

20 MR. SHOR: I have an answer to that  
21 question.

22 COMMISSIONER LANE: Well, I figured you  
23 would.

24 MR. SHOR: It's one we've discussed quite a  
25 bit.

1                   COMMISSIONER LANE: I guess I still don't  
2 understand.

3                   MR. SHOR: What Solutia most wants is not to  
4 buy imports from any subject country. We do not want  
5 to be an importer. The testimony this morning was, we  
6 do not want a supply chain extending around the world.

7                   What we want is reliability of supply, and  
8 we want what was talked about this morning, a  
9 contingency plan. We want to be able, in the event  
10 that Dupont or Celanese has another force majeure or  
11 minor outage -- in that instance to be able to attain  
12 supply.

13                   We will talk about this more in the in-  
14 camera session. We do not want to have long term  
15 contracts necessarily with foreign suppliers. We do  
16 not want them to be our primary suppliers; but we need  
17 a contingency plan. We don't have one now and we  
18 can't have one now.

19                   COMMISSIONER LANE: Have you discussed with  
20 the Chinese producers the possibility of buying  
21 subject product from them?

22                   MR. BEREZO: Yes, we have.

23                   COMMISSIONER LANE: Have you entered into  
24 contracts?

25                   MR. BEREZO: No.

1                   COMMISSIONER LANE: Have you made any  
2 arrangements whatsoever to buy product, other than  
3 what you're currently buying?

4                   MR. BEREZO: We have experience with Chinese  
5 production for our operations in Europe. So one way  
6 to try to understand what the capability is of Chinese  
7 producers to meet our qualifications is to experiment  
8 with our operations in Europe.

9                   COMMISSIONER LANE: Okay, just in case I was  
10 vague, have you discussed with Chinese producers  
11 buying subject product for your operations in the  
12 United States?

13                   MR. BEREZO: No, we have not.

14                   COMMISSIONER LANE: What about Korea or  
15 Japan?

16                   MR. BEREZO: No.

17                   COMMISSIONER LANE: All right, thank you; I  
18 sort of saw an inconsistency in your direct remarks --  
19 not yours. I can't remember who said that you wanted  
20 a diversity of supply, and so you were looking at  
21 China for diversity of supply.

22                   But at the same time, you said China is not  
23 going to come into this market because their capacity  
24 is already going to their home market. Now could you  
25 please reconcile those two thoughts and make them

1 consistent?

2 MR. FEAST: It was the response we got when  
3 we embarked on some discussions with Chinese suppliers  
4 of PVA to see what their availability would be. In  
5 fact, the common response we got was, we have no  
6 interest in supplying you. We're fully committed to  
7 supplying our home market.

8 So while we are looking for a contingency  
9 supply to improve the reliability of our supply base,  
10 the very clear direction we got from those we spoke  
11 with was that they really weren't interested in  
12 supplying the U.S. market. Their home market was  
13 fully utilizing their capacity.

14 Added on to that, they could supply a very  
15 simple grade of product to their home market; and the  
16 last thing they wanted to do was to embark on a lot of  
17 effort to supply the more demanding requirements of  
18 the PVB industry, when they could supply something  
19 simpler to a market that was already fully sold out.

20 COMMISSIONER LANE: Okay, if the orders were  
21 to be revoked, what is your estimate of the amount of  
22 subject product you would purchase from China, Korea,  
23 or Japan?

24 MR. FEAST: Over the next two years, which I  
25 think is the horizon you're looking at, my expectation

1 in the U.S. market for the amount we would purchase  
2 from those companies would be zero.

3 MR. BOLTUCK: May I just add that this  
4 really has to do with an understanding of their  
5 strategy; that they're interested in pursuing should  
6 the orders be revoked. They want, as has been  
7 explained, a contingency plan.

8 The reason they want it is that over the  
9 past two years, they have reassessed the risk to which  
10 they are exposed with respect to their supply security  
11 or reliability within the U.S. market from U.S.  
12 suppliers. They've had very bad experiences with  
13 respect to two suppliers.

14 Consequently, they don't know if those are  
15 just one offeror events. As you heard this morning,  
16 it may turn out to be the case. That would be  
17 wonderful, from their standpoint. They'll supply 100  
18 percent of their needs from Dupont and Celanese in the  
19 future then.

20 However, they can't count on that. They  
21 need to engage in a risk minimization strategy, and  
22 that means seeking to qualify a foreign supplier.

23 COMMISSIONER LANE: Okay, and just to make  
24 sure that the record is clear, when you say "they",  
25 you are referring to Solutia?

1 MR. BOLTUCK: Yes, I think; I'm referring to  
2 Solutia as the purchaser, yes. However, the companies  
3 that currently supply them are Celanese and Dupont,  
4 both U.S. producers.

5 COMMISSIONER LANE: Okay, let me stick with  
6 you, and maybe the Solutia folks or Mr. Shor an answer  
7 this. If, looking at the BPI information, and  
8 assuming of course that everybody wants to maximize  
9 their profits and would sell into the best market  
10 where they could get the best price, then why are  
11 Celanese and Dupont not selling more of their product  
12 to Solutia, rather than other markets?

13 MR. FEAST: I have to assume, since they are  
14 rational organizations, that they are maximizing their  
15 profit. Therefore, the margins they make on the  
16 export sales they have been making were superior to  
17 the margins they were making on sales to us.

18 One thing that's very important to consider,  
19 and particularly in the context of a market that was  
20 sold out in the period 2007/2008, you can run a plant  
21 for 24 hours a day. So when the plant is running flat  
22 out, the question becomes how much profit can you make  
23 per hour that the plant is running?

24 So if you have a relatively cheap product,  
25 but it runs much more quickly through the plant so you

1 can produce three times as much of it during that  
2 given period and you sell that product into your  
3 export market, it might appear to be a lower priced  
4 product on unit basis.

5 But in terms of the amount of profit you  
6 earn from an hour of production, you're better off  
7 producing three units of cheap product and selling  
8 them, than one unit of a more expensive product and  
9 selling that.

10 Now I don't claim to have insight into how  
11 they run their plant. But it's not necessarily the  
12 case that because someone sells a lower price product  
13 into a particular market, that that is a lower profit  
14 product in the context of maximizing their  
15 profitability.

16 MR. SHOR: Let me just give the background  
17 to that. Our understanding is that the PVB grade BVA  
18 that we want to purchase takes longer to produce in  
19 the factory. So what Tim was mentioning is, when the  
20 factory is at capacity and producing full out, they  
21 can make more money by producing more cheaper stuff  
22 than our product.

23 COMMISSIONER LANE: Okay, and one of you  
24 characterized that Celanese and Dupont preferred  
25 dumping in other countries than selling to you. Now

1 dumping is your characterization, right? I mean,  
2 Celanese and Dupont didn't use that word this morning.

3 MR. SHOR: I was using Mr. Pearson's term  
4 from this morning.

5 COMMISSIONER LANE: Okay, but Celanese and  
6 Dupont didn't say that they were dumping in other  
7 countries, did they?

8 MR. SHOR: No, they said that they were  
9 selling at lower prices in other countries than they  
10 were selling in the United States.

11 COMMISSIONER LANE: Okay, and so dumping is  
12 your characterization.

13 MR. SHOR: Yes.

14 COMMISSIONER LANE: Okay, all right, let me  
15 see if I have anything else right now. I'll wait  
16 until my next round; thank you, Madam Chairman.

17 CHAIRMAN ARANOFF: Mr. Williamson?

18 COMMISSIONER WILLIAMSON: Thank you, Madam  
19 Chairman, and I do want to thank the witnesses for  
20 their testimony. Now has Solutia ever used imported  
21 PVA in the United States?

22 MR. BEREZO: Ever in the history of the  
23 production?

24 COMMISSIONER WILLIAMSON: During the period  
25 of review.

1 MR. BEREZO: No.

2 COMMISSIONER WILLIAMSON: I, like  
3 Commissioner Lane, am having some problems with this.  
4 I think, Mr. Feast, you said that right now you think  
5 capacity in the U.S. in excess of the demand.

6 MR. FEAST: I have to assume, based on the  
7 assertion by Celanese and Dupont, that they're  
8 exporting their excess. So there must be an excess.

9 COMMISSIONER WILLIAMSON: If your  
10 contingency plan is not really to be based on buying  
11 imported PVA, because I take it the quality is  
12 probably not there in many cases, that sounds to me  
13 like you think that Celanese and Dupont will make more  
14 PVA that you want if there's more imported PVA in the  
15 U.S. market; particularly since you talked about the  
16 fact that where the imports are coming are in what you  
17 call declining sectors for sales in the U.S.

18 MR. FEAST: That isn't actually the theory.  
19 I think what you're suggesting is, if we can open the  
20 door to foreign imports such that they have excess  
21 capacity, then they'll be interested in selling that  
22 capacity to us.

23 Actually, what we're looking to do is create  
24 an opportunity for us to qualify one or two sources of  
25 high grade product that we would like to buy from

1        somewhere; and right now, it has to be somewhere else  
2        in the world, because there's no where else in the  
3        U.S.

4                    My expectation is that Celanese and Dupont  
5        do value our business; and that they will, in the  
6        event that we have that option, focus more on meeting  
7        our needs and servicing us as a very important  
8        customer.

9                    But absent that credible threat -- I mean,  
10        faced with the reality that this is a duo-poly,  
11        sometimes benign, sometimes not, in which one of the  
12        pair is a major competitor and which we have no choice  
13        but to buy from the two of them and no opportunity to  
14        pick up our plants and move the somewhere else, we  
15        don't believe that we have got the service in terms of  
16        supply or quality that we need in order to grow this  
17        business. We see no option other than creating an  
18        alternative to bring that focus to bear.

19                    Now for the next two years, even where we  
20        define someone outside the U.S. who is willing to put  
21        the effort into upgrading their product to meet our  
22        specifications, realistically it would take us a year  
23        to do that. So nothing is going to change in the  
24        first year.

25                    Then our contractual arrangements, as Mr.

1 Berezko mentioned, are long term. So we're not looking  
2 to make quick switches. So there's no reason why  
3 those suppliers, if they're focused on our business,  
4 should continue to supply.

5 MR. SHOR: Commissioner Williamson, I think  
6 we could expand more on that in the in-camera session.

7 COMMISSIONER WILLIAMSON: Okay, I was about  
8 to ask the question, what qualifiers did you leverage  
9 to obtain lower prices Celanese and Dupont?

10 MR. SHOR: It's not an issue of price.  
11 We'll talk about it in the in-camera session, because  
12 I can't get into it now.

13 COMMISSIONER WILLIAMSON: I was about to  
14 start off with a Rodney King comment -- why can't you  
15 all get along? But maybe we can ask that later.

16 (Laughter.)

17 MR. BEREZO: I think it's important to point  
18 out, as a buyer, we want and need healthy suppliers.  
19 It doesn't do anybody any good to have unhealthy  
20 suppliers. We want our suppliers to be successful.  
21 It helps them invest in their business, and enables us  
22 to go to them for help when we want new products  
23 developed. So we want healthy suppliers.

24 We also need reliable suppliers; and the  
25 track record over the last two years has just been

1 unacceptable. Our objective is to find a way to have  
2 a very small portion of alternative supply, longer  
3 term, from some place other than the United States.  
4 The idea there, since we're not going to have a lot of  
5 expansions here in the U.S. -- at least it doesn't  
6 look as if anybody is expanding -- is to have some  
7 material on the water, at any given time, that can  
8 help us in a pinch.

9 MR. BEREZO: ... spot purchases from time to time on,  
10 you know, some sort of a routine basis, but we have no  
11 intention of not having our US suppliers as our  
12 dominant suppliers, now or long-term.

13 COMMISSIONER WILLIAMSON: Over the lunch  
14 break, I was wondering, is the question, since the  
15 allocations, they seem to, I guess, relating more to  
16 hurricanes and weather problems, is the question  
17 whether or not somebody should be building a plant up  
18 north rather than down on the Coast? I mean, I know  
19 there are questions of where you get your energy and  
20 all that from, but it's --

21 MR. FEAST: We did what we could. We built  
22 our plants away from the Coast, so, you know.

23 COMMISSIONER WILLIAMSON: What's that?

24 MR. FEAST: We built our plants away from  
25 the Coast. We can only hope that our suppliers will

1 do the same.

2 COMMISSIONER WILLIAMSON: Okay, because,  
3 one, you say, here's the capacity in the US to meet  
4 demand, even anticipated demand now, is that correct?

5 MR. FEAST: As long as they are not  
6 exporting it, yes.

7 COMMISSIONER WILLIAMSON: Okay, and I assume  
8 that the PVA that's used for the PVB, the PVA is  
9 higher priced and you talk about the fact that the gap  
10 between the bag (ph) and the PVA price growing, is it  
11 larger for the higher quality PVA that's used in PVB?

12 MR. BEREZO: Yes, I think on a unit basis,  
13 that's true, but I think to the point that Mr. Feast  
14 was making, through-put matters. So if you can have a  
15 material that's slightly lower priced but runs through  
16 the unit a lot faster and you can get a lot more  
17 volume, I mean, the math just works better. You can  
18 make more money, which is, in fact, what we heard from  
19 the competition, or our suppliers, I should say, when  
20 we talk with them about, we don't get it, how can you  
21 say that the market -- this is in 2007, 2008 -- how  
22 can it be that the market is so tight and you continue  
23 to export material? How can that be? I mean, why do  
24 you export material? And the answer was, because we  
25 make more money.

1                   COMMISSIONER WILLIAMSON: Okay, well, I  
2 would invite the Petitioners to address that post-  
3 hearing to, get their views on that. You cite your  
4 strategic analysis study from July 2008, about global  
5 supply and all that, and I was wondering, how should  
6 that study be changed in light of what's happened in  
7 the fall of 2008?

8                   MR. BEREZO: I think, if I remember, there  
9 was a lot in that study, and I'm pretty sure that the  
10 take-home message was that longer-term PVA was tight  
11 globally, and I think the change would be that the,  
12 you know, instead of -- because they don't build any  
13 recessions into the growth projections or demand  
14 projections, instead of a straight line, you're going  
15 to see a dip, and then a resuming of the trajectory  
16 that you have.

17                   The applications that the PVB goes into,  
18 anyway, and a lot of the applications for PVA are, I  
19 mean, they are fundamental. They have been around for  
20 a long time. There is an ongoing need. The world  
21 needs these things, and so there is no reason to think  
22 that that trajectory won't return as soon as some  
23 money starts to flow in the world.

24                   COMMISSIONER WILLIAMSON: Okay. So it's  
25 just that the projections are the same but maybe they

1 just are --

2 MR. BEREZO: Down and then back up, mm-hmm.

3 COMMISSIONER WILLIAMSON: Okay, thank you.  
4 Okay. My time is about to expire. I'll save my  
5 questions for later. Thank you.

6 CHAIRMAN ARANOFF: Commissioner Pinkert?

7 COMMISSIONER PINKERT: Thank you, Madam  
8 Chairman. I've got my green light on there. Okay, so  
9 on page 32 of your brief, your prehearing brief, it  
10 seems to me that you are suggesting that increased  
11 imports after the hypothetical lifting of the orders  
12 would indirectly benefit US producers. Am I reading  
13 that wrong, or is there some analysis that you can  
14 give to that?

15 MR. SHOR: That was the balloon theory I  
16 explained before that, as was discussed this morning,  
17 the PVA that's produced in China that's being exported  
18 is being exported somewhere today, and maybe what it's  
19 doing is causing prices in Latin American to be lower  
20 than they would be if they weren't otherwise there.  
21 So, Celanese is seeing that on their export side.

22 If those imports were to come to the United  
23 States instead of to Latin America, the reverse would  
24 happen. They would see their prices on their exports  
25 to Latin America go up, and we think what would most

1 likely happen is there wouldn't be much of a change in  
2 the US but the Taiwanese exports would be forced out  
3 of the market since -- due to confidential reasons I  
4 can't get into, but, so there might not be as big of  
5 an impact, but it's the counterbalancing effect of a  
6 domestic industry that is -- I don't know how much  
7 this -- is significantly present in both a domestic  
8 market and the export market.

9 MR. BOLTUCK: I would just point out, Mr.  
10 Greenwald made a very similar point in reverse this  
11 morning when he said that, in his belief of course,  
12 his view is that the orders kept a lot of subject  
13 imports out of the United States, and he said that  
14 might be one of the reasons why, in his view, prices  
15 are lower in markets outside of the United States,  
16 because those products find homes outside of the  
17 United States.

18 We are just pointing out that, to the extent  
19 his concern about shifts in where subject imports are  
20 sold has any validity at all with respect to the  
21 orders, that if they are sold here, the reverse is  
22 going to happen. Prices are going to rise outside of  
23 the United States, and that's relevant for this  
24 industry because this industry sells a lot of what it  
25 produces outside of the United States, and that's a

1 help. That's a benefit.

2 COMMISSIONER PINKERT: Thank you. More  
3 broadly, we did discuss in the earlier session the  
4 question of how to evaluate the vulnerability of the  
5 domestic industry in light of the economic downturn,  
6 and I had asked the domestic industry representatives  
7 to tell me whether it's just a question of demand  
8 declining in light of the recession, or whether there  
9 is some more complex analysis that we need to perform,  
10 and you heard the answer that we received this  
11 morning.

12 I am wondering whether you want to put your  
13 own gloss on this issue.

14 MR. SHOR: Well, as we had mentioned, we  
15 think you can't look at the demand in isolation. You  
16 have to also look at the other factors under the  
17 statute, and one of them is profitability, and they  
18 didn't give you any data on their profitability in the  
19 fourth quarter of 2008. So the question is, yes,  
20 demand is declining, but are prices declining? Are  
21 your raw material costs declining?

22 It's a balance of all those factors, and if  
23 shipments are down, but prices and profitability are  
24 being sustained, we would certainly contend that the  
25 industry is non-vulnerable.

1           MR. FEAST: I think if we were instructed to  
2 look at what this discussion would have been like if  
3 we had had it six months ago, we would have had  
4 domestic suppliers who have absolutely sold out, who  
5 had no materials to supply to us, who were exporting  
6 to more attractive export markets rather than supply  
7 to us, and would have had an extremely hard time  
8 demonstrating that they would have come to harm if  
9 those orders had been lifted.

10           So, what we have seen since then, to me, is  
11 purely an impact of a temporary global downturn which  
12 is going to be particularly severe over the  
13 December/January period because of the much-publicized  
14 inventory corrections, plant shutdowns -- it's not  
15 going to be all roses in February, but the upturn is  
16 going to make the next two years look nothing like the  
17 last two months.

18           COMMISSIONER PINKERT: Thank you. Now,  
19 regarding the subject producers' incentive to export  
20 to the United States, could you react, either here or  
21 in the post-hearing, to Table 2 on page 4 of the  
22 DuPont-Celanese prehearing brief, which compares the  
23 average unit values for domestic producers' US  
24 commercial shipments with the AUVs for subject  
25 producers' shipments to other export markets?

1           MR. SHOR: Those are average unit values of  
2 different countries that have completely different  
3 product mixes. The US industry, we know 40% is in PVB  
4 at the higher-price application. Of course US average  
5 unit values are going to be higher than the rest of  
6 the world. It doesn't tell you anything about  
7 product-specific basis (ph).

8           MR. BOLTUCK: I would just like to add that  
9 there was a question this morning of the other side  
10 also about product mixes, perhaps Commissioner Aranoff  
11 asked it, and the answer was roughly, well, you know,  
12 we sell all the same stuff we sell here, we sell it  
13 there, but that isn't a full answer regarding product  
14 mix. Product mix is not just the specific components  
15 that are in the mix, but also the proportions, and  
16 that makes a big difference. If you have a higher  
17 proportion of a lower-priced product, you will get a  
18 lower unit value.

19           COMMISSIONER PINKERT: Thank you. Now,  
20 perhaps the Solutia witnesses could help me with the  
21 typical length of the contracts with Celanese and  
22 DuPont, and can the price typically be renegotiated?

23           MR. SHOR: We'll discuss that in the in  
24 camera session later.

25           COMMISSIONER PINKERT: Thank you. And what

1 percentage of the long-term contracts that your  
2 company enters into contain the meet-or-release  
3 clause?

4 MR. SHOR: We'll discuss that in the in  
5 camera session as well.

6 COMMISSIONER PINKERT: Okay. I have another  
7 question on that issue, and if you want to discuss it  
8 in the in camera session, that's fine, but have you  
9 ever invoked such a clause to reduce a supplier's  
10 price under a long-term contract?

11 MR. SHOR: We'll discuss that in the in  
12 camera session as well.

13 COMMISSIONER PINKERT: Okay. Now, prices  
14 for PVA were rising through the third quarter of 2008.  
15 Can you tell me what has happened to the PVA prices in  
16 the US market since that time, in light of the  
17 economic downturn?

18 MR. SHOR: Solutia is paying higher prices.

19 COMMISSIONER PINKERT: Mr. Feast, would you  
20 like to elaborate on that?

21 MR. FEAST: What can I say? Much to my  
22 disgust, Solutia is paying higher prices. We are  
23 paying higher prices in 2009 than we were paying in  
24 2008 than we were paying in 2007, so economic downturn  
25 notwithstanding, prices are going up.

1                   COMMISSIONER PINKERT: Perhaps Mr. Boltuck  
2 would like to explain the economics behind that.

3                   MR. BOLTUCK: Well, I wish I could offer an  
4 obvious explanation for that, but I think it is supply  
5 and demand, and it really emphasizes that there is  
6 tight supply for the specific product that Solutia  
7 seeks to buy, and Solutia's concern in their complaint  
8 has been that in 2007 and 2008, they bumped into  
9 practical capacity constraints in the US market, not  
10 for some amorphous, undifferentiated PVA product, but  
11 rather for the very specific product they seek to  
12 obtain, and the indications are that there is no  
13 assurance that the situation has improved, and they  
14 feel that they continue to be exposed to that risk,  
15 and certainly, the pricing situation they face in the  
16 US is at least consistent with a continued tight  
17 supply for the grade that they seek to acquire.

18                   COMMISSIONER PINKERT: One last question for  
19 Mr. Shor. As you know, the largest single source of  
20 the non-subject imports is Taiwan, and as you also  
21 know, they are currently subject to an investigation,  
22 at least pending the outcome of the appeal to the  
23 Federal Circuit. How should we treat the imports from  
24 Taiwan in the context of this review? Should we treat  
25 them any differently from the other non-subjects?

1           MR. SHOR: I know Mr. Greenwald said yes,  
2           but I can't think of any legal basis for that answer.  
3           They haven't been found to be dumped. They haven't  
4           been found to be injurious. They are non-subject  
5           imports, period. There are not different grades of  
6           non-subject imports. Commerce sustained no dumping  
7           finding even.

8           COMMISSIONER PINKERT: Thank you. You may  
9           wish to address that further in the post-hearing, but  
10          I gather that you and Mr. Greenwald don't have the  
11          same viewpoint on that issue.

12          Thank you, Madam Chairman.

13          CHAIRMAN ARANOFF: Let's just say that I  
14          were to accept, you know, Solutia's basic case that  
15          you are interested in subject imports because you  
16          would like to have an alternate source of supply and  
17          you are going to be a responsible actor and not pit  
18          ultra-low-priced Chinese imports against your domestic  
19          suppliers and drive down prices in the domestic market  
20          if the orders are revoked.

21          I guess my question is, even if I accepted  
22          all of that -- and it may very well be true, you all  
23          testified to it under oath -- there are a lot of  
24          producers in China and there are a lot of customers in  
25          the United States, and your story about how the market

1 works for you doesn't really tell me anything, does  
2 it, about how the Chinese producers are likely to act  
3 in the event of revocation with respect to other US  
4 purchasers? And the same would go also for Korean and  
5 Japanese producers.

6 MR. BEREZO: Well, I think I would like to  
7 address that from the point of view of the purchaser.  
8 You know, our entire thesis here is we are looking for  
9 the liability supply, so to the extent that we do not  
10 have the majority of our supply, the vast majority of  
11 our supply, supplied by domestic producers, we have a  
12 risk. You know, I have sold things to China. I have  
13 bought things from China. It's a long way away.

14 There are all sorts of things that happen  
15 with the supply chain, and supply interruption is  
16 something that is a lot more expensive than people  
17 think. We look at total delivered cost. That also  
18 includes risk. When we have to supply Mr. Feast's  
19 business, we want to make sure that there are no  
20 interruptions, so the logic behind why you should  
21 believe it, it's why -- what the logic is that  
22 supports the fact that we would have a minority supply  
23 is, we wouldn't want to put any more risk in the  
24 supply chain than we had to.

25 Therefore -- and I don't think that's a

1 unique point of view. I think a lot of purchasers  
2 would have the same point of view, and so that if  
3 subject imports were able to come in without the  
4 antidumping duties, I think that people would look at  
5 the use of them as suppliers the same way that we do.

6 MR. SHOR: Let me just respond with some  
7 more data you have that bolsters what Mr. Berezo said.  
8 We heard from Celanese this morning, which is the  
9 largest seller to the US merchant market, that 70% of  
10 their shipments are under long-term contracts from one  
11 to three years. What that tells you is that the  
12 purchasers are interested in long-term security  
13 supply.

14 They are not interested in shifting back and  
15 forth from supplier to supplier, and yes, there is an  
16 economic downturn now, but as everyone understands,  
17 and we don't know when, there will be an upturn, and  
18 there will come a point in time again when supply  
19 becomes tighter than it is today, and if you are a  
20 purchaser and you've got a business that you want to  
21 be around 10 years from now or 20 years from now, you  
22 are not going to go to China for some six-month  
23 advantage at 5 cents a pound and then have the  
24 possibility a year from now that you are not going to  
25 be able to get anything from DuPont and Celanese

1 because you don't have a contract with them and supply  
2 is tight.

3 So I think the fact that 70% of Celanese's  
4 customers have long-term contracts tells you a lot  
5 about the nature of the industry and the nature of the  
6 demand for PVA.

7 MR. BOLTUCK: And Commissioner, I think the  
8 question also went to the segments of the US market  
9 that Solutia is not in specifically, and I understood  
10 that. You know, it's absolutely true that Solutia is  
11 here to speak for itself. It's an important part of  
12 the US market, and PVB production is the most  
13 important single end use in the United States. We,  
14 however, have looked at the data that was collected by  
15 the Commission in the original investigation and in  
16 this investigation, and are basically pointing out  
17 some inferences from that data that are very strong  
18 economically, and that is that, even if there is  
19 competition in some end uses, which we don't know from  
20 first-hand experience one way or the other that you  
21 are correct to point that out, but even if there is,  
22 the domestic producers are insulated from any effect  
23 based on the observation of what happened when the  
24 order was implemented, namely that there was basically  
25 a substitution of non-subject product in the US market

1 for subject product.

2 So that we can see, so we don't have to be  
3 experts on textile sizing to understand that there was  
4 an essential insulation of US producers, based on the  
5 evidence that the Commission itself has collected.

6 CHAIRMAN ARANOFF: I am going to think about  
7 that some more and come back with some more --

8 MR. SHOR: Let me just follow up on that,  
9 because Richard makes a good point. I think you have  
10 data before you on the product pricing that will tell  
11 you the relative hierarchy of domestic producer  
12 prices, Taiwan prices, and subject producer prices.  
13 So the question is, if there is going to be price-  
14 based competition, if low-priced imports from China,  
15 Japan or Korea come into the US market, who is most  
16 likely to be displaced first, and I would urge you to  
17 look at the data and see who is the low-priced player  
18 in the US market today. They are most likely to be  
19 displaced first.

20 CHAIRMAN ARANOFF: It's a touchy thing  
21 because there's not really any way that we can find, I  
22 don't think, on this record, that subject imports in  
23 the event of revocation would increase in exactly the  
24 amount by which non-subject imports increased when the  
25 order went into effect.

1           MR. SHOR: No, but you look at the  
2 conditions of competition and you ask yourself what's  
3 different in the market today. One thing that is  
4 different is it now costs the Taiwanese producer 8%  
5 more to export to the United States than it did back  
6 in 2003, because of the change in the VAT rebate, and  
7 notwithstanding anything Mr. Greenwald told you this  
8 morning, that has not changed. I checked last week.

9           So that condition has changed, so if  
10 anything, the balance is a little different than it  
11 was before. You also have the presence of the  
12 Taiwanese in the US market. That makes the US market  
13 relatively less attractive to producers in China,  
14 Japan and Korea because there is more competition here  
15 than there was before.

16           MR. BEREZO: And I would just add that I  
17 think it's not really a fair objective that we get it  
18 down to exactly how many pounds this will displace if  
19 subject imports increase down to the last pound. That  
20 isn't your job either, but the statement of  
21 administrative action points out that a five-year  
22 review is an inherently counterfactual analysis. That  
23 means you do have to do your very best to answer the  
24 question, how the market would adjust if the orders  
25 come off, and part of the adjustment is the role of

1 non-subject imports in the market, and there is  
2 evidence about how that adjustment takes place, based  
3 on what happened when the order went into effect.

4 So all we are saying is, it works in a  
5 certain direction and you need to come up with a view  
6 of what that likely adjustment will be, and we are  
7 suggesting it's very substantial based on what we saw  
8 actually happen.

9 CHAIRMAN ARANOFF: Okay. Well, I guess I am  
10 trying to urge you, to the extent that you can post-  
11 hearing, to help me to come up with the best story for  
12 why, other than the purchases that Solutia might want  
13 to make if the orders were revoked, what else is going  
14 to happen in the market. We look at the market, we  
15 know what happened during the Asian financial crisis  
16 when the US was the market of last resort for a lot of  
17 Asian production.

18 We know that freight rates are down right  
19 now. We know what's going on with exchange rates. We  
20 know that demand for Chinese textile products is down  
21 right now, and so they may not be consuming as much  
22 PVA in China as they were a little while back. So  
23 there's a lot of factors that we know are going on out  
24 in the market to lead us to think that there is excess  
25 capacity in Asian producers that wasn't there six

1 months ago, and that probably will continue to be  
2 there at least until the global economy starts turning  
3 around, and so the question is, why wouldn't a  
4 significant volume of that product come to the US?

5 And, you know, the VAT tax situation is one  
6 disincentive, but that's in the face of a whole lot of  
7 other incentives that we know are there.

8 MR. SHOR: We'll do our best.

9 CHAIRMAN ARANOFF: Thanks.

10 Vice Chairman Pearson?

11 VICE CHAIRMAN PEARSON: Thank you, Madam  
12 Chairman.

13 Just a couple more questions for the open  
14 session. Just to clarify, do you support revocation  
15 of all three of these orders?

16 MR. SHOR: Our argument is, first, that we  
17 think China should be decumulated and that it should  
18 receive revocation, and in the alternative, all three  
19 should be revoked.

20 VICE CHAIRMAN PEARSON: Okay. Is there any  
21 basis for not exercising our discretion to cumulate  
22 Korea and Japan, or in other words, which is the  
23 better argument, to cumulate those two or not cumulate  
24 them?

25 MR. SHOR: I think there is very little to

1 differentiate those two. We don't know a lot about  
2 those markets so we haven't made an argument about  
3 that. We know very little about the Korean --

4 VICE CHAIRMAN PEARSON: You have access to  
5 the confidential record that we have, and --

6 MR. SHOR: Right. There seems to be very  
7 little basis --

8 VICE CHAIRMAN PEARSON: You have as much  
9 information on which to make a decision as the  
10 Commission does, I think.

11 MR. SHOR: That's a fair point. We are not  
12 urging the Commission to decumulate those two  
13 countries.

14 VICE CHAIRMAN PEARSON: Okay.

15 Madam Chairman, I think I have no more  
16 questions for the open session.

17 CHAIRMAN ARANOFF: Commissioner Lane?

18 COMMISSIONER LANE: Mr. Shor, what would be  
19 your best argument for not cumulating China with Japan  
20 and Korea?

21 MR. SHOR: Do I only get to pick one, or can  
22 I use all six that I had in my brief?

23 MR. LANE: Well, I thought I would let you  
24 start with your best argument.

25 MR. SHOR: The Chinese are just not export-

1 oriented. They are completely focused on their  
2 domestic market. They are small exporters. The  
3 volumes exports from China are smaller, I believe,  
4 than the other two countries and smaller than the US.  
5 It's a low percentage. It's just not -- they are not  
6 interested in exporting. They are interested in their  
7 domestic market.

8 COMMISSIONER LANE: And so it would be wrong  
9 for us to conclude that since China does a lot of  
10 exporting in other products that it might also want to  
11 export this product?

12 MR. SHOR: Sure. There's no -- China is  
13 export-oriented on certain finished products like  
14 textiles. This is a product that primarily serves the  
15 textile market. So it was built and designed and  
16 their focus is on meeting domestic demand.

17 COMMISSIONER LANE: Okay, thank you. Has  
18 Solutia's European operations purchased PVB-grade PVA  
19 from subject countries?

20 MR. BEREZO: Yes.

21 COMMISSIONER LANE: Okay. If yes, then why  
22 doesn't Solutia's US operations also do the same?

23 MR. BEREZO: Well, it's not very economical.  
24 You are looking for a security supply and a balance  
25 and an alternative that makes economic sense.

1           MR. FEAST: I think there are some aspects  
2 to those purchases as well that I think we need to  
3 clarify, maybe in the in camera session, to provide  
4 more detail.

5           COMMISSIONER LANE: Okay, Mr. Feast, did I  
6 understand you to say that Celanese and DuPont are  
7 selling a different product abroad than the same  
8 product that they are selling in the United States?

9           MR. FEAST: No, they have testified, I don't  
10 know, but they have testified that they sell the same  
11 products abroad that they sell here. There appears to  
12 be a conflict here because their testimony this  
13 morning was that we only export because we have to,  
14 it's lower price, it's less attractive than our  
15 domestic business, so we only do it because we are  
16 forced into it by the excess capacity, and I have  
17 trouble making that stick with what they told us when  
18 we were on allocation, which is, your business is less  
19 attractive to us than the exports, therefore, we are  
20 only going to supply you X.

21           So for me, it's not clear to me that the  
22 business overseas is less attractive, and to the  
23 extent that it may be lower price, lower price does  
24 not necessarily mean less attractive, because  
25 certainly there are products that we supply that may

1 have a higher price point, but less unit profitability  
2 or less profitability per hour of plant time, and I  
3 get into the realm of speculation because I don't know  
4 their business, but clearly there is a reason that  
5 they export, and I don't believe, based on what they  
6 have told us in the past, that it's simply a question  
7 of, we do it because we have to and it's all low-  
8 priced business and we wish we didn't have it.

9 COMMISSIONER LANE: Okay, thank you. In  
10 what major markets is PVB currently the most expensive  
11 to purchase?

12 MR. SHOR: I just wanted to clarify, your  
13 question is which countries?

14 MR. FEAST: We won't get into the details  
15 publicly, but generally, PVB is a globally traded  
16 product. Global requirements in the automotive  
17 industry are fairly consistent, and although the  
18 architectural markets differ, all of the players in  
19 the PVB market are, to a greater or lesser extent,  
20 global. So pricing tends to be similar all around the  
21 world, simply because capacity can be directed to  
22 different world markets.

23 COMMISSIONER LANE: Okay, thank you. Does  
24 Solutia have a by-product that it either recycles or  
25 sells?

1 MR. BEREZO: Yes. In our process, we  
2 produce -- as a by-product you are talking about in  
3 the PVA process?

4 COMMISSIONER LANE: Yes.

5 MR. BEREZO: Yes, our by-product turns out  
6 to be ethyl acetate.

7 COMMISSIONER LANE: And what do you do with  
8 it?

9 MR. BEREZO: We resell it. In the open  
10 market, it's used in the solvents business.

11 COMMISSIONER LANE: And do you sell that at  
12 market price?

13 MR. BEREZO: Yes. There are other producers  
14 out there who make it on purpose, and so yes, we sell  
15 it market price.

16 MR. FEAST: We actually have a marketing  
17 arrangement. We are not in the business of selling it  
18 ourselves. We have a marketing partner who takes the  
19 product from us and who sells that to the end users in  
20 the US market.

21 COMMISSIONER LANE: Okay, thank you.

22 Madam Chair, that's all I have.

23 CHAIRMAN ARANOFF: Commissioner Williamson?

24 COMMISSIONER WILLIAMSON: Thank you, Madam  
25 Chairman.

1                   Just one question for open session. You  
2 claim on page 24 of your brief that Japanese producer  
3 Perali (ph) would not be likely to export to the  
4 United States because it already has access to the US  
5 market via its subsidiaries in Germany and Singapore,  
6 and I was wondering, wouldn't revocation mean that  
7 they could then have the option of exporting directly  
8 to the US, as they were doing before the orders went  
9 into effect?

10                   MR. SHOR: Certainly they would have that  
11 option. I'm not sure I understand the --

12                   MR. FEAST: It's not clear to me, putting  
13 myself in their position, they obviously have the  
14 ability to export to the US market from Germany and  
15 from Singapore, and there is nothing that we can see  
16 that would make exporting to this market from Japan  
17 more attractive than exporting from those markets, so  
18 I don't see any reason why the lifting of these orders  
19 would cause exports from that region, when they  
20 weren't willing to export from the other places where  
21 they produced PVA.

22                   MR. SHOR: I guess our point was really that  
23 there would be no net impact on the US industry. If  
24 you are exporting to the US from Singapore and  
25 Germany, and you were to switch that volume to the --

1 even if you were to switch that volume to Japan, you  
2 would still end up in the same place. There would be  
3 no net impact on the US industry.

4 COMMISSIONER WILLIAMSON: Or if you find it  
5 advantageous to ship from three places rather than  
6 two, you'd do that too I guess.

7 MR. SHOR: But you are serving your  
8 customers. There is no reason to suspect it would  
9 increase. They could meet any increase now from  
10 Germany and Singapore.

11 COMMISSIONER WILLIAMSON: Okay. The other  
12 question I was just wondering, I guess the export --  
13 so the VAT rebate is off, now, you said?

14 MR. SHOR: The VAT rebate was reduced from  
15 13% to 5%.

16 COMMISSIONER WILLIAMSON: But the Chinese  
17 could push it back up if they suddenly want to push  
18 more export out, is that correct?

19 MR. SHOR: That's entirely speculative.

20 COMMISSIONER WILLIAMSON: But I mean, isn't  
21 the pattern that they have been doing up and down?

22 MR. SHOR: No, the pattern has been that  
23 they reduced it. That was one movement.

24 MR. FEAST: The pattern in Germany has been  
25 that these export -- what essentially amount to export

1 subsidies or encouragements for exports have been  
2 reduced. The Chinese have sought to develop more a  
3 focus on their own economy rather than export-led  
4 economic growth.

5 COMMISSIONER WILLIAMSON: Okay. The reason  
6 I am raising the question is that now, as their own  
7 economy has slowed down, is there a possibility they  
8 may take a different view?

9 MR. BOLTUCK: I might just mention that Mr.  
10 Greenwald said this morning that these export-led  
11 Asian economies don't engage in any stimulus, and  
12 that's not true. In China now, they are suffering a  
13 recession just as we are, and they have a government  
14 program to spend \$500 billion on stimulus, so they are  
15 trying to develop their -- and they are going to, just  
16 as we are going to restructure and reorient our  
17 economy in the wake of the recession, they are going  
18 to do the same with theirs in a matching way.

19 COMMISSIONER WILLIAMSON: Which could mean  
20 the VAT rebate --

21 MR. BOLTUCK: I have no evidence that it's  
22 even under discussion.

23 COMMISSIONER WILLIAMSON: No, it's just,  
24 given what was changing there, I wasn't sure you could  
25 discount it entirely.

1 MR. SHOR: There is no evidence whatsoever.

2 MR. FEAST: Given the political environment  
3 now, I think it would be about as politically  
4 advisable as devaluing the yuan.

5 COMMISSIONER WILLIAMSON: Okay, anyway.  
6 Okay, good. That's all the questions I have now.  
7 Thank you.

8 CHAIRMAN ARANOFF: Commissioner Pinkert?

9 COMMISSIONER PINKERT: I have nothing  
10 further for this session.

11 CHAIRMAN ARANOFF: Okay, my turn. I wanted  
12 to re-ask a few of the questions that I asked this  
13 morning about contracting practices. Do DuPont and  
14 Celanese usually bid against each other for your  
15 business? How does that work? Do you put all your  
16 business out at the same time for a multi-year  
17 contract?

18 MR. BEREZO: Maybe we can just talk about  
19 that in the closed session. We can give you the  
20 answer. I'd rather not talk about it specifically in  
21 an open session. What we don't do, and have not done,  
22 is run an RFP process or something like that. I mean,  
23 for the US business, there are only two suppliers. We  
24 have conversations with them. Contracts go when they  
25 expire, and then well in advance of the expiration

1 date, we talk about the next turn and that sort of  
2 thing. So it's more of a negotiation, as opposed to a  
3 bid.

4 CHAIRMAN ARANOFF: Okay. I am just going to  
5 go through a couple facts that I want to know, and  
6 maybe you will be able to answer them in the  
7 confidential session, although we won't have the  
8 witnesses present, we will only have the lawyers and  
9 economists present, so this may have to be in your  
10 post-hearing.

11 MR. BEREZO: Okay.

12 CHAIRMAN ARANOFF: But I am trying to figure  
13 out, I mean, I guess what I really would like to do is  
14 see the terms of the contract that you have entered  
15 into with the two domestic suppliers over the period  
16 of review and since that time up until the present;  
17 how much volume, at what price, at what time --

18 MR. BEREZO: Okay.

19 CHAIRMAN ARANOFF: -- so that I can take a  
20 look at whether those were head-to-head, how the  
21 amount of volume between the two suppliers has  
22 shifted, how the prices have changed over time. It's  
23 just really hard to visualize this kind of non-  
24 transparent contracting process in this industry.  
25 It's much, much easier in industries where a request

1 for quotes goes out and, you know, 15 people bid and  
2 you can look at them and compare them.

3 MR. BEREZO: Sure.

4 CHAIRMAN ARANOFF: So whatever you can  
5 provide me with in detail on that I think would be  
6 really helpful.

7 MR. BEREZO: We'll do everything we can.

8 CHAIRMAN ARANOFF: Okay, thanks. And the  
9 other question that I had, and again, this may just  
10 require a confidential response, is, during the period  
11 where domestic supply was short and you were not able  
12 to get everything that you wanted when you wanted it  
13 in 2007 and parts of 2008, I guess it seemed to me  
14 that you had sort of a hierarchy of bad choices of  
15 things that you could do instead of getting supply  
16 from your domestic suppliers when you wanted it, and  
17 it would be helpful to me to have your explanation on  
18 the confidential record of why you went with the  
19 choice that you went with, which was basically to kind  
20 of wait around and hope that the domestic supply was  
21 going to come through.

22 I know you said you went to some non-subject  
23 producers and tried to look into whether that was  
24 available. You know, other choices might have been to  
25 buy the subject product anyway and pay the duties, to

1 look at US product that might be out of specification,  
2 to look at shutting down part of your PVB production  
3 for some period of time, and I guess I am interested  
4 in the economics of, between all those bad choices,  
5 how you ended up where you did.

6 MR. BEREZO: Yes, I think we could provide  
7 that after the fact and maybe talk a little bit about  
8 the economics, but I think one of the things you have  
9 to think about, just in terms of context and in the  
10 moment, at that time, the question is, what  
11 information are you getting from your suppliers on how  
12 long the outage will last. What should the  
13 expectation be, because of course, you don't want to  
14 have to make expensive choices when you may not have  
15 to.

16 And so, there is just a little bit of  
17 context there on the decision making process. It  
18 wasn't as if we were, you know, just waiting around  
19 for something really good to happen. Hope is not our  
20 strategy, but were working on the best information we  
21 had at the time.

22 CHAIRMAN ARANOFF: Okay, because I know you  
23 talked about, for example, the fact that having off-  
24 shore suppliers increases your time along your supply  
25 chain and creates uncertainties, and so --

1           MR. BEREZO: It does, and you have to give  
2 that a month. I mean, you have to say, I need to make  
3 this choice at least a month in advance for some off-  
4 shore supply to be here, and if you can avoid that,  
5 you do, but you have to decide when, and so you are  
6 either making a choice that you just overpaid, you  
7 just bought material you didn't make, or you saved  
8 yourself, and you just have to judge based on the  
9 information you are getting, how to make that choice.

10           CHAIRMAN ARANOFF: Okay, and this is a  
11 question for both Solutia and for DuPont and Celanese,  
12 but one of the things I am trying to understand is  
13 whether, when DuPont and Celanese make sales to  
14 Solutia or to anybody else who is making PVB with the  
15 product, whether they have to balance those sales with  
16 sales of less exacting grades of the product in order  
17 to maximize production in the facility, and I am  
18 wondering if that bears any relation to the fact that  
19 Solutia is claiming that it is paying higher prices  
20 now even though, you know, perhaps to make up for the  
21 fact that the customers for that other part of the  
22 production have kind of dried up.

23           Is that part of the explanation of what's  
24 going on?

25           MR. BEREZO: Yes, I mean, I think you would

1 have to get, certainly, an explanation from them, but  
2 based on what we have heard from them, it is a fact  
3 that our material processes longer, it takes longer to  
4 process. It takes longer to make, requires more of  
5 their productive capacity, and we pay a premium as a  
6 result.

7 CHAIRMAN ARANOFF: Okay.

8

9 CHAIRMAN ARANOFF: The only other thing that  
10 I had asked this morning that I didn't know if you had  
11 any additional information on was the issue of the  
12 antidumping case in Europe.

13 MR. SHOR: I think that's covered in our  
14 brief. I forget the exact dates, but sometime around  
15 mid-to-late 2007, there were preliminary antidumping  
16 duties imposed in Europe, and I believe they were  
17 lifted in March of 2008, but the details are in our  
18 brief on when the preliminary duties went in and when  
19 they came off. There was a negative injury  
20 determination in that case --

21 CHAIRMAN ARANOFF: Okay.

22 MR. SHOR: -- as there should be here.

23 CHAIRMAN ARANOFF: Okay. I read what was in  
24 your brief, but I guess I just was not able to process  
25 all of it and get to that point, so thank you for the

1 clarification. With that, I don't think I have any  
2 further questions.

3 Commissioner Lane, do you have any other  
4 questions?

5 (No response.)

6 CHAIRMAN ARANOFF: Any other commissioners?

7 (No response.)

8 CHAIRMAN ARANOFF:

9 Do the staff have any questions for this  
10 panel?

11 MS. ALVES: Yes, Madam Chairman. This is  
12 Mary Jane Alves from the General Counsel's Office. I  
13 have two quick questions.

14 First, if you could identify by name the  
15 other firms that produce PVB products in the global  
16 market. It sounds, from Solutia's testimony today, as  
17 though there are relatively few such producers. You  
18 mentioned two, in particular, in Japan. If you could,  
19 along with identifying the names of those PVB  
20 producers globally, identify whether any of them is  
21 affiliated with a PVA producer.

22 My second question is also for Solutia, but  
23 DuPont and Celanese are also welcome to answer it as  
24 well.

25 Does Solutia purchase PVA from DuPont's or

1 Celanese's U.S. operations for use in its European  
2 facility?

3 MR. BEREZO: I can answer the second one  
4 first because it's pretty easy, and that is, yes, we  
5 purchase PVA from a U.S. producer for use in our  
6 European operations.

7 Do you want to handle the one, Tim, on who  
8 the PVB producers are? I think I can get them, but --

9 MR. FEAST: There are four major PVB  
10 producers in the world: Solutia, DuPont, Sakasui and  
11 Crerrari. I think all four of those names have come  
12 up at some point today.

13 There are also producers emerging in China.  
14 Kingboard is probably the largest PVB producer in  
15 China, and there are a lot of smaller producers of PVB  
16 in China whose names I won't pretend to be able to  
17 pronounce, spell, or remember. But the major players  
18 on the world market are the four I mentioned --  
19 Solutia, DuPont, Sakasui and Crerrari -- and, within  
20 China, Kingboard is a fifth. Chang Chung in Taiwan  
21 also produces PVB, so if you're looking for a complete  
22 list of PVB producers, they are a major player  
23 upstream, although their volume sales of PVB, we don't  
24 believe, are that large at this stage.

25 In terms of PVA production, DuPont, you

1 already know about. Crerrari clearly is integrated  
2 upstream. Sakasui, we believe, is not integrated  
3 upstream into PVA. Kingboard is integrated upstream  
4 into PVA, although I'm not sure of the status of that  
5 plant startup, whether it's running today or whether  
6 it isn't, but, clearly, they are building a plant to  
7 integrated into PVA. Chang Chung is integrated  
8 upstream. So the majority of the players are  
9 integrated backwards into PVA.

10 MR. CORKRAN: Douglas Corkran, Office of  
11 Investigations. Thank you, Chairman Aranoff. The  
12 staff has no further questions.

13 CHAIRMAN ARANOFF: Mr. Greenwald, do you  
14 have any questions for this panel?

15 MR. GREENWALD: We do not.

16 CHAIRMAN ARANOFF: Okay. I believe we are  
17 now going to go into the first part of our closed  
18 session.

19 I want to thank this panel very much for  
20 your answers to all of our questions this afternoon.  
21 It's been very helpful, and we appreciate your taking  
22 the day off to join us.

23 Madam Secretary, we now need to clear the  
24 room.

25 MS. ABBOTT: Yes, Madam Chairman. If all of

1 the persons who have not identified themselves to me  
2 as being in the closed session would please leave, it  
3 would be appreciated.

4 (Whereupon, the proceedings went into  
5 confidential session.)

1                   O P E N S E S S I O N

2                   CHAIRMAN ARANOFF: The time remaining, the  
3                   Petitioners have 21 minutes remaining. That includes  
4                   16 minutes of rebuttal time, plus five minutes for  
5                   closing. And Solutia has 14 minutes remaining, nine  
6                   for rebuttal and five for closing.

7                   We'd normally just combine those, unless  
8                   there's any objection.

9                   MR. GREENWALD: Madame Chairman, I think it  
10                  is our joint wish not to burden you beyond brief  
11                  closing statements.

12                 CHAIRMAN ARANOFF: Does that mean that you  
13                  would like to forfeit the time above your five  
14                  minutes? Or just that you hope that you won't use all  
15                  your time?

16                 MR. GREENWALD: Depends in part on what the  
17                  other side says.

18                 MR. SHOR: I think we're willing to settle  
19                  for three minutes each.

20                 MR. GREENWALD: We are. Do you want to go  
21                  first?

22                 CHAIRMAN ARANOFF: I believe that we  
23                  normally have the Petitioner's closing first.

24                 MR. GREENWALD: I was afraid of that.

25                  (Laughter.)

1                   CHAIRMAN ARANOFF: Well, Madame Secretary,  
2 we won't hold them to three minutes, but we'll just  
3 hope that they come in under the 21. Although you are  
4 perfectly entitled to our attention for 21 minutes, if  
5 you wish it.

6                   MR. GREENWALD: The temptation to get your  
7 undivided attention for 21 minutes is almost  
8 irresistible.

9                   CHAIRMAN ARANOFF: I can't guarantee  
10 undivided.

11                   (Laughter.)

12                   MR. GREENWALD: How about undivided for  
13 three, and we forfeit the rest?

14                   Let me give you a brief closing statement  
15 which, you know, I hope really is brief, that tries  
16 and summarizes what we have heard: where this case  
17 is, and what the nature of the testimony on both sides  
18 has been.

19                   I think the first point, and it is a point  
20 that one tends to forget with so much back-and-forth,  
21 is that our position to continuation of the orders,  
22 and the arguments for not continuing the order, are  
23 predicated on assertions about a small subpart -- not  
24 a small, let me be fair -- about 35 percent of the  
25 production of DuPont and Celanese. That is,

1 production of PVA for PVB uses.

2 The market, as you know, is much broader  
3 than that. And while there have been efforts on the  
4 part of counsel and counsel's economists for solution  
5 to comb the record to find things that they can  
6 usefully say about why the order won't lead to a  
7 significant increase into a significant price pressure  
8 caused by subject imports on the roughly 65 percent of  
9 the market that is not PVA production for PVB  
10 purposes, they haven't really succeeded in giving you  
11 any evidence.

12 And what I would like to do on those points  
13 is summarize really what the record shows. First, the  
14 record shows that, in terms of the condition of the  
15 U.S. industry and vulnerability, it has been rough  
16 going over the period of investigation. But that is  
17 not really the issue before you.

18 The question is, going forward, what's  
19 likely to happen over the next two, three years. And  
20 it seems to me that the testimony on the record is  
21 unequivocal; that there will be a significant drop in  
22 demand, and with that, significant consequences for  
23 the domestic industry. That is, the domestic industry  
24 is clearly, using Commission parlance, vulnerable.

25 Secondly, it seems to me incontrovertible

1 that all the evidence shows that there has been an  
2 expansion of capacity in subject countries; and that  
3 with the bottom dropping out of the global market,  
4 whatever anybody may say about a Chinese producer  
5 interested in exporting in the past, or a Korean  
6 exporting interested in exporting, or Japanese  
7 producers -- in fact, in the world in which we are  
8 now, there is an economic need that has not been  
9 contradicted to keep plants running at as high  
10 utilization as possible.

11 And to do that, if one has to look for  
12 export markets, that is what the economics drives  
13 producers to do, in Japan, in China, and in Korea.  
14 The idea that the Chinese, for example, under today's  
15 conditions, produce exclusively for the Chinese market  
16 is just unsustainable.

17 The third issue before you is, given the  
18 condition of the market looking forward, are there  
19 economic incentives to ship added PVA, or even offer  
20 to sell added quantities of PVA in the U.S. market at  
21 low prices. And there the evidence is  
22 incontrovertible; in fact, has not been contradicted.

23 What we have done in our presentation is  
24 give to you the best data on the record about pricing  
25 in third-country markets, both U.S. export pricing and

1 values and pricing data on the exports from each of  
2 the subject countries.

3 That's not perfect. It's not hard product-  
4 specific pricing data. But it is not only a fair  
5 reflection of what's going on on average in terms of  
6 what sells at what price, but the differentials  
7 between the data you have on export markets, third-  
8 country markets, and the data you have in the U.S.  
9 market, are too large to ignore.

10 So you have this combination of supply  
11 overseas, of demand dropping, and of pricing in the  
12 U.S. market that, by all the evidence, is relatively  
13 attractive. And that was consistent in testimony by  
14 both DuPont and Celanese.

15 And yet, Solutia once said that that will  
16 not lead producers of subject merchandise to look at  
17 the U.S. market, either in terms of -- and there will  
18 be no significant volume impact because the imports  
19 won't come, or there won't be significant price impact  
20 because the pricing won't affect U.S. market prices.  
21 That is not a credible position to take.

22 Lastly, let me make a reference to the 35  
23 percent of the U.S. market that the Solutia testimony  
24 does address in detail. And the question you have to  
25 ask yourself is, when all is said and done, is it

1 credible for you to believe that Solutia wants to  
2 access, as they said, security of supply without  
3 regard to the pricing of that supply. And is it  
4 credible to believe that if, for example, they can use  
5 a specific country that Solutia witnesses spoke of, if  
6 they get a supply arrangement with a Chinese producer,  
7 which appears to be their intention, is it really  
8 credible to say that there will be no subsequent  
9 pressure on U.S. producer prices, no matter what the  
10 price the Chinese producer offers.

11 I don't think that is a credible position  
12 for them to take, much less for the Commission to  
13 take. What you are charged with doing is making  
14 reasonable projections into the future. And no matter  
15 what Solutia may say about its interests and  
16 intentions, I don't think on this record you can make  
17 a reasonable projection into the future that  
18 revocation of these orders will not lead to harm, at  
19 least the same sort of harm that led to the imposition  
20 of the orders in the first place, either through  
21 volume or through pricing.

22 Thank you.

23 MR. SHOR: Good evening. My clients were  
24 ready to leave at 5:15, so I'll be brief so they don't  
25 leave without me.

1           The domestic industry has all but conceded  
2           that it has no case based on the data you've gathered  
3           through the end of the third quarter, 2008. They  
4           admitted that they were producing a full capacity in  
5           2007 and 2008. They admitted that supply was tight  
6           worldwide; that there would be no vulnerability, and  
7           no likelihood of increased exports, because there was  
8           no excess capacity worldwide.

9           So the case comes down to the fourth quarter  
10          and 26 days of January in 2008. That's a thin reed on  
11          which to base a five-year period of review,  
12          particularly since it is the fourth quarter. And it's  
13          a fourth quarter that had problems.

14          We know that DuPont had a production outage  
15          due to Hurricane Ike throughout the fourth quarter  
16          that they want you to rely on. So how are you  
17          supposed to waive the fact that production and  
18          shipments were down, when one of the two U.S.  
19          manufacturers assigned to the merchant market were not  
20          producing what it can?

21          And the fourth quarter is highly unusual for  
22          a variety of other factors. At the end of the year  
23          it's the holiday period. A lot of manufacturers, both  
24          in the United States and abroad, shut down production  
25          for the holidays and for other periods of time. The

1 auto makers shut down their plants for a month. So  
2 it's hardly a predictor of the state of the economy or  
3 of the industry going forward, because it bears the  
4 brunt of all those factors.

5 It can't be the case that there can never be  
6 a revocation in a sunset review during a recession.  
7 That's essentially the domestic industry's argument.  
8 That in a recession, assume the worst; we don't know  
9 when we'll get out of the recession, it's going to be  
10 long and deep, so you can't possibly consider  
11 revocations during recessions. That's not the way the  
12 statute is written.

13 The statute tells you to consider that the  
14 condition of the domestic industry, in the context of  
15 the business cycle. That doesn't mean that they win  
16 every time there's a recession. It means you have to  
17 weigh the downturn and the recession against what  
18 conditions will be like in the eventual upturn.

19 The key to this case, I think, is in  
20 thinking about causation. All the domestic industry  
21 has really argued is that they are vulnerable due to a  
22 recession, and they will be injured as a result of  
23 that recession. They really haven't told a story of  
24 why subject imports will be the cause of the injuries  
25 they contend they will suffer.

1           Why do I say that? Ask yourselves several  
2 things they have not explained in this case. DuPont  
3 and Celanese cannot explain why subject imports  
4 declined over the period 2000 to 2002. That was a  
5 period before the orders were in place. There was no  
6 discipline resulting from the orders. There was no  
7 recession. And yet imports declined.

8           They also can't explain why their market  
9 share did not increase following the imposition of the  
10 orders in 2003 or 2004. That's not, as Mr. Greenwald  
11 would characterize it, looking at a limited segment of  
12 the market focusing just on just PVB; that's looking  
13 at the entire market. Their market share did not  
14 increase.

15           They also cannot explain why prices in the  
16 U.S. market did not increase in 2003 and 2004. Again,  
17 that's not just looking at the 35 percent of the  
18 market accounted for by PVB; that's looking at the  
19 entire market. Prices did not increase in the  
20 merchant market on an average-unit basis, and they did  
21 not increase in any of the four product comparisons  
22 for which you have pricing data from both periods of  
23 investigation. They can't explain that.

24           The explanation, I submit, is that these  
25 orders have not succeeded in eliminating, if you will,

1 the effects of global supply and demand on the  
2 domestic industry, nor can they. There are two big  
3 holes, one of the holes caused by non-subject imports  
4 which flooded in the market, exposing the U.S.  
5 industry to the global forces of supply and demand,  
6 and the other is the export hole. The U.S. industry  
7 is a large exporter, so either way they would still  
8 have been subject to the forces of supply and demand,  
9 not just in the United States, but globally. And  
10 that's why, as demand picked up and supply tightened  
11 in 2005, and most vehemently in 2007 and 2008, they  
12 reached capacity. They raised prices. Things got  
13 better for them, not because of the orders, but  
14 because the economy improved.

15 And correspondingly, things got worse in  
16 2008, when the economy got worse, not when anything  
17 that was a result of subject imports.

18 Finally, the last thing they haven't even  
19 tried to explain, or provided any kind of coherent  
20 story for, is why they think that the volume of  
21 subject imports that they expect would occur on  
22 termination of the orders would not replace non-  
23 subject imports. There is an assumption in their  
24 whole analysis that every pound of PVA that comes in  
25 from China or Japan or Korea would displace U.S.

1 production. They forgot about Taiwan, they forgot  
2 about Germany, they forgot about Singapore. They  
3 forgot about what happened after the orders were in  
4 place.

5           What you heard from Solutia, and what the  
6 other evidence reveals, is that PVA is a vital input  
7 to several products. Customers do not come out and buy  
8 and large buy on an on-the-spot basis. Security of  
9 supply is important. It is a critical factor. It is  
10 a factor causing producers to lock in multiple  
11 suppliers.

12           On that basis, no rational purchaser is  
13 going to buy from a Chinese producer for six months;  
14 and then, when his eventual upturn comes and demand is  
15 tight again, be locked out of any supply because the  
16 Chinese supplier decides to sell again in its own  
17 market. They're going to look to their long-term  
18 suppliers; they want long-term contracts. That's how  
19 this market works. And there's nothing to indicate  
20 that there's going to be a short-term shift to Chinese  
21 or Japanese or Korean suppliers simply to take  
22 advantage of short-term demand manufacturers.

23           Thank you very much.

24           CHAIRMAN ARANOFF: Well, thank you to all of  
25 the participants in today's hearing. I think we have

1 all learned a lot, and we appreciate everyone taking  
2 this much time to spent with us and answer our  
3 questions.

4 I hope that everyone has a safe trip  
5 wherever you are heading this evening. And with that,  
6 this hearing is adjourned.

7 (Whereupon, at 5:40 p.m., the hearing in the  
8 above-entitled matter was concluded.)
